完美的Order-Management-Administrator指南 & 保證Salesforce Order-Management-Administrator考試成功 - 高通過率的Order-Management-Administrator最新考題

Testpdf提供的Order-Management-Administrator考古題是最全面的學習資料，這是一個可以讓您高效高速的掌握知識的題庫寶典。我們提供的Salesforce Order-Management-Administrator模擬測試題及答案和真實考試的題目及答案有95%的相似性，能保證您100%通過Order-Management-Administrator認證考試，滿足廣大考生需求。當您真的了解我們產品的可靠性之后，您會毫不猶豫的購買它，因為Salesforce Order-Management-Administrator是您最好的選擇，甚至是您未來職業生涯成功不可缺少的。

最新的 Salesforce Order Management Order-Management-Administrator 免費考試真題 (Q45-Q50):

問題 #45

Which two Order Management objects have their tabs set to Tab Hidden by default?

- A. SalesLocation
- **B. Locations**
- C. Accounts
- D. Fulfillment Orders
- **E. OrderDeliveryMethod**

答案: B,E

解題說明:

The OrderDeliveryMethod and Locations objects have their tabs set to Tab Hidden by default. These objects are used to store information about how an order is delivered and where it is fulfilled from, respectively. They are not meant to be accessed directly by users, but rather through related lists or lookup fields on other objects. Reference: Order Management Objects

問題 #46

A customer wants to change the layout of the out of the box Order Summary Lightning Record Page to three columns instead of two. How can an administrator satisfy this requirement?

- A. Change the page layout template to Three Regions in the layout editor
- **B. Edit the Lightning Record Page and change the Template to Three Regions**
- C. Add another column component to the existing Lightning Record Page
- D. Create a new Lightning Record Page and select the Three Regions template

答案: B

解題說明:

The best way for the administrator to satisfy this requirement is to edit the Lightning Record Page and change the Template to Three Regions. A Lightning Record Page is a type of page that displays details and related information about a specific record in Lightning Experience or Salesforce mobile app. A Lightning Record Page can be customized using the Lightning App Builder, which is a tool that allows administrators to drag and drop components onto a page layout. A Template is a predefined layout that determines how components are arranged on a page. A Three Regions template is a type of template that divides the page into three columns or regions. The administrator can edit the Lightning Record Page for the Order Summary object, and change the Template to Three Regions in the Lightning App Builder. 問題 #47

Based on some changes in Universal Containers' Commerce engine, new Orders are expected to have two additional attributes at the header level. In Order Management, which other Object besides Order also needs to be extended?

- **A. Order Summary**
- B. Change Order
- C. Delivery Groups
- D. Payment Summary

答案: A

解題說明:

Based on some changes in Universal Containers' Commerce engine, new Orders are expected to have two additional attributes at the header level. In Order Management, besides Order, the other object that also needs to be extended is Order Summary. An Order Summary is a record that stores information about an order, such as the total amount, the number of items, and the fulfillment status. An Order Summary is created by a process called Create Order Summary Process, which runs whenever an order is created or updated. The process calls a flow called Create OrderSummary Flow, which calculates the order summary fields and creates or updates the order summary record. To extend an object in Order Management, an administrator can create custom attributes on that object that match the API name and data type of the corresponding attributes in B2C Commerce. Reference: Order Management Objects

問題 #48

How can an administrator synchronize licenses from the production org when preparing a sandbox for development?

- A. Export a Change Set
- B. Import a Change Set
- **C. Run the Match Production Licenses to Sandbox without a Refresh tool in Setup**
- D. Use a custom shell script

答案: C

解題說明:

The best way for an administrator to synchronize licenses from the production org when preparing a sandbox for development is to run the Match Production Licenses to Sandbox without a Refresh tool in Setup. This tool allows administrators to match their sandbox licenses with their production licenses without refreshing their sandbox. This way, the administrator can ensure that the sandbox has the same number and type of licenses as the production org, and avoid any license-related issues when developing or testing in the sandbox.

問題 #49

What type of relationship exists between FulfillmentOrder and Location?

- A. Junction (Many to Many)
- **B. Many-to-One Lookup (Location) Fulfilled from Location Id**
- C. One-to-One Lookup (Location) Fulfilled From Location
- D. One-to-Many Lookup (Location) Fulfilled From Location Id

答案: B

解題說明:

The type of relationship that exists between FulfillmentOrder and Location is Many-to-One Lookup (Location) Fulfilled From Location Id. A Lookup field is a type of custom field that creates a relationship between two objects, but does not support rollup summary fields. A Many-to-One relationship means that many child records can be related to one parent record, but not vice versa. In this case, a FulfillmentOrder has a Lookup field named Fulfilled From Location Id that references a Location record. A Location is a record that represents a physical location from which order product items are fulfilled, such as warehouses and retail stores. A Location can have many FulfillmentOrders associated with it, but a FulfillmentOrder can only have one Location.
