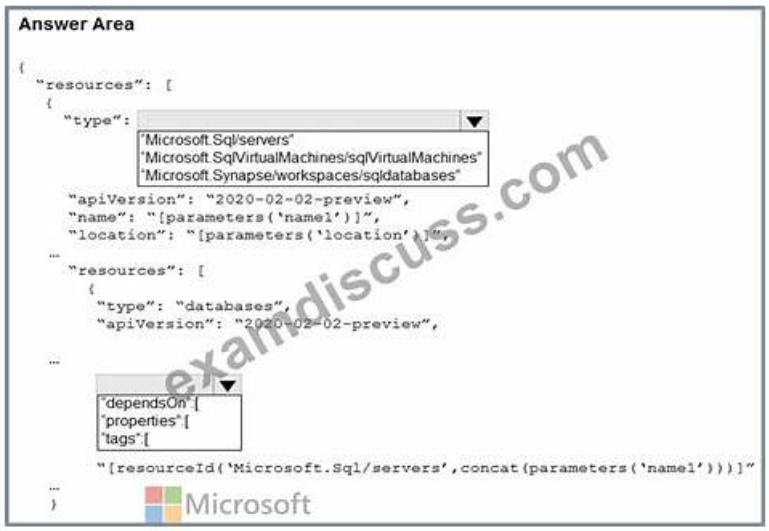
Exam Dumps Analytics-Arch-201 Free | Analytics-Arch-201 Exam Price



BONUS!!! Download part of LatestCram Analytics-Arch-201 dumps for free: https://drive.google.com/open?id=1yUuEzCYIojhrWEt8cRbMIo12zPWT9Mzl

To find the perfect Analytics-Arch-201 practice materials for the exam, you search and re-search without reaching the final decision and compare advantages and disadvantages with materials in the market. With systemic and methodological content within our Analytics-Arch-201 practice materials, they have helped more than 98 percent of exam candidates who chose our Analytics-Arch-201 guide exam before getting the final certificates successfully.

Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.
Topic 2	• Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.
Topic 3	• Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.

Analytics-Arch-201 Exam Price & Analytics-Arch-201 Reliable Exam Sample

New developments in the tech sector always bring new job opportunities. These new jobs have to be filled with the Salesforce Certified Tableau Architect (Analytics-Arch-201) certification holders. So to fill the space, you need to pass the Salesforce Certified Tableau Architect (Analytics-Arch-201) exam. Earning the Salesforce Certified Tableau Architect (Analytics-Arch-201) certification helps you clear the obstacles you face while working in the Salesforce field. To get prepared for the Salesforce Certified Tableau Architect (Analytics-Arch-201) certification exam, applicants face a lot of trouble if the study material is not updated. They are using outdated materials resulting in failure and loss of money and time.

Salesforce Certified Tableau Architect Sample Questions (Q68-Q73):

NEW QUESTION # 68
A large organization plans to consolidate several Tableau Server instances into a single server. What is the most important consideration to ensure a successful consolidation?

- A. Consolidating all servers simultaneously to minimize the transition period
- B. Focusing solely on the technical aspects and not on the user impact of consolidation
- C. Immediately decommissioning all other servers before starting the consolidation process
- D. Thoroughly planning the integration of data sources, user permissions, and content from each server

Answer: D

Explanation:
Thoroughly planning the integration of data sources, user permissions, and content from each server Careful planning of how to integrate data sources, user permissions, and content is crucial to ensure that all elements function cohesively in the new consolidated server, minimizing disruptions to users and business operations. Option A is incorrect because consolidating all servers simultaneously can be overwhelming and may lead to significant issues. Option C is incorrect as neglecting the impact on users can result in access issues and dissatisfaction. Option D is in-correct because decommissioning other servers before consolidation can disrupt ongoing operations and access to data.

NEW QUESTION # 69
An organization is planning to migrate from Tableau Cloud to an on-premises Tableau Server. Which aspect is most critical to ensure a successful migration?

- A. Immediately discontinuing Tableau Cloud before starting the migration
- B. Prioritizing the migration of visualizations, irrespective of data source compatibility
- C. Ensuring compatibility of data sources and security protocols between Tableau Cloud and Tableau Server
- D. Migrating all users to Tableau Server without prior testing

Answer: C

Explanation:
Ensuring compatibility of data sources and security protocols between Tableau Cloud and Tableau Server This approach focuses on the compatibility of data sources and security protocols, which are critical for ensuring that the migrated environment functions correctly and securely. Option A is incorrect because discontinuing Tableau Cloud before starting the migration can lead to data and service disruptions. Option C is incorrect as migrating all users without testing can result in unforeseen issues impacting user experience and data integrity. Option D is incorrect be-cause the migration of visualizations should be prioritized only after ensuring data source compatibility.

NEW QUESTION # 70
When verifying the installation of Tableau Server on a Windows system, what is important to check to ensure that file system permissions are correctly configured?

- A. The network settings to ensure Tableau Server can communicate with other systems
- B. The security permissions of the Tableau Server data and logs directories
- C. The amount of free disk space on the drive where Tableau Server is installed
- D. The version of the file system used on the Tableau Server installation drive

Answer: B

Explanation:
The security permissions of the Tableau Server data and logs directories After installing Tableau Server on Windows, it's important to check the security permissions of the data and logs directories of Tableau Server. Proper permissions are necessary to ensure that Tableau Server can access and manage its files effectively, without encountering access-related errors. Option A is incorrect because the amount of free disk space, while important for operation, does not impact the permissions set on the file system. Option B is incorrect as network settings, while crucial for connectivity, are not related to file system permissions for the Tableau Server directories. Option D is incorrect because the version of the file system, while important for overall compatibility, does not directly impact the permissions set on the Tableau Server directories.

NEW QUESTION # 71
During the troubleshooting of Kerberos authentication issues in Tableau Server, what is a common area to investigate?

- A. The configuration of Service Principal Names (SPNs) for the Tableau Server
- B. The frequency of synchronization between Tableau Server and the domain controller
- C. The network speed between the client machines and the Tableau Server
- D. The compatibility of the Kerberos protocol with the web browser used by clients

Answer: A

Explanation:
The configuration of Service Principal Names (SPNs) for the Tableau Server A common area to investigate when troubleshooting Kerberos authentication issues is the configuration of Service Principal Names (SPNs) for the Tableau Server. Incorrect or incomplete SPN configuration can prevent proper authentication, as Kerberos relies on SPNs to associate service instances with service logon accounts. Option A is incorrect because while web browser compatibility is important, it is not typically the cause of Kerberos-specific issues. Option C is incorrect as network speed, while impacting overall performance, is less likely to be a direct factor in Kerberos authentication problems. Option D is incorrect because the frequency of synchronization between Tableau Server and the domain controller is not typically a factor in Kerberos authentication issues.

NEW QUESTION # 72
When configuring Tableau Server for use with a load balancer, what is an essential consideration to ensure effective load distribution and user session consistency?

- A. Setting up the load balancer to redirect all write operations to a single node
- B. Enabling sticky sessions on the load balancer to maintain user session consistency
- C. Allocating a separate subnet for the load balancer to enhance network performance
- D. Configuring the load balancer to use a round-robin method for distributing requests across nodes

Answer: B

Explanation:
Enabling sticky sessions on the load balancer to maintain user session consistent-cy Enabling sticky sessions on the load balancer is crucial when integrating with Tableau Server. It ensures that a user's session is consistently directed to the same server node during their interaction. This is important for maintaining session state and user experience, particularly when interacting with complex dashboards or during data input. Option A is incorrect because while round-robin dis-attribution is a common method, it does not address session consistency on its own. Option C is incorrect as redirecting all write operations to a single node can create a bottleneck and is not a standard practice for load balancing in Tableau Server environments. Option D is incorrect because allocating a separate subnet for the load balancer, while potentially beneficial for network organization, is not directly related to load balancing effectiveness for Tableau Server.

NEW QUESTION # 73
.....

You will get your hands on the international Analytics-Arch-201 certificate you want. Perhaps you can ask the people around you that Analytics-Arch-201 study engine have really helped many people pass the exam. Of course, you can also experience it yourself. Next, allow me to introduce our Analytics-Arch-201 Training Materials. First, our Analytics-Arch-201 practice briandumps have varied versions as the PDF, software and APP online which can satify different needs of our customers. Secondly, the price is quite favourable.
