Scrum SAFe Product Owner/Product Manager POPM (6.0) Sample Questions (Q27-Q32):

NEW QUESTION # 27

In the Continuous Exploration phase of the Continuous Delivery Pipeline, what is a key activity performed by Product Managers and Product Owners?

- A. Ensure the Architecture team has sufficient capacity
- B. Prioritize the Team Backlog
- C. Hypothesize what would create value for Customers
- D. Negotiate Supplier contracts

Answer: C

Explanation:

The SAFe POPM workbook describes Continuous Exploration as the phase used to understand Customer needs . The Continuous Exploration model includes the activities Hypothesize, Collaborate and Research, Architect, and Synthesize , with Product Management involved in that flow. Therefore, the key activity is to hypothesize what would create value for Customers .

NEW QUESTION # 28

What increases the effectiveness of System Demos?

- A. Spend a lot of time preparing for the demo
- B. Limit team attendance to minimize disruptions to the team
- C. Consider how and what to demo during Iteration Planning
- D. Focus on team-level Metrics

Answer: C

Explanation:

Explanation

Considering how and what to demo during Iteration Planning increases the effectiveness of System Demos, which are events that provide an integrated view of new features delivered by the Agile Release Train (ART) in each Iteration¹². By thinking ahead of how and what to demo, the teams can:

*Align on the product vision and roadmap and ensure that the work items are aligned with the customer value and the PI objectives¹².

*Define clear and testable acceptance criteria for each work item and plan how to verify them in the demo¹².

*Identify and resolve any dependencies, risks, or impediments that may affect the demo¹².

*Prepare the demo environment and the necessary tools and data to support the demo¹².

*Practice the demo and rehearse the script and the roles of the presenters¹².

Some additional information that might be helpful for you are:

*The other options (A, B, and C) are not actions that increase the effectiveness of System Demos, but rather actions that may

reduce it.

*Spending a lot of time preparing for the demo may not be effective, as it may take away time and focus from the actual development and testing of the work items. Instead, the teams should aim for continuous integration and built-in quality practices that enable them to demo the work items as soon as they are done¹².

*Limiting team attendance to minimize disruptions to the team may not be effective, as it may reduce the feedback and collaboration opportunities that the demo provides. Instead, the teams should invite and engage all the relevant stakeholders, such as Business Owners, executive sponsors, other Agile Teams, development management, and customers, to the demo¹².

*Focusing on team-level metrics may not be effective, as it may not reflect the true value and progress of the integrated work across the ART. Instead, the teams should focus on system-level metrics, such as PI objectives, solution quality, and customer satisfaction, to evaluate the outcome and impact of the demo¹².

NEW QUESTION # 29

Which Product Owner responsibility supports the team with value delivery?

- A. Testing benefit hypotheses
- **B. Fostering Built-in Quality**
- C. Understanding market forces
- D. Supporting the Architectural Runway

Answer: B

Explanation:

Fostering Built-in Quality is a Product Owner responsibility that supports the team with value delivery. Built-in Quality is one of the four core values of SAFe and it means that every aspect of the solution is continuously verified for quality¹. The Product Owner fosters Built-in Quality in the following ways:

* Collaborating with the Development team and other stakeholders to define clear and testable acceptance criteria for each work item².

* Participating in team events such as Iteration Planning, Backlog Refinement, and Iteration Review to provide feedback and guidance on the quality of the work².

* Reviewing and approving the work items that meet the Definition of Done and the acceptance criteria².

* Encouraging the team to apply Agile testing practices such as Test-First, Test-Driven Development, and Behavior-Driven Development³.

* Supporting the team's continuous integration and continuous delivery practices to ensure fast and frequent feedback on the quality of the solution³.

Some additional information that might be helpful for you are:

* The other options (A, B, and C) are not Product Owner responsibilities that support the team with value delivery, but rather responsibilities that belong to other roles or activities.

* Understanding market forces is a responsibility of Product Management, who is accountable for the market and business aspects of the solution⁴.

* Supporting the Architectural Runway is a responsibility of System Architects/Engineers, who provide technical guidance and enablement to the teams.

* Testing benefit hypotheses is an activity that occurs in the Continuous Exploration step of the Continuous Delivery Pipeline, where Product Owners and Product Managers collaborate to validate their assumptions about the customer and the solution.

NEW QUESTION # 30

What is one strategy for managing complex critical path challenges?

- A. Distribute work to other teams
- B. Sequence work to eliminate same Iteration dependencies
- C. Allocate work between teams based on forecasted capacity
- **D. Adjust work between teams or split Features and Stories**

Answer: D

NEW QUESTION # 31

What is one step when determining initial team capacity during PI Planning?

- A. Subtract one point for every team member's vacation day, public holiday, or training day
- B. Ensure Product Owner/Product Manager approval for all time-based capacity adjustments
- C. Add together all of the points from recently completed Features
- D. Compare final team capacity across all teams

Answer: A

Explanation:

Explanation

One step when determining initial team capacity during PI Planning is to subtract one point for every team member's vacation day, public holiday, or training day. This step helps the team to adjust their capacity based on the actual availability of each team member for the upcoming Program Increment (PI)1. By accounting for the time-based capacity adjustments, the team can plan their work more realistically and avoid overcommitting or underdelivering2.
