## Cisco Certified Design Expert (CCDE v3.0) Written Exam Sample Questions (Q227-Q232):

### NEW QUESTION # 227

An MPLS service provider is offering a standard EoMPLS-based VPLS service to Customer A, providing Layer 2 connectivity between a central site and approximately 100 remote sites. Customer A wants to use the VPLS network to carry its internal multicast video feeds which are sourced at the central site and consist of 20 groups at Mbps each. Which service provider recommendation offers the most scalability?

- A. Use a mesh of GRE tunnels to carry the streams between sites
- B. EoMPLS-based VPLS can carry multicast traffic in a scalable manner
- C. Enable snooping mechanisms on the provider PE routers
- D. Replace VPLS with a Layer 3 MVPN solution to carry the streams between sites

**Answer: D**

Explanation:

VPLS replicates multicast streams as multiple unicast streams, causing scalability problems with high-bandwidth multicast sources. The most scalable solution is:

\* Replace VPLS with a Layer 3 MVPN (Multicast VPN): MVPN provides efficient multicast replication in the provider core, dramatically reducing bandwidth consumption compared to Layer 2 replication.

Why other options are incorrect:

- \* A: VPLS handles multicast poorly at scale because of head-end replication.
- \* B: GRE tunnels are operationally complex and do not scale efficiently for large deployments.
- \* C: IGMP snooping may help locally but does not solve replication inefficiency in the core.
