The fact that it runs without an active internet connection is an incredible comfort for users who don't have access to the internet all the time.

## CWNP CWSP-208 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>• Security Lifecycle Management: This section of the exam assesses the performance of a Network Infrastructure Engineer in overseeing the full security lifecycle—from identifying new technologies to ongoing monitoring and auditing. It examines the ability to assess risks associated with new WLAN implementations, apply suitable protections, and perform compliance checks using tools like SIEM. Candidates must also demonstrate effective change management, maintenance strategies, and the use of audit tools to detect vulnerabilities and generate insightful security reports. The evaluation includes tasks such as conducting user interviews, reviewing access controls, performing scans, and reporting findings in alignment with organizational objectives.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• Security Policy: This section of the exam measures the skills of a Wireless Security Analyst and covers how WLAN security requirements are defined and aligned with organizational needs. It emphasizes evaluating regulatory and technical policies, involving stakeholders, and reviewing infrastructure and client devices. It also assesses how well high-level security policies are written, approved, and maintained throughout their lifecycle, including training initiatives to ensure ongoing stakeholder awareness and compliance.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• WLAN Security Design and Architecture: This part of the exam focuses on the abilities of a Wireless Security Analyst in selecting and deploying appropriate WLAN security solutions in line with established policies. It includes implementing authentication mechanisms like WPA2, WPA3, 802.1X EAP, and guest access strategies, as well as choosing the right encryption methods, such as AES or VPNs. The section further assesses knowledge of wireless monitoring systems, understanding of AKM processes, and the ability to set up wired security systems like VLANs, firewalls, and ACLs to support wireless infrastructures. Candidates are also tested on their ability to manage secure client onboarding, configure NAC, and implement roaming technologies such as 802.11r. The domain finishes by evaluating practices for protecting public networks, avoiding common configuration errors, and mitigating risks tied to weak security protocols.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Vulnerabilities, Threats, and Attacks: This section of the exam evaluates a Network Infrastructure Engineer in identifying and mitigating vulnerabilities and threats within WLAN systems. Candidates are expected to use reliable information sources like CVE databases to assess risks, apply remediations, and implement quarantine protocols. The domain also focuses on detecting and responding to attacks such as eavesdropping and phishing. It includes penetration testing, log analysis, and using monitoring tools like SIEM systems or WIPS</li> <li>• WIDS: Additionally, it covers risk analysis procedures, including asset management, risk ratings, and loss calculations to support the development of informed risk management plans.</li> </ul>

## CWSP-208 Reliable Test Duration - CWSP-208 Test Certification Cost

Time is very important for everyone. As the saying goes, time is life so spend it wisely. We believe that you also don't want to spend much time on preparing for your Certified Wireless Security Professional (CWSP) exam. How can you pass your exam and get your certificate in a short time? Our CWSP-208 exam torrent will be your best choice to help you achieve your aim. According to customers' needs, our product was revised by a lot of experts; the most functions of our Certified Wireless Security Professional (CWSP) exam dumps are to help customers save more time, and make customers relaxed. If you choose to use our CWSP-208 Test Quiz, you will find it is very easy for you to pass your exam in a short time. You just need to spend 20-30 hours on studying; you will have more free time to do other things.

## CWNP Certified Wireless Security Professional (CWSP) Sample Questions (Q109-Q114):

### NEW QUESTION # 109

The IEEE 802.11 standard defined Open System authentication as consisting of two auth frames and two assoc frames. In a WPA2-Enterprise network, what process immediately follows the 802.11 association procedure?

- A. Passphrase-to-PSK mapping
- B. 802.1X/EAP authentication
- C. RADIUS shared secret lookup

- D. 4-Way Handshake
- E. Group Key Handshake
- F. DHCP Discovery

**Answer: B**

Explanation:

In WPA2-Enterprise:

After successful Open System authentication and 802.11 association, the next step is 802.1X/EAP authentication via EAPOL frames.

This phase establishes user identity and derives the PMK.

Incorrect:

- A). Group Key Handshake comes after the 4-Way Handshake.
- C). DHCP occurs after authentication and key negotiation.
- D). 4-Way Handshake follows successful 802.1X authentication.
- E). PSK mapping applies to WPA2-Personal, not Enterprise.
- F). The RADIUS shared secret is pre-configured between authenticator and RADIUS server-not part of real-time negotiation.

**NEW QUESTION # 110**

What field in the RSN information element (IE) will indicate whether PSK- or Enterprise-based WPA or WPA2 is in use?

- A. Pairwise Cipher Suite List
- B. RSN Capabilities
- **C. AKM Suite List**
- D. Group Cipher Suite

**Answer: C**

Explanation:

The AKM (Authentication and Key Management) Suite List field within the RSN Information Element defines which authentication methods are supported by the AP. This field distinguishes between PSK (Pre-Shared Key) and Enterprise (802.1X) modes:

AKM Suite OUI 00-0F-AC:1 = WPA2-Personal (PSK)

AKM Suite OUI 00-0F-AC:2 = WPA2-Enterprise (802.1X)

By examining this field in Beacon or Probe Response frames, a protocol analyzer can determine the authentication method enforced by the BSS.

**NEW QUESTION # 111**

Given: You must implement 7 APs for a branch office location in your organization. All APs will be autonomous and provide the same two SSIDs (CORP1879 and Guest).

Because each AP is managed directly through a web-based interface, what must be changed on every AP before enabling the WLANs to ensure proper staging procedures are followed?

- A. Cell radius
- **B. Administrative password**
- C. Output power
- D. Fragmentation threshold

**Answer: B**

Explanation:

For security and proper management, each autonomous AP must have:

A unique, non-default administrative password.

This ensures attackers cannot guess login credentials and access AP settings.

Especially critical when managing via web interface, which may expose login portals to the local network.

Incorrect:

- A). Fragmentation threshold is rarely adjusted except for special performance tuning.
- C & D. Output power and cell radius settings are adjusted during RF design, but they don't relate to staging /security directly.

### NEW QUESTION # 112

Given: You have implemented strong authentication and encryption mechanisms for your enterprise 802.11 WLAN using 802.1X/EAP with AES-CCMP.

For users connecting within the headquarters office, what other security solution will provide continuous monitoring of both clients and APs with 802.11-specific tracking?

- A. IPSec VPN client and server software
- B. Wireless intrusion prevention system**
- C. RADIUS proxy server
- D. Internet firewall software
- E. WLAN endpoint agent software

#### Answer: B

Explanation:

In integrated WIPS systems, radios are shared between client servicing and security scanning. To maintain quality of service for latency-sensitive applications such as VoWiFi (Voice over Wi-Fi), scanning operations may be temporarily suspended or deprioritized, potentially reducing security monitoring during those periods.

### NEW QUESTION # 113

You perform a protocol capture using Wireshark and a compatible 802.11 adapter in Linux. When viewing the capture, you see an auth req frame and an auth rsp frame. Then you see an assoc req frame and an assoc rsp frame. Shortly after, you see DHCP communications and then ISAKMP protocol packets. What security solution is represented?

- A. WPA2-Personal with AES-CCMP
- B. EAP-MD5
- C. 802.1X/PEAPv0/MS-CHAPv2
- D. Open 802.11 authentication with IPSec**
- E. 802.1X/EAP-TTLS

#### Answer: D

Explanation:

The frame sequence described shows:

802.11 Open System authentication and association

DHCP communication (for IP configuration)

ISAKMP packets, which are part of IPSec (used for key exchange and tunnel negotiation) This indicates that link-layer authentication is not used, but instead, higher-layer encryption (IPSec VPN) secures communications.

Incorrect:

- A and C. Would show EAP negotiation and 802.1X authentication frames.
- D). WPA2-Personal would include a 4-Way Handshake before DHCP.
- E). EAP-MD5 does not involve ISAKMP and is used within 802.1X authentication.
