퍼펙트한 ChromeOS-Administrator최신버전 덤프샘플 다운 최신 덤프모음집

아무런 노력을 하지 않고 승진이나 연봉인상을 꿈꾸고 있는 분이라면 이 글을 검색해낼수 없었을것입니다. 승진이나 연봉인상을 꿈꾸면 승진과 연봉인상을 시켜주는 회사에 능력을 과시해야 합니다. IT인증 시험은 국제적으로 승인해주는 자격증을 취득하는 시험입니다. Itcertkr의 Google인증 ChromeOS-Administrator덤프의 도움으로 Google인증 ChromeOS-Administrator시험을 패스하여 자격증을 취득하면 승진이나 연봉인상의 꿈이 이루어집니다. 결코 꿈은 이루어질것입니다.

## 최신 Professional ChromeOS Administrator ChromeOS-Administrator 무료 샘플문제 (Q81-Q86):

### 질문 # 81

You are tasked with converting hundreds of Windows & Mac machines across multiple locations to ChromeOS Flex and enrolling them into the Admin console. The available network bandwidth is limited at many of the locations and the devices are not currently managed with any endpoint management system.

Which two operations are required to perform the task?

Choose 2 answers

- A. Use PXE boot to load the ChromeOS Flex image onto devices and have them automatically convert across all locations after they're restarted
- B. Distribute USB flash drives with the ChromeOS Flex image to the different locations and ask local personnel or a services partner to manually convert each device
- C. Contact an authorized Zero-Touch Enrollment (ZTE) reseller and share the serial numbers of the devices you're converting and the domain you're enrolling them into to have them pre-provisioned into the Admin console
- D. Install the Recovery Tool extension on all devices that are to be converted and follow the step-by-step installer to convert each device directly without the need of USB drives
- E. Create a dedicated enrollment account for each location and place them into the OUs you want the devices enrolled into then enable the "Place ChromeOS device in user organization" policy and enroll the devices using the respective enrollment account for each location

정답: B,E

### 설명:

\* Create Dedicated Enrollment Accounts: Create separate enrollment accounts for each location, placing them in the respective OUs where the converted devices should be enrolled.

\* Enable Policy: Turn on the "Place ChromeOS device in user organization" policy. This ensures devices are automatically enrolled into the correct OU based on the enrollment account used.

\* Enroll Devices: Use the dedicated enrollment account for each location to enroll the converted devices. This allows for organized management based on location.

Option E:

\* Distribute USB Drives: Prepare USB flash drives with the ChromeOS Flex image and distribute them to the different locations.

\* Manual Conversion: Instruct local personnel or a service partner to manually convert each device using the provided USB drives. This method is suitable when network bandwidth is limited and doesn't rely on existing endpoint management infrastructure.

Reasons for not choosing other options:

\* Option B: The Recovery Tool is primarily used for creating recovery media for ChromeOS devices, not converting other operating systems.

\* Option C: PXE boot is a network-based installation method, not ideal for locations with limited bandwidth.

\* Option D: While zero-touch enrollment (ZTE) streamlines enrollment, it requires pre-provisioning devices with the vendor or reseller, which might not be feasible in this scenario.

By combining options A and E, you can efficiently convert and enroll devices in multiple locations with limited network resources and no existing management systems.

### 질문 # 82

What should you do to activate biometrics unlock for the devices that support it?

- A. Enable fingerprint unlock
- B. Enable face unlock
- C. Buy external USB fingerprint reader
- D. Upgrade device license to "Chrome Security Plus"

정답: A

**설명:**

To activate biometric unlocking on ChromeOS devices that support it, you need to enable fingerprint unlock.

This feature allows users to sign in or unlock their devices using a registered fingerprint, enhancing security and convenience.

Verified Answer from Official Source:

The correct answer is verified from the Google ChromeOS Security Features Guide, which specifies that fingerprint unlock must be enabled for compatible devices.

"To enable biometric authentication on supported ChromeOS devices, go to Security Settings and enable fingerprint unlock."

Fingerprint unlock is a secure and fast method of authentication, available on newer ChromeOS devices equipped with fingerprint scanners.

Objectives:

- \* Enhance device security with biometric authentication.
- \* Manage fingerprint settings through ChromeOS.

**질문 # 83**

You have been tasked to deploy shared devices using Managed Guest Sessions. Your IT policy requires blocking access to "google.com" at the parent organization. How would you prevent users from accessing "google.com" for all Managed Guest Sessions at the parent organization?

- A. Add "google.com" to "the blocked URL exceptions"
- B. Add "google.com" to "allow insecure content on these sites"
- C. Add "google.com" to "disallowed URLs in content settings"
- **D. Add "google.com" to "the list of blocked URLs"**

**정답: D**

**설명:**

To block access to a specific website across all managed guest sessions, you need to add the site to the "list of blocked URLs". This ensures that regardless of the session type, users cannot access the specified site.

Verified Answer from Official Source:

The correct answer is verified from the Google ChromeOS Managed Guest Session Guide, which explains that adding URLs to the blocked list restricts access across all sessions.

"To enforce web filtering policies during Managed Guest Sessions, add the URL to the blocked list in the Admin console under User & Browser Settings." By configuring the blocked URL list, you enforce consistent access policies even when devices are used in guest mode.

Objectives:

- \* Implement web filtering for Managed Guest Sessions.
- \* Enforce consistent security policies across sessions.

**질문 # 84**

You need to set a policy that prevents the device from shutting down while idling on the sign-in screen. Where should you navigate to?

- A. User Settings > User Experience
- B. User Settings > Idle settings
- C. Device Settings > Allow shutdown
- **D. Device Settings > Power management**

**정답: D**

**설명:**

To prevent a ChromeOS device from shutting down while idling on the sign-in screen, you need to adjust the power management settings. This can be done through the following steps:

\* Go to the Google Admin console.

\* Navigate to Device Management > Chrome Management > Device Settings.

\* Find the Power management section and locate the setting that controls idle behavior on the sign-in screen.

\* Adjust the setting to prevent shutdown during idle periods.

Option A is incorrect because idle settings primarily control screen dimming and sleep behavior.

Option B is incorrect because user experience settings generally focus on visual and interaction aspects, not power management.

Option C is incorrect because there isn't a specific "Allow shutdown" setting in ChromeOS device settings.

### 질문 # 85

To allow remote users to securely connect to an internal network, the organization you're supporting is using a VPN. The organization would like you to configure the ChromeOS devices so that the Android VPN clients deployed are automatically configured with the correct hostname. How should you configure this in the Admin Console according to Google best practice?

- A. Add a managed configuration using JSON to the Android app
- B. Download the Android app on a ChromeOS device, add the hostname manually then re-upload the app in the organization's private Google Play Store and deploy it to all ChromeOS devices
- C. Contact the VPN provider and ask them to provide you with a custom installable client with the correct configuration pre-configured Then deploy that installable
- D. Upload a JSON file with the configuration into the Google Play Store

정답: A

설명:

This is the most efficient and scalable way to automatically configure Android VPN clients on ChromeOS devices with the correct hostname:

\* Obtain Configuration: Get the required VPN configuration details (hostname, authentication methods, etc.) from the VPN provider or your organization's network administrator. This configuration is typically in JSON format.

\* Create Managed Configuration: In the Google Admin console, navigate to Devices > Chrome > Settings > Android Apps > Managed Configurations.

\* Select the VPN App: Choose the specific Android VPN app you want to configure.

\* Add JSON Configuration: Paste the JSON configuration into the provided field. Ensure the configuration is valid and accurate.

\* Save and Deploy: Save the managed configuration and apply it to the desired organizational units (OUs) containing the ChromeOS devices.

This method allows you to centrally manage VPN configurations for Android apps on ChromeOS devices, ensuring consistency and reducing the manual effort required from users.

### 질문 # 86
