

Palo Alto Networks PCNSE測試題庫 & PCNSE真題

2026 VCESoft最新的PCNSE PDF版考試題庫和PCNSE考試問題和答案免費分享：<https://drive.google.com/open?id=1AXASRQovMvF6Lxd4Z9WmxyTPatMlrszs>

PCNSE考古題被大多數考生證明是有效的，通過很多IT認證考試的考生使用之後得出，能使考生在短時間內掌握最新的Palo Alto Networks PCNSE考試相關知識。由高級認證專家不斷完善出最新版的PCNSE考古題資料，他們的研究結果可以100%保證您成功通過PCNSE考試，獲得認證，這是非常有效的題庫資料。一些通過PCNSE考試的考生成為了我們的回頭客，他們說選擇VCESoft就意味著選擇成功。

為了獲得Palo Alto Networks PCNSE認證，考生必須通過嚴格的認證考試。該考試包含75道多選題，限時90分鐘。考生需要得到至少70%的分數才能通過考試。考試可在Pearson VUE測試中心進行，考生需要提前註冊並支付考試費用。

PCNSE考試專注於Palo Alto Networks最新版本的PAN-OS 10.0，這是該公司下一代防火牆的操作系統。該考試測試候選人在配置和部署防火牆策略、實施高級安全功能和解決常見問題方面的能力。PCNSE認證是一個全球認可的資格，證明了安全專業人士利用Palo Alto Networks技術保護免受網絡威脅的專業知識。

熱門的PCNSE測試題庫，由Palo Alto Networks權威專家撰寫

所有的IT專業人士熟悉的Palo Alto Networks的PCNSE考試認證，夢想有有那頂最苛刻的認證，你可以得到你想要的職業生涯，你的夢想。通過VCESoft Palo Alto Networks的PCNSE考試培訓資料，你就可以得到你想要得的。

Palo Alto Networks PCNSE認證考試基於最新版本的PAN-OS 10.0。該考試測試候選人對防火牆架構、部署方案、網

絡安全概念和故障排除方法的知識。它還涵蓋了PAN-OS 10.0的最新功能，包括新的安全增強功能、策略管理和設備管理能力。

最新的 PCNSE PAN-OS PCNSE 免費考試真題 (Q30-Q35):

問題 #30

Which two key exchange algorithms consume the most resources when decrypting SSL traffic? (Choose two.)

- A. RSA
- **B. DHE**
- C. ECDSA
- **D. ECDHE**

答案: **B,D**

解題說明:

The two key exchange algorithms that consume the most resources when decrypting SSL traffic are ECDHE and DHE. These are both Diffie-Hellman based algorithms that enable perfect forward secrecy (PFS), which means that they generate a new and unique session key for each SSL/TLS session, and do not reuse any previous keys. This enhances the security of the encrypted communication, but also increases the computational cost and complexity of the key exchange process. ECDHE stands for Elliptic Curve Diffie-Hellman Ephemeral, which uses elliptic curve cryptography (ECC) to generate the session key. DHE stands for Diffie-Hellman Ephemeral, which uses modular arithmetic to generate the session key. Both ECDHE and DHE require more CPU and memory resources than RSA, which is a non-PFS algorithm that uses public and private keys to encrypt and decrypt the session key. 問題 #31

Which logs enable a firewall administrator to determine whether a session was decrypted?

- A. Correlated Event
- B. Decryption
- **C. Traffic**
- D. Security Policy

答案: **C**

問題 #32

An engineer configures SSL decryption in order to have more visibility to the internal users' traffic when it is regressing the firewall. Which three types of interfaces support SSL Forward Proxy? (Choose three.)

- **A. Layer 3**
- **B. Virtual Wire**
- C. Tap
- **D. Layer**
- E. High availability (HA)

答案: **A,B,D**

解題說明:

Explanation

SSL Forward Proxy is a feature that allows the firewall to decrypt and inspect outbound SSL traffic from internal users to external servers. The firewall acts as a proxy (MITM) generating a new certificate for the accessed URL and presenting it to the client during SSL handshake. SSL Forward Proxy can be configured on any interface type that supports security policies, which are Layer 2, Virtual Wire, and Layer 3 interfaces. These interface types allow the firewall to apply security profiles and URL filtering on the decrypted SSL traffic.

問題 #33

In URL filtering, which component matches URL patterns?

- A. single-pass pattern matching on the data plane
- B. security processing on the data plane
- C. live URL feeds on the management plane
- D. signature matching on the data plane

答案： A

解題說明：

問題 #34

An Administrator is configuring Authentication Enforcement and they would like to create an exemption rule to exempt a specific group from authentication. Which authentication enforcement object should they select?

- A. default-no-captive-portal
- B. default-web-format
- C. default-authentication-bypass
- D. default-browser-challenge

答案： A

問題 #35
