New JN0-253 Real Exam - 100% Pass Quiz JN0-253 Mist AI, Associate (JNCIA-MistAI) First-grade Test Preparation

When you first contact our software, different people will have different problems. Maybe you are not comfortable with our JN0-253 exam question and want to know more about our products and operations. As long as you have questions, you can send e-mail to us, we have online staff responsible for ensuring 24-hour service to help you solve all the problems about our JN0-253 Test Prep. After you purchase our JN0-253 quiz guide, we will still provide you with considerate services. Maybe you will ask whether we will charge additional service fees.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q95-Q100):

NEW QUESTION # 95

What are two guest portal authentication options in the UI? (Choose two.)

- A. MAC Authentication
- **B. Sponsored Guest**
- **C. Authentication Code**
- D. SAML

Answer: B,C

Explanation:

In Juniper Mist Cloud, guest access is managed through the Guest Portal feature, which allows administrators to configure secure and flexible authentication methods for temporary or visitor access. These options are designed to provide a balance between user convenience and network security.

According to the Juniper Mist Guest Access and Captive Portal Configuration Guide, the supported authentication options include: "Authentication Code (Self-registration) and Sponsored Guest workflows, among others, which provide different levels of administrative control and ease of use."

* Authentication Code (A): Visitors receive a temporary authentication code (PIN) via email or SMS that they use to log in. This method is ideal for self-service access while maintaining accountability.

* Sponsored Guest (C): In this mode, guests must be approved by a designated employee or sponsor before gaining access. This adds an extra layer of security by involving internal personnel validation.

MAC Authentication (B) and SAML (D) are not used for guest portals; they are designed for device-based authentication and enterprise-level identity federation, respectively.

NEW QUESTION # 96

What happens to the captured data after a packet capture is stopped or completed?

- A. It is automatically discarded due to limited storage space.
- **B. It is saved as a downloadable capture file for offline inspection.**
- C. It triggers alerts based on detected issues within the captured traffic.
- D. It remains permanently in the cloud for continuous analysis.

Answer: B

Explanation:

The packet capture feature in Juniper Mist Cloud allows administrators to remotely capture live network traffic from managed devices such as Access Points (APs) or switches for detailed troubleshooting.

According to the Juniper Mist Network Troubleshooting and Diagnostics Guide:

"Once a packet capture session is stopped or completed, the captured data is saved as a downloadable .pcap file that can be analyzed offline using tools such as Wireshark." This ensures administrators can inspect packet-level details for issues such as authentication failures, DHCP errors, or connectivity drops. The data is stored temporarily and made available through the Mist UI for download before automatic cleanup.

Options B, C, and D are incorrect because captured data is not stored permanently in the cloud, does not trigger automated alerts, and is not discarded immediately. The purpose is to make the data accessible for offline inspection and analysis.

Therefore, the correct answer is A. It is saved as a downloadable capture file for offline inspection.

NEW QUESTION # 97

Which operation does an HTTP POST perform?

- A. write
- B. delete
- **C. create**
- D. read

Answer: C

Explanation:

An HTTP POST operation performs the "create" function in web communications. This method sends data to a server to create a

new resource. For example, when you submit a form on a website, the data is sent to the server using a POST request, which then creates a new entry in the database.

NEW QUESTION # 98

Which two statements correctly describe Mist organizations and sites? (Choose two.)

- A. Multiple sites may be contained within a single organization.
- B. Multiple organizations may be contained within a single site.
- C. An organization is contained within a site.
- D. A site is contained within an organization.

Answer: A,D

Explanation:

In the Mist architecture, an organization is a higher-level entity that can contain multiple sites.

A site is contained within an organization: Each site operates under the umbrella of an organization, allowing centralized management and policy enforcement.

Multiple sites may be contained within a single organization: This structure enables organizations to manage and monitor different geographical locations or different business units within a single centralized framework.

This hierarchical structure facilitates scalable and organized network management.

NEW QUESTION # 99

Which language is used to execute Marvis queries in the Mist UI?

- A. Structured Query Language (SQL)
- B. Python
- C. Natural Language
- D. C++

Answer: C

Explanation:

Understanding Marvis Queries:

Marvis is the AI-driven virtual network assistant in Mist that helps with queries and troubleshooting.

Language Used for Queries:

Natural Language: Marvis is designed to understand and respond to natural language queries, making it user-friendly.

Python, C++, SQL: These are programming and query languages not used directly for Marvis queries.

NEW QUESTION # 100

.....

The Certified Production and JN0-253 certification is a valuable credential earned by individuals to validate their skills and competence to perform certain job tasks.
