For customers who are bearing pressure of work or suffering from career crisis, AD0-E725 learn tool of inferior quality will be detrimental to their life, render stagnancy or even cause loss of salary. So choosing appropriate AD0-E725 test guide is important for you to pass the exam. One thing we are sure, that is our AD0-E725 Certification material is reliable. With our high-accuracy AD0-E725 test guide, our candidates can become sophisticated with the exam content. You only need to spend 20-30 hours practicing with our AD0-E725 learn tool, passing the exam would be a piece of cake.

Adobe AD0-E725 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Section 1: Architecture: This section of the exam measures the skills of Backend Developers and covers the core structural concepts of Adobe Commerce. It involves demonstrating effective cache implementation, understanding key code components like plugins and observers, and managing multi-site configurations on a single instance. The domain also includes explaining the use of Git patches, critical security features, the CRON scheduling system, and how indexing functions within the platform.
Topic 2	<ul style="list-style-type: none">Customizations: This section of the exam measures the skills of Solutions Engineers and involves modifying and extending platform functionality. This includes customizing core areas like the product catalog, checkout process, and admin panel, as well as manipulating data entities, customizing APIs, working with message queues, and writing integration tests to ensure code quality and functionality.
Topic 3	<ul style="list-style-type: none">Cloud: This section of the exam measures the skills of Cloud Architects and covers the deployment and management of Adobe Commerce on cloud infrastructure. It requires explaining the fundamental cloud architecture, performing setup and configuration tasks, and utilizing the Adobe Commerce Cloud CLI tool to manage the environment effectively.

Topic 4	<ul style="list-style-type: none"> • External Integrations: This section of the exam measures the skills of Integration Specialists and focuses on connecting Adobe Commerce with external SaaS services. It encompasses the skills needed to customize data flows, utilize Adobe App Builder for extensibility, and implement Adobe I • O events and webhooks to create automated and connected business processes.

Reliable AD0-E725 Exam Registration & Exam AD0-E725 Pass4sure

It seems that it's a terrible experience for some candidates to prepare and take part in the AD0-E725 Exam, we will provide you the AD0-E725 training materials to help you pass it successfully. The AD0-E725 training materials have the knowledge points, it will help you to command the knowledge of the Adobe Commerce Developer Expert. The pass rate is above 98%, which can ensure you pass it. If you have the Desktop version, it stimulates the real environment, you can know the exact situation about the exam, and your nervous for it will be reduced.

Adobe Commerce Developer Expert Sample Questions (Q12-Q17):

NEW QUESTION # 12

A Developer using API Mesh is assigned to optimize the integration of several third-party APIs with Adobe Commerce. Part of this task is to address performance issues such as the n+1 problem. In this scenario, which option should the Developer implement?

- A. Use API Mesh batching to combine multiple API requests into a single query.
- B. Use API Mesh to replace the existing APIs with direct GraphQL queries.
- C. Use API Mesh as a middleware for aggregating data from APIs back into Adobe Commerce.

Answer: A

NEW QUESTION # 13

An Adobe Commerce Expert is tasked with implementing a custom condition on salable quantity with reservations. The condition needs to be applicable only when added to cart. Which option should the Developer implement?

- A. XML

```
<type name="Magento\InventoryApi\Model\Stock\ValidatorChain">
  <arguments>
    <argument name="validators" xsi:type="array">
      <item name="is_salable_with_reservations" xsi:type="object">
        >Vendor\InventorySales\Model\Stock\Validator\IsSalableWithReservationsValidator</item>
      </item>
    </argument>
  </arguments>
</type>
```
- B. XML

```
<virtualType name="IsProductSalableForRequestedQtyConditionChainOnAddToCart">
  <arguments>
    <argument name="conditions" xsi:type="array">
      <item name="is_salable_with_reservations" xsi:type="array">
        <item name="object" xsi:type="object">
          >Vendor\InventorySales\Model\IsProductSalableForRequestedQtyCondition\IsSalableWithReservationsC
        </item>
      </item>
    </argument>
  </arguments>
</virtualType>
```
- C. XML

```
<preference for="
```

```
Magento\InventorySales\Model\ProductSalableForRequestedQtyCondition\IsSalableWithReservationsC type="
Vendor\InventorySales\Model\ProductSalableForRequestedQtyCondition\IsSalableWithReservationsCo
/>
```

Answer: B

NEW QUESTION # 14

An Adobe Commerce Developer creates a before plugin for the save() method from the Magento\Framework\App\Cache\Proxy class to manipulate cache identifiers and data before it is saved to the cache storage.

An example of the class code is shown below:

```
namespace Magento\Framework\App\Cache;
use Magento\Framework\App\Cache\CacheInterface;
use Magento\Framework\ObjectManager\NoninterceptableInterface;
class Proxy implements
CacheInterface,
NoninterceptableInterface
{
...
public function save($data, $identifier, $tags = [], $lifeTime = null)
{
return $this->getCache()->save($data, $identifier, $tags, $lifeTime);
}
...
}
```

Why is the plugin not working as expected?

- A. An around plugin defined for the same function prevents the execution.
- B. An after plugin defined for the same function affects the results.
- **C. The plugin cannot be created for this class.**

Answer: C

Explanation:

Comprehensive and Detailed Explanation (with official references):

The correct answer is A. The plugin cannot be created for this class.

The reason is that Magento\Framework\App\Cache\Proxy implements the NoninterceptableInterface.

* Any class that implements the NoninterceptableInterface in Magento is excluded from the plugin system

* This means no before, after, or around plugins can be applied to methods of such classes.

* Magento uses this mechanism to protect critical classes (like Proxy classes, Factories, and other infrastructure code) from being intercepted, as doing so could introduce performance or stability issues.

Therefore, the developer's plugin for the save() method does not work, because plugins are not allowed on this class by design.

Options B and C are incorrect because:

* Another plugin (after/around) does not block the execution in this case; the class itself is simply non- interceptable.

Official Documentation Extracts:

* "Plugins cannot be applied to final classes, final methods, non-public methods, or classes that implement Magento\Framework\ObjectManager\NoninterceptableInterface."- Adobe Commerce DevDocs: Plugins limitations

* "Classes implementing NoninterceptableInterface cannot be intercepted. This interface is used to mark classes that must not be extended through the plugin mechanism"- Magento Framework Reference:

NoninterceptableInterface

NEW QUESTION # 15

A Developer is working on a new controller in the admin panel. Per requirements, it must be accessible only for specific admin users. According to best practices, how should the Developer secure access to the new controller?

- A. Implement isAllowed method from AuthorizationInterface and check the result for a custom ACL resource.
- **B. Override ADMIN_RESOURCE constant with a value for a custom ACL (Access Control List) resource.**
- C. Override _isAllowed method and check the authorization result for a custom ACL resource.

Answer: B

Explanation:

The best practice is to use the ADMIN_RESOURCE constant in the controller. This constant defines the ACL resource that controls access to the controller. Magento automatically checks the ACL resource against the current admin user's permissions.

A is unnecessary because ACL checking is built-in and tied to ADMIN_RESOURCE.

C is a legacy method (_isAllowed) used in Magento 1; in Magento 2, the constant override is the proper way.

Reference:

Adobe Commerce DevDocs - Admin controllers and ACL

NEW QUESTION # 16

A Developer using API Mesh is assigned to optimize the integration of several third-party APIs with Adobe Commerce. Part of this task is to address performance issues such as the n+1 problem.

In this scenario, which option should the Developer implement?

- A. Use API Mesh batching to combine multiple API requests into a single query.
- B. Use API Mesh to replace the existing APIs with direct GraphQL queries.
- C. Use API Mesh as a middleware for aggregating data from APIs back into Adobe Commerce.

Answer: A

Explanation:

The n+1 problem occurs when multiple queries are made individually instead of being grouped, leading to inefficient performance. API Mesh batching solves this by combining multiple GraphQL requests into a single query, reducing round trips and improving response times.

A is incorrect: API Mesh does not "replace" APIs but orchestrates them.

C is partially correct but too general; aggregation alone does not solve the n+1 problem.

B is correct: batching specifically addresses n+1 query performance issues.
