

Your Best Choice to Get Cisco 300-430 Certification is PrepAwayTest

P.S. Free 2026 Cisco 300-430 dumps are available on Google Drive shared by PrepAwayTest: <https://drive.google.com/open?id=1Q20WtVpNKGTdytOj2eBfi5HAZ0p4IxT>

To write an effective 300-430 learning guide, one needs to have a good command of knowledge related with the exam. Our experts who devoted themselves to 300-430 practice materials over ten years constantly have been focused on proficiency of 300-430 Exam simulation with irreplaceable attributes. On some tough points, they use specific facts, definite figures to stress concretion. With our 300-430 study guide, you will know what will come in the real exam.

Who should take the Cisco 300-430: Implementing Cisco Enterprise Wireless Networks Exam

People who wish to explore the power of the dynamic culture of the Cisco Learning Network to jump-start their certification and lifelong learning goals should take this exam. Those who want to get useful tools for IT training for all Cisco certifications should also get this certification. People with prior knowledge of integrating wireless networks, and complete understanding of their implementation, from the service provider are highly recommended to take this exam and get themselves certified from Cisco.

List of the target audience for this exam:

- Network designers
- Network administrators
- Network supervisors
- Network managers
- Network Operations Center (NOC) personnel
- Network architects
- Channel partners

Realistic Cisco New 300-430 Test Bootcamp Pass Guaranteed

For candidates who will attend the exam, some practice is necessary. 300-430 exam materials are valid and high-quality. We have a professional team to search for the first-hand information for the exam. We also have strict requirements for the questions and answers of 300-430 exam materials, we ensure you that the 300-430 Training Materials are most useful tool, which can help you pass the exam just one time. In addition, we offer you free update for one year after purchasing, we also have online service stuff, if you have any questions, just contact us.

What is the duration, language, and format of Cisco 300-430: Implementing Cisco Enterprise Wireless Networks Exam

- Format: Multiple choice
- Language of Exam: English
- Validity: 3 years
- Duration of Exam: 90 minutes

Cisco Implementing Cisco Enterprise Wireless Networks Sample Questions (Q210-Q215):

NEW QUESTION # 210

What must be configured on ISE version 2.1 BYOD when using Single SSID?

- A. no authentication
- B. WPA2
- C. 802.1x
- D. open authentication

Answer: C

Explanation:

<https://www.cisco.com/c/en/us/support/docs/security/identity-services-engine/216535-configure-single-ssid-wireless-byod-on-w.html>

NEW QUESTION # 211

An engineer must perform a Layer 2 survey for a mining facility. Which type of antenna does the engineer use in the mine shaft?

- A. dipole
- B. omnidirectional
- C. patch
- D. internal

Answer: C

Explanation:

For a Layer 2 survey in a mining facility, particularly in a mine shaft, a patch antenna is the most suitable choice. Patch antennas are directional and can be used to focus the signal in a specific direction, which is ideal for the long and narrow structure of a mine shaft. This type of antenna can help in providing better coverage and signal strength in challenging environments like mines.

NEW QUESTION # 212

A user is trying to connect to a wireless network that is configured for WPA2-Enterprise security using a corporate laptop. The CA certificate for the authentication server has been installed on the Trusted Root Certification Authorities store on the laptop. The user has been prompted to enter the credentials multiple times, but the authentication has not succeeded. What is causing the issue?

- A. There is an IEEE invalid 802.1X authentication policy on the authentication server.
- B. There is an invalid 802.1X authentication policy on the authenticator.
- C. The user Active Directory account is locked out after several failed attempts.
- D. The laptop has not received a valid IP address from the wireless controller.

Answer: A

Explanation:

If the supplicant submits an invalid credential or is not allowed to access the network for policy reasons, the authentication server returns a RADIUS Access-Reject message with an encapsulated EAP-Failure message.

NEW QUESTION # 213

A wireless network has been implemented to enable multicast video to be streamed reliably over the wireless link to the wireless users. After a client reports that the video is unable to stream, the administrator determines that the client is connecting at a data rate

of 12 Mbps and is trying to stream to a valid multicast address on the network. Which two actions must be applied? (Choose two.)

- **A. Implement video-stream for the multicast video on the controller**
- B. Turn off IGMP snooping for all the configured WLANS on the controller.
- C. Allow RTSP to stream the video due to wireless multicast not using acknowledgements.
- D. Change the WLAN QoS value to Bronze for the WLAN that multicast will be enabled.
- **E. Allow multicast-direct to work correctly and multicast-direct to be enabled globally.**

Answer: A,E

Explanation:

To ensure reliable streaming of multicast video over a wireless link, it's essential to optimize the multicast settings on the controller. Option E, implementing video-stream for the multicast video on the controller, is a feature that optimizes the delivery of multicast streams by converting them into unicast streams for specific clients, thus improving reliability. Option B, allowing multicast-direct to work correctly, involves enabling multicast-direct globally, which allows multicast packets to be sent directly to clients without the need for them to subscribe to a specific multicast group, enhancing efficiency and reliability.

NEW QUESTION # 214

An engineer is implementing RADIUS to restrict administrative control to the network with the WLC management IP address of 192.168.1.10 and an AP subnet of 192.168.2.0/24. Which entry does the engineer define in the RADIUS server?

- **A. administrative access defined on the WLC and the network range 192 168 2 0/255 255 254.0**
- B. WLC roles for commands and the network range 192 168 1 0/255 255 255.0
- C. NAS entry of the virtual interface and the network range 192 168 2 0/255 255 255 0
- D. shared secret defined on the WLC and the network range 192 168 1 0/255 255 254.0

Answer: A
