Get WGU Web-Development-Applications Dumps Questions [] To Gain Brilliant Result

Are you still looking for Web-Development-Applications exam materials? Don't worry about it, because you find us, which means that you've found a shortcut to pass Web-Development-Applications certification exam. With research and development of IT certification test software for years, our Exam4Docs team had a very good reputation in the world. We provide the most comprehensive and effective help to those who are preparing for the important exams such as Web-Development-Applications Exam.

WGU Web-Development-Applications Exam Syllabus Topics:

Topic	Details
Topic 1	• Validation, Testing, and Form Development: This section of the exam measures skills of Web Developers and covers the ability to validate code, test web pages for accuracy, and build form components. It includes understanding how to detect errors, ensure compliance with standards, and implement form fields with inline validation to improve user experience. The focus is on creating forms that work reliably, meet usability expectations, and maintain proper data entry flow.

Topic 2	• Creating Adaptive Web Documents and Pages: This section of the exam measures skills of Front-End Designers and covers the techniques needed to make websites display correctly across traditional desktops and mobile devices. It emphasizes adaptive page layout, flexible formatting, and user-friendly presentation so that content remains readable and functional on screens of different sizes. Candidates are expected to show an understanding of how to create consistent designs that respond smoothly to device changes.
Topic 3	• HTML5, CSS3, and JavaScript Foundations: This section of the exam measures skills of Web Developers and covers the essential ability to manually code using HTML5, CSS3, and JavaScript to create structured, visually styled, and interactive web content. It focuses on building accurate page layouts, applying modern styling rules, and writing basic scripts that support user interaction. The aim is to ensure candidates can construct professional web documents using current standards and properly integrate all three technologies.
Topic 4	• Responsive Web Design (RWD) for Browsers and Apps: This section of the exam measures skills of Front-End Designers and covers concepts related to mobile-first layout planning, responsive frameworks, and techniques used to ensure compatibility with modern browsers and applications. Candidates must demonstrate how to adjust elements for better usability on mobile devices and apply responsive strategies that allow a single design to function seamlessly across various environments.

Web-Development-Applications Valid Learning Materials & Web-Development-Applications Exam Blueprint

Exam4Docs almost aimed to meet the needs of all candidates who want to pass the Web-Development-Applications exam. If someone who don't have enough time to prepare for their exam, our website provide they with test answers which only need 20-30 hours to grasp; If someone who worry about failed the Web-Development-Applications Exam, our website can guarantee that they can get full refund. In summary, the easiest way to prepare for Web-Development-Applications certification exam is to complete Web-Development-Applications study material.

WGU Web Development Applications Sample Questions (Q126-Q131):

NEW QUESTION # 126
Which property should a developer use to ensure that a background image appears only once?

- A. background-clip
- B. background-repeat
- C. background-size
- D. background-origin

Answer: B

Explanation:
> "The `background-repeat` property in CSS defines how background images are repeated. To prevent a background image from repeating, use `background-repeat: no-repeat;`."
>
> "The default value is `repeat`, which tiles the image both horizontally and vertically unless otherwise specified." References:
* MDN Web Docs: background-repeat
* CSS Backgrounds and Borders Module

NEW QUESTION # 127
Which navigation structure should a developer use on a mobile website?

- A. One page should contain all the content with navigation to areas on that page.

- B. Each page should contain related content with navigation to other content.
- C. The site should favor content over navigation.
- D. The site should use navigation to reach most content.

Answer: A

Explanation:
> "On mobile devices, using a single-page layout with navigation to anchors or sections (via internal links) minimizes load times and improves usability."
>
> This structure avoids excessive clicking and page loads, which are disruptive on smaller screens.
References:
* MDN Web Docs: Mobile Site Best Practices
* UX Design for Mobile Devices

Here are the verified and correctly formatted answers for Questions 67 through 70 using your specified format:

NEW QUESTION # 128
What is the term for a JavaScript function that is defined as part of an object?

- A. Method
- B. Value
- C. Property
- D. Event

Answer: A

Explanation:
> "A method is a function property of an object. In JavaScript, when a function is assigned as a property of an object, it is called a method of that object."
>
> Example:
```javascript
const person = {
greet: function() {
return "Hello!";
}
};
```
> In the above, `greet` is a method of the `person` object.
References:
* MDN Web Docs: Working with Objects - Methods
* JavaScript Reference: Functions in objects

NEW QUESTION # 129
Which code segment places text to the right of an image whose file name is `blue.png`?

- A. `<img src="images/blue.png" style="float: left; margin: 5px;" />`
- B. `<img src="blue.png/images" style="float: left; margin: 5px;" />`
- C. `<img src="images/blue.png" style="float: right; margin: 5px;" />`
- D. `<img src="blue.png/images" style="float: right; margin: 5px;" />`

Answer: A

Explanation:
> "When using `float: left` on an image, the image aligns to the left, allowing subsequent inline content (such as text) to flow on the right side of the image."

>
> "The syntax `src="images/blue.png"` assumes the image is located in the 'images' directory. A path such as `src="blue.png/images"` is incorrect and would result in a broken image." So, option B is correct both in terms of syntax and intended behavior.
References:
* MDN Web Docs: float property
* W3C HTML5 Specification: <img> element and image paths

NEW QUESTION # 130
Which characters are used to enclose multiple statement in a function?

- A. Parentheses
- B. Semicotons
- C. Spaces
- D. Curly braces

Answer: D

Explanation:
In JavaScript, curly braces{}are used to enclose multiple statements in a function, defining the block of code to be executed.
* Curly Braces: Curly braces{}are used to group multiple statements into a single block. This is necessary for defining the body of a function, loops, conditional statements, and other control structures.
* Usage Example:
function greet(name) {
let greeting = "Hello, " + name;
console.log(greeting);
}
In this example, the curly braces enclose the statements that form the body of thegreetfunction.
