Track Your Progress And Get Succeed With Salesforce PDI Practice Test

As a matter of fact, since the establishment, we have won wonderful feedback and ceaseless business, continuously working on developing our PDI test prep. We have been specializing PDI exam dumps many years and have a great deal of long-term old clients, and we would like to be a reliable cooperator on your learning path and in your further development. While you are learning with our PDI Quiz guide, we hope to help you make out what obstacles you have actually encountered during your approach for PDI exam torrent through our PDF version, only in this way can we help you win the PDI certification in your first attempt.

Salesforce PDI or Platform Developer I (PDI) certification is an entry-level certification that validates a candidate's knowledge and skills in developing custom applications on the Salesforce platform. Platform Developer I (PDI) certification is designed for individuals who have experience in programming and developing applications using Apex and Visualforce.

To take the exam, candidates must have a basic knowledge of programming concepts and have experience with the Salesforce platform. PDI exam covers topics such as Apex programming language, Visualforce pages, Salesforce Lightning Framework, and data modeling. It also tests the candidate's understanding of the Salesforce development lifecycle, security and access controls, and deployment strategies.

Salesforce PDI Certification is a valuable credential for developers who want to advance their careers in Salesforce development. Platform Developer I (PDI) certification is recognized by employers as a mark of excellence and can help developers stand out in a competitive job market. Additionally, Salesforce PDI certified developers are often in high demand and can command higher salaries than non-certified developers. Overall, the Salesforce PDI certification is a great way for developers to demonstrate their expertise in building custom applications on the Salesforce platform and advance their careers in Salesforce development.

PDI Valid Test Papers, PDI Free Learning Cram

The pass rate is 98% for PDI exam bootcamp, if you choose us, we can ensure you that you can pass the exam just one time. In addition, we offer you free demo to have a try before buying, so that you can know what the complete version is like. In order to strengthen your confidence for PDI training materials, we are pass guarantee and money back guarantee, and we will refund your money if you fail to pass the exam. We have a professional service team and they have the professional knowledge for PDI Exam Bootcamp, if you have any questions, you can contact with them.

Salesforce Platform Developer I (PDI) Sample Questions (Q76-Q81):

NEW QUESTION # 76
The sales management team requires that the lead source field of the Lead record be populated when Lead is converted. What would a developer use to ensure that a user populates the Lead source field?

- A. Formula field

- B. Validation rule
- C. Workflow rule
- D. Process builder

Answer: B

NEW QUESTION # 77
A developer is creating a page that allows users to create multiple Opportunities. The developer is asked to verify the current user's default } | Opportunity record type, and set certain default values based on the record type before inserting the record. i, J Calculator How can the developer find the current user's default record type? ns

- A. Use the Schema.userInfo.Opportunity.getDefaultRecordType() method. < Create the opportunity and check the opportunity.recordType before inserting, which will have the record ID of the current Dal user's default record type.
- B. o Use Opportunity. SObjectType.getDescribe().getRecordTypeInfos() to get a list of record types, and iterate through them until [J isDefaultRecordTypeMapping() is true. Pencil & Paper |
- C. Query the Profile where the ID equals userInfo.getProfileID() and then use the profile.Opportunity.getDefaultRecordType() | | method.] |

Answer: B

NEW QUESTION # 78
A developer is asked to write helper methods that create test data for unit tests.

```
01:  public TestUtils {

02:

03:     public static Account createAccount() {

04:         Account act = new Account();

05:         // ...set some fields on acct...

06:         return act;

07:     }

08:  //...other methods...

09: }
```

What should be changed in the TestUtils class so that its methods are only usable by unit test methods?

- A. Change public to private on line 01.
- B. @isTest above line 03.
- C. Remove static from line 03.
- D. Add @istest above line 01.

Answer: D

Explanation:
To ensure that the TestUtils class and its methods are only accessible by unit test methods, the class must be annotated with the @isTest annotation. This annotation limits the scope of the class and its methods to test contexts only.
Why @isTest?
Purpose of @isTest:
The @isTest annotation marks a class or method for use exclusively within test scenarios. It prevents the methods from being accidentally invoked in production code.
This ensures better test isolation and prevents misuse.
Static Test Data Methods:
Marking helper methods for test data creation as @isTest ensures they do not interfere with production code and are strictly for testing purposes.
Analysis of Options:

Option A: @isTest above line 03:
Incorrect. Applying @isTest only to the createAccount method would work, but the other methods in the class would still be accessible. This does not satisfy the requirement of restricting the entire class.
Option B: Add @isTest above line 01:
Correct. Annotating the class ensures all methods within the class are accessible only in the context of tests.
Option C: Change public to private on line 01:
Incorrect. Changing the class to private would cause a compilation error, as top-level classes in Salesforce cannot be declared private.
Option D: Remove static from line 03:
Incorrect. Removing static does not affect the test scope of the class or its methods. Static methods can still be invoked, and this does not restrict access to test contexts.
Correct Implementation:
The corrected code would look like this:
@isTest
public class TestUtils {
public static Account createAccount() {
Account acct = new Account();
// Set some fields on acct
return acct;
}
// Other methods...
}
