**Answer: B**

#### **NEW QUESTION # 288**

What is the difference between using the Call and Branch methods in an activity step to invoke other activities?

Response:

- **A. Call returns to the originating activity, while Branch skips the remainder of the originating activity.**
- B. Call provides more robust debugging capability than Branch, while Branch provides better run-time performance.
- C. Branch overrides the security restrictions of the called activity allowing you to easily test code; it will not run in production.
- D. Branch creates a new thread to allow asynchronous processing, while Call runs in the thread from it was invoked.

**Answer: A**

#### **NEW QUESTION # 289**

The purpose of a Circumstance Template is to \_\_\_\_\_.

Response:

- A. define the values used in a circumstance
- **B. define the properties used in a circumstance**
- C. provide a template for business users to change circumstances when completing a task
- D. provide a list of all potential circumstances in one place

**Answer: B**

#### **NEW QUESTION # 290**

You are building an application with several development teams. Requirements state that the respective support contact name from each team appears on the header of the application as it moves through the various development phases.

What configuration best allows you to accomplish this requirement?

Response:

- A. Create multiple applications, one for each development phase that lists the appropriate support contact name on the header. Release a new application for each development phase.
- **B. Create a new Application Settings configuration entering the appropriate support contact names for each respective development phase. Direct the header to reference the Application Settings to display the support contact name.**
- C. Configure a When condition to update the the support contact name depending on what production phase the application is in. Have your application display the appropriate name value sourced from conditional logic.

- D. Configure a data transform to populate the appropriate support contact name for each respective development phase. Update the data transform as each production phase changes and direct the application's header to use the name value sourced from the data transform.

**Answer: B**
