CompTIA SecurityX Certification Exam Sample Questions (Q249-Q254):

NEW QUESTION # 249

A software company deployed a new application based on its internal code repository. Several customers are reporting anti-malware alerts on workstations used to test the application. Which of the following is the most likely cause of the alerts?

- A. Unsecure bundled libraries
- B. Misconfigured code commit
- C. Invalid code signing certificate
- D. Data leakage

Answer: A

Explanation:

The most likely cause of the anti-malware alerts on customer workstations is unsecure bundled libraries. When developing and deploying new applications, it is common for developers to use third- party libraries. If these libraries are not properly vetted for security, they can introduce vulnerabilities or malicious code.

Why Unsecure Bundled Libraries?

Third-Party Risks: Using libraries that are not secure can lead to malware infections if the libraries contain malicious code or vulnerabilities.

Code Dependencies: Libraries may have dependencies that are not secure, leading to potential security risks.

Common Issue: This is a frequent issue in software development where libraries are used for convenience but not properly vetted for security.

NEW QUESTION # 250

A company that uses several cloud applications wants to properly identify:

- * All the devices potentially affected by a given vulnerability.
 - * All the internal servers utilizing the same physical switch.
 - * The number of endpoints using a particular operating system.
- Which of the following is the best way to meet the requirements?

- A. CASB
- B. SBoM
- C. CMDB
- D. GRC

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

The requirements demand detailed asset tracking and inventory management. Let's analyze:

- * A. SBoM (Software Bill of Materials): Tracks software components, not hardware or network topology.
- * B. CASB (Cloud Access Security Broker): Secures cloud apps but doesn't map physical switches or OS counts.
- * C. GRC (Governance, Risk, and Compliance): Focuses on risk management, not detailed asset tracking.

Reference: CompTIA SecurityX (CAS-005) objectives, Domain 4: Governance, Risk, and Compliance, covering asset management.

NEW QUESTION # 251

An organization wants to implement a platform to better identify which specific assets are affected by a given vulnerability. Which of the following components provides the best foundation to achieve this goal?

- A. SASE
- B. SLM
- C. SBoM
- D. CMDB

Answer: D

Explanation:

A Configuration Management Database (CMDB) provides the best foundation for identifying which specific assets are affected by a given vulnerability. A CMDB maintains detailed information about the IT environment, including hardware, software, configurations, and relationships between assets. This comprehensive view allows organizations to quickly identify and address vulnerabilities affecting specific assets.

Reference:

CompTIA SecurityX Study Guide: Discusses the role of CMDBs in asset management and vulnerability identification.

ITIL (Information Technology Infrastructure Library) Framework: Recommends the use of CMDBs for effective configuration and asset management.

"Configuration Management Best Practices" by Bob Aiello and Leslie Sachs: Covers the importance of CMDBs in managing IT assets and addressing vulnerabilities.

NEW QUESTION # 252

A company sells a security appliance assembled from globally sourced hardware and software components. Installing the security appliance requires enabling administrative permissions for the service accounts on the appliance. Which of the following allows the company to reassure new and existing customers that the risk introduced by the appliance is minimal?

- A. A transparent supply chain risk management and testing program
- B. The results of a qualitative risk analysis performed on the appliance
- C. A business impact analysis and risk prioritization process
- D. Results of internal risk reduction studies conducted by a third-party assessor

Answer: A

NEW QUESTION # 253

An organization wants to implement a platform to better identify which specific assets are affected by a given vulnerability. Which of the following components provides the best foundation to achieve this goal?

- A. SASE
- B. SLM
- C. SBoM
- D. CMDB

Answer: D

Explanation:

A Configuration Management Database (CMDB) provides the best foundation for identifying which specific assets are affected by a given vulnerability. A CMDB maintains detailed information about the IT environment, including hardware, software, configurations, and relationships between assets.
