There are thousands of customers have passed their exam successfully and get the related certification. After that, all of their Google Certified Professional - Cloud Developer exam torrents were purchase on our website. In addition to the industry trends, the Professional-Cloud-Developer Test Guide is written by lots of past materials' rigorous analyses. The language of our study materials are easy to be understood, only with strict study, we write the latest and the specialized study materials. We want to provide you with the best service and hope you can be satisfied.

Exam Details and Topics

The qualifying test for the Google Professional Cloud Developer certification has the duration of two hours. The questions included in the exam are presented in two formats: multiple select and multiple choice. The applicants can sit for the test either in English or

Japanese, and there are two options of the exam delivery: an online proctored test from a remote location or an onsite exam at a testing center. The potential learners can use the search on the official webpage to find the center that is located nearest to them. To register for and schedule the exam, you need to pay the fee of \$200 plus applicable taxes.

Google Certified Professional - Cloud Developer Sample Questions (Q323-Q328):

NEW QUESTION # 323

Which of the following iPhones support using Memoji?

- A. iPhone 6s
- **B. iPhone X**
- C. iPhone 7
- D. iPhone 8

Answer: B

Explanation:

Explanation/Reference: <https://www.quora.com/Does-Memoji-work-on-all-devices-updated-to-iOS-12>

NEW QUESTION # 324

You manage a microservice-based ecommerce platform on Google Cloud that sends confirmation emails to a third-party email service provider using a Cloud Function. Your company just launched a marketing campaign, and some customers are reporting that they have not received order confirmation emails. You discover that the services triggering the Cloud Function are receiving HTTP 500 errors. You need to change the way emails are handled to minimize email loss. What should you do?

- A. Increase the Cloud Function's timeout to nine minutes.
- B. Configure the sender application to write emails to Memorystore and then trigger the Cloud Function. When the function is triggered, it reads the email details from Memorystore and sends them to the email service.
- **C. Configure the sender application to publish the outgoing emails in a message to a Pub/Sub topic. Update the Cloud Function configuration to consume the Pub/Sub queue.**
- D. Configure the sender application to retry the execution of the Cloud Function every one second if a request fails.

Answer: C

Explanation:

This is a robust and scalable approach. By decoupling the email sending process using Pub/Sub, you introduce a queueing mechanism. This ensures that even if the Cloud Function encounters an issue, the email messages are not lost but remain in the queue. Additionally, Pub/Sub can handle high throughput and provides retry mechanisms.

NEW QUESTION # 325

You have an application controlled by a managed instance group. When you deploy a new version of the application, costs should be minimized and the number of instances should not increase. You want to ensure that, when each new instance is created, the deployment only continues if the new instance is healthy. What should you do?

- A. Perform a rolling-action with maxHealthy set to 0, maxUnhealthy set to 1.
- B. Perform a rolling-action with maxSurge set to 0, maxUnavailable set to 1
- C. Perform a rolling-action with maxHealthy set to 1, maxUnhealthy set to 0.
- **D. Perform a rolling-action with maxSurge set to 1, maxUnavailable set to 0.**

Answer: D

Explanation:

NEW QUESTION # 326

You have an application deployed in production. When a new version is deployed, some issues don't arise until the application receives traffic from users in production. You want to reduce both the impact and the number of users affected. Which deployment strategy should you use?

- **A. Blue/green deployment**
- B. Canary deployment
- C. Recreate deployment
- D. Rolling deployment

Answer: A

Explanation:

NEW QUESTION # 327

You are a developer at a social media company. The company runs their social media website on-premises and uses MySQL as a backend to store user profiles and user posts. Your company plans to migrate to Google Cloud, and your team will migrate user profile information to Firestore.

You are tasked with designing the Firestore collections. What should you do?

- A. Create one root collection for user posts, and create one subcollection for each user's profile.
- **B. Create one root collection for user profiles, and create one subcollection for each user's posts.**
- C. Create one root collection for user profiles, and create one root collection for user posts.
- D. Create one root collection for user profiles, and store each user's post as a nested list in the user profile document.

Answer: B
