Veeam Certified Engineer v12 Sample Questions (Q25-Q30):

NEW QUESTION # 25

An engineer needs to back up their VMware VMs running on a Nimble Array. The engineer has checked "Enable backup from storage snapshots" when creating the job. When the backup runs, snapshots are not triggered on the Nimble Array.

Which additional step must be performed?

- A. VMware Tools need to be updated
- B. The Nimble Array needs to be added to Storage Infrastructure.
- C. The backup repository is not configured to accept snapshots
- D. The Nimble Array needs to be rebooted to allow for Backup from Storage Snapshots.

Answer: B

Explanation:

To enable backup from storage snapshots with a Nimble Array, it is necessary to add the storage system to the Veeam Backup & Replication console's Storage Infrastructure. This allows Veeam to interact with the Nimble Array and orchestrate the creation of storage snapshots, which can then be used for backups. Simply enabling the backup from storage snapshots option in the job is not enough; the array itself must be integrated into the Veeam infrastructure. References:
