DP-600 EXAM WITH QUESTIONS AND ANSWERS 2024-2025

What are the two types of Fabric licenses?

Per user licenses and Capacity licenses.

What are the SKUs for Fabric (capacity licensing)?

F2^a where the capacity units are 2^a and the Power BI v-cores are 2^(a-3). For example, SKU F4 has 4 capacity units and 0.5 Power BI v-cores.

What three things does Microsoft claim a Fabric license allows you to do?

1. Use all the Microsoft Fabric features licensed by capacity
2. Create Microsoft fabric items and connect to other Microsoft Fabric items.
3. Save your items to a workspace and share them with a user that has an appropriate license.

SKUs that are smaller than _____ require a Pro or Premium Per User PPU license or a Power BI individual trial to consume Power BI content.

F64

What are the three types of individual licenses?

1. Free - a free license allows you to create and share Fabric content other than Power BI items in Microsoft Fabric if you have access to a Fabric capacity (either trial or paid).
2. Pro - a Pro license lets you share Power BI content with other users. Every organization needs at least one user with a Pro or a Premium Per User (PPU) license if they intend to use Power BI within Fabric.
3. Premium per-user (PPU) - PPU licenses allow organizations to access Power BI Premium features by licensing every user with a PPU license instead of purchasing a Power BI Premium capacity. PPU can be more cost-effective when Power BI

P.S. Free 2026 Microsoft DP-600 dumps are available on Google Drive shared by Prep4sureGuide: <https://drive.google.com/open?id=1pZYaARwFEgP0MEVvMI49xMChNe7pceSE>

Are you still silly to spend much time to prepare for your test but still fail again and again? Do you find that some candidates pass exam easily with Microsoft DP-600 exam dumps questions? If your goal is passing exams and obtain certifications our DP-600 exam dumps can help you achieve your goal easily, why not choose us? Only dozen of money and 20-35 hours' valid preparation before the test with DP-600 Exam Dumps questions will make you clear exam surely. So why are you still wasting so many time to do useless effort?

Microsoft DP-600 Exam Syllabus Topics:

Section	Weight	Objectives
---------	--------	------------

Topic 1: Prepare data for analytics	45–50	- Implement data storage structures
		• 1. Design and manage lakehouse tables • 2. Configure warehouse storage and querying • 3. Implement delta lake and partitioning
		- Ingest and load data
Topic 2: Maintain a data analytics solution	25–30	• 1. Use Dataflows Gen2 to transform data • 2. Ingest data from various sources • 3. Load data into lakehouses and warehouses
		- Clean and transform data
		• 1. Perform data enrichment and validation • 2. Process data using Spark notebooks and SQL • 3. Manage data quality and consistency
Topic 3: Implement and manage semantic models	25–30	- Manage analytics development lifecycle
		• 1. Perform impact analysis and dependency management • 2. Implement deployment pipelines • 3. Configure version control and projects
		- Implement security and governance
		• 1. Configure workspace and item-level access • 2. Use sensitivity labels and endorsement • 3. Apply row-level, column-level, and object-level security
		- Deploy and maintain semantic models
		• 1. Create reusable assets and shared models • 2. Monitor and refresh semantic models • 3. Use XMLA endpoint for deployment and management
		- Design and build semantic models
		• 1. Create Power BI semantic models • 2. Optimize model performance and structure • 3. Define relationships, hierarchies, and measures

DP-600 Download Pdf - DP-600 Free Exam Dumps

All these three DP-600 exam questions formats are easy to use and compatible with all devices, operating systems, and web browsers. Just choose the best DP-600 exam questions format and start Microsoft DP-600 exam preparation without wasting further time. As far as the price of Implementing Analytics Solutions Using Microsoft Fabric exam practice test questions is concerned, these exam practice test questions are being offered at a discounted price. Get benefits from DP-600 Exam Questions at discounted prices and download them quickly. Best of luck in DP-600 exam and career!!!

Microsoft Implementing Analytics Solutions Using Microsoft Fabric Sample Questions (Q42-Q47):

NEW QUESTION # 42

You have a Fabric tenant that contains a semantic model. The model contains data about retail stores.

You need to write a DAX query that will be executed by using the XMLA endpoint. The query must return the total amount of sales from the same period last year.

How should you complete the DAX expression? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

EVALUATE

VAR _LYSales =

RET

RETURN

LYSales

[Total Sales]

[LYSales]

VAR

Microsoft

Answer:

Explanation:

Answer Area

EVALUATE

VAR _LYSales =

RET

RETURN

LYSales

[Total Sales]

[LYSales]

VAR

Microsoft

Explanation:

First blank: CALCULATE

Second blank: _LYSales

Step 1 - Defining the variable

We want to calculate sales for the same period in the prior year. The correct function here is CALCULATE, because it allows applying a filter context modification (with SAMEPERIODLASTYEAR).

So:

VAR _LYSales =

CALCULATE ([Total Sales], SAMEPERIODLASTYEAR (' Orders ' [Order Date])) Step 2 - Returning the value We then need to RETURN the value of the variable. From the dropdown options, we select _LYSales.

So:

EVALUATE

VAR _LYSales =

CALCULATE ([Total Sales], SAMEPERIODLASTYEAR (' Orders ' [Order Date])) RETURN ROW ("LastYearSales ", _LYSales) Note: In XMLA DAX queries, you usually need a table expression, so wrapping with ROW or SELECTCOLUMNS is common, but based on the provided answer box, just returning _LYSales is sufficient here.

Final Answer:

First blank: CALCULATE

Second blank: _LYSales

NEW QUESTION # 43

You have source data in a CSV file that has the following fields:

* SalesTransactionID

- * SaleDate
- * CustomerCode
- * CustomerName
- * CustomerAddress
- * ProductCode
- * ProductName
- * Quantity
- * UnitPrice

You plan to implement a star schema for the tables in WH1. The dimension tables in WH1 will implement Type 2 slowly changing dimension (SCD) logic.

You need to design the tables that will be used for sales transaction analysis and load the source data.

Which type of target table should you specify for the CustomerName, CustomerCode, and SaleDate fields?

To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

CustomerCode:

CustomerName:

SaleDate:

Answer:

Explanation:

Answer Area

CustomerCode:

CustomerName:

SaleDate:

Explanation:

Answer Area

Customer Code: Dimension

Customer Name: Dimension

Sale Date: Dimension

NEW QUESTION # 44

You have a Microsoft Fabric tenant that contains a dataflow.

You are exploring a new semantic model.

From Power Query, you need to view column information as shown in the following exhibit.

Which three Data view options should you select? Each correct answer presents part of the solution. NOTE: Each correct answer is worth one point.

- A. Enable details pane
- B. Enable column profile
- C. Show column quality details
- D. Show column profile in details pane
- E. Show column value distribution

Answer: A,B,C

Explanation:

To view column information like the one shown in the exhibit in Power Query, you need to select the options that enable profiling and display quality and distribution details. These are: A. Enable column profile - This option turns on profiling for each column, showing statistics such as distinct and unique values. B. Show column quality details - It displays the column quality bar on top of each column showing the percentage of valid, error, and empty values. E. Show column value distribution - It enables the histogram display of value distribution for each column, which visualizes how often each value occurs.

NEW QUESTION # 45

Note: This section contains one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem. You must determine whether the solution meets the stated goals. More than one solution in the set might solve the problem. It is also possible that none of the solutions in the set solve the problem.

After you answer a question in this section, you will NOT be able to return. As a result, these questions do not appear on the Review Screen.

Your network contains an on-premises Active Directory Domain Services (AD DS) domain named contoso.com that syncs with a Microsoft Entra tenant by using Microsoft Entra Connect.

You have a Fabric tenant that contains a semantic model.

You enable dynamic row-level security (RLS) for the model and deploy the model to the Fabric service.

You query a measure that includes the username () function, and the query returns a blank result.

You need to ensure that the measure returns the user principal name (UPN) of a user.

Solution: You create a role in the model.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION # 46

Drag and Drop Question

You have a Fabric lakehouse named Lakehouse1.

You have the data sources shown in the following table.

Name	Description
Datasource1	• Contains data from an Azure SQL managed instance that has change data capture (CDC) enabled for all tables. • Has a daily data load that is more than 500,000 rows and 20 GB.
Datasource2	• Contains data from a manufacturing machine that includes the item count, item weight, and item volume. • Contains data that is streamed to an Azure event hub in Azure.

You need to ingest data from both data sources into Lakehouse1. The solution must minimize maintenance and development time.

What should you use to ingest the data into each data source? To answer, drag the appropriate options to the correct data sources.

Each option may be used once, more than once, or not at all.

You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Options	Answer Area
A Dataflow Gen1	Datasource1: Option
A Dataflow Gen2	Datasource2: Option
A notebook	
A pipeline with a Copy activity	
An eventstream	

Answer:

Explanation:

Options	Answer Area
A Dataflow Gen1	Datasource1: A Dataflow Gen2
A notebook	Datasource2: An eventstream
A pipeline with a Copy activity	

Explanation:

Box 1: ADLS Gen2

Contains data from an Azure SQL managed instance that has a change data capture (CDC) enabled for all tables.

Has a daily data load that is more than 500,000 rows and 20 GB.

Change data capture in Azure Data Factory and Azure Synapse Analytics.

Auto incremental extraction in mapping data flow.

The newly updated rows or updated files can be automatically detected and extracted by ADF mapping data flow from the source stores. When you want to get delta data from the databases, the incremental column is required to identify the changes. When you want to load new files or updated files only from a storage store, ADF mapping data flow just works through files' last modify time.

Box 2: An eventstream

Contains data from a manufacturing machine that includes the item count, item weight, and item volume.

Contains data that is streamed to an Azure event hub in Azure.

NEW QUESTION # 47

.....

We have always been known as the superior after sale service provider, since we all tend to take lead of the whole process after you choose our DP-600 exam questions. So you have no need to trouble about our DP-600 learning guide. Our DP-600 training materials will continue to pursue our passion for better performance and comprehensive service of DP-600 Exam. Our worldwide after sale staff will be online and reassure your rows of doubts as well as exclude the difficulties and anxiety with all the customers. Just let us know your puzzles and we will figure out together.
