Especially in the face of some difficult problems, the user does not need to worry too much, just learn the AWS-Developer Study Materials provide questions and answers, you can simply pass the exam.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q366-Q371):

NEW QUESTION # 366

A developer wants the ability to roll back to a previous version of an AWS Lambda function in the event of errors caused by a new deployment.

How can the developer achieve this with MINIMAL impact on users?

- A. Change the application to use an alias that points to the current version Deploy the new version of the code. Update the alias to direct 10% of users to the newly deployed version. If too many errors are encountered, send 100% of traffic to the previous version
- B. Create three aliases: new, existing, and router Point the existing alias to the current version Have the router alias direct 100% of users to the existing alias Update the application to use the router alias Deploy the new version of the code Point the

new alias to this version Update the router alias to direct

10% of users to the new alias If too many errors are encountered, send 100% of traffic to the existing alias

- C. Change the application to use an alias that points to the current version Deploy the new version of the code Update the alias to use the newly deployed version If too many errors are encountered, point the alias back to the previous version
- D. Do not make any changes to the application Deploy the new version of the code. If too many errors are encountered, point the application back to the previous version using the version number in the Amazon Resource Name (ARN)

Answer: C

NEW QUESTION # 367

Two containerized microservices are hosted on Amazon EC2 ECS. The first microservice reads an Amazon RDS Aurora database instance, and the second microservice reads an Amazon DynamoDB table.

How can each microservice be granted the minimum privileges?

- A. Set `ECS_ENABLE_TASK_IAM_ROLE` to false on EC2 instance boot in the ECS agent configuration file. Grant the instance profile role read-only access to the Aurora database and DynamoDB.
- B. Set `ECS_ENABLE_TASK_IAM_ROLE` to true on EC2 instance boot in the ECS agent configuration file. Run the first microservice with an IAM role for ECS tasks with read-only access for the Aurora database. Run the second microservice with an IAM role for ECS tasks with read-only access to DynamoDB.
- C. Set `ECS_ENABLE_TASK_IAM_ROLE` to true on EC2 instance boot in the ECS agent configuration file. Grant the instance profile role read-only access to the Aurora database and DynamoDB.
- D. Set `ECS_ENABLE_TASK_IAM_ROLE` to false on EC2 instance boot in ECS agent configuration file. Run the first microservice with an IAM role for ECS tasks with read-only access for the Aurora database. Run the second microservice with an IAM role for ECS tasks with read-only access to DynamoDB.

Answer: B

NEW QUESTION # 368

A company is developing a serverless ecommerce web application. The application needs to make coordinated, all-or-nothing changes to multiple items in the company's inventory table in Amazon DynamoDB.

Which solution will meet these requirements?

- A. Set up a FIFO queue using Amazon SQS. Group the changes in the queue. Update the table based on the grouped changes.
- B. Enable transactions for the DynamoDB table. Use the BatchWriteItem operation to update the items.
- C. Use the TransactWriteItems operation to group the changes. Update the items in the table.
- D. Create a transaction table in an Amazon Aurora DB cluster to manage the transactions. Write a backend process to sync the Aurora DB table and the DynamoDB table.

Answer: C

Explanation:

Explanation/Reference: <https://aws.amazon.com/blogs/mobile/appsync-caching-transactions/>

NEW QUESTION # 369

A Developer wants to find a list of items in a global secondary index from an Amazon DynamoDB table.

Which DynamoDB API call can the Developer use in order to consume the LEAST number of read capacity units?

- A. Scan operation using eventually-consistent reads
- B. Scan operation using strongly-consistent reads
- C. Query operation using eventually-consistent reads
- D. Query operation using strongly-consistent reads

Answer: C

Explanation:

NEW QUESTION # 370

A Developer registered an AWS Lambda function as a target for an Application Load Balancer (ALB) using a CLI command. However, the Lambda function is not being invoked when the client sends requests through the ALB.

Why is the Lambda function not being invoked?

- A. A Lambda function cannot be registered as a target for an ALB.
- B. A Lambda function can be registered with an ALB using AWS Management Console only.
- C. Cross-zone is not enabled on the ALB.
- **D. The permissions to invoke the Lambda function are missing.**

Answer: D

Explanation:
