

# User-Friendly Microsoft AZ-104 Exam Questions in PDF Format

Exact Questions Microsoft - AZ-104

- Create a storage account named storage5 and configure storage replication for the Blob service.
- Create an NSG named NSG1 that will have the custom inbound security rules shown in the following table.

Priority	Port	Protocol	Source	Destination	Action
500	3389	TCP	10.0.2.0/24	Any	Deny
1000	Any	ICMP	Any	VirtualNetwork	Allow

- Associate NSG1 to the network interface of VM1.
- Create an NSG named NSG2 that will have the custom outbound security rules shown in the following table.

Priority	Port	Protocol	Source	Destination	Action
200	3389	TCP	10.0.0.0/16	VirtualNetwork	Deny
400	Any	ICMP	10.0.2.0/24	10.0.1.0/24	Allow

- Associate NSG2 to VNET1/Subnet2.

**Technical Requirements**

Contoso must meet the following technical requirements:

- Create container1 and share1.
- Use the principle of least privilege.
- Create an Azure AD security group named Group4.
- Back up the Azure file shares and virtual machines by using Azure Backup.
- Trigger an alert if VM1 or VM2 has less than 20 GB of free space on volume C.
- Enable User1 to create Azure policy definitions and User2 to assign Azure policies to RG1.
- Create an internal Basic Azure Load Balancer named LB1 and connect the load balancer to VNET1/Subnet1.
- Enable flow logging for IP traffic from VM5 and retain the flow logs for a period of eight months.
- Whenever possible, grant Group4 Azure role-based access control (Azure RBAC) read-only permissions to the Azure file shares.

**QUESTION NO 1 HOTSPOT**

You need to create container1 and share1.

Which storage accounts should you use for each resource? To answer, select the appropriate options in the answer area.

Only exact questions will Pass You in Exam 4 of 22

Our web-based practice exam software is an online version of the Microsoft AZ-104 practice test. It is also quite useful for instances when you have internet access and spare time for study. To study and pass the certification exam on the first attempt, our Microsoft AZ-104 Practice Test software is your best option. You will go through Microsoft AZ-104 exams and will see for yourself the difference in your preparation.

The AZ-104 certification exam is intended for individuals who have a solid understanding of cloud computing and have experience in managing Azure resources. AZ-104 exam covers a wide range of topics, including Azure virtual machines, storage solutions, networking, security, and monitoring. AZ-104 Exam also tests the candidate's ability to manage Azure subscriptions and resources, configure and manage virtual networks, and monitor and troubleshoot Azure resources.

## Useful AZ-104 Dumps, AZ-104 VCE Exam Simulator

We offer free demos and updates if there are any for your reference beside real AZ-104 real materials. By downloading the free demos you will catch on the basic essences of our AZ-104 guide question and just look briefly at our practice materials you can feel the thoughtful and trendy of us. About difficult or equivocal points, our experts left notes to account for them. To fill the void, we simplify the procedures of getting way, just place your order and no need to wait for arrival of our AZ-104 Exam Dumps or make reservation in case people get them all, our practice materials can be obtained with five minutes.

## Available Job Roles for Certified Specialists

Microsoft Certified: Azure Administrator Associate is a sought-after certification that opens the door to the entry-level Cloud job roles. The core position that the holders of this certificate can apply for is an Azure Administrator. These specialists are responsible for implementing, monitoring, and maintaining Microsoft Azure solutions, including main services associated with network, compute, security, and storage. According to ZipRecruiter.com, the average salary of such a professional in the United States ranges from \$26,000 to \$185,000 per annum.

The Microsoft AZ-104 Exam covers a wide range of topics, including Azure infrastructure management, Azure storage solutions, Azure virtual networks, Azure compute, Azure security, and Azure identity management. Candidates are required to have a solid understanding of Azure services and the ability to design, deploy, and manage Azure resources. This includes configuring virtual machines, managing Azure subscriptions and resources, implementing and managing storage solutions, and securing Azure environments.

## Microsoft Azure Administrator Sample Questions (Q312-Q317):

### NEW QUESTION # 312

You have an Azure subscription named Subscription1. Subscription1 contains two Azure virtual machines named VM1 and VM2. VM1 and VM2 run Windows Server 2016.

VM1 is backed up daily by Azure Backup without using the Azure Backup agent.

VM1 is affected by ransomware that encrypts data.

You need to restore the latest backup of VM1.

To which location can you restore the backup? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

### Answer:

Explanation:

Box 1 : VM1 and VM2 only

When recovering files, you can't restore files to a previous or future operating system version. You can restore files from a VM to the same server operating system, or to the compatible client operating system. Therefore -

"VM1 and VM2 only" is the best answer since both run on Windows Server 2016.

"A new Azure virtual machine only", this will also work but why to create unnecessary new VM in Azure if existing VM will do the task. So this option is incorrect.

Box 2 : VM1 or A new Azure virtual machine only

When restoring a VM, you can't use the replace existing VM option for encrypted VMs. This option is only supported for unencrypted managed disks. And also You can restore files from a VM to the same server operating system, or to the compatible client operating system only. Hence "VM1 or A new Azure virtual machine only" is correct answer.

<https://docs.microsoft.com/en-us/azure/backup/backup-azure-restore-files-from-vm#system-requirements>

### NEW QUESTION # 313

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure subscription that contains the virtual machines shown in the following table.

You deploy a load balancer that has the following configurations:

\* Name: LB1

\* Type: Internal

\* SKU: Standard

\* Virtual network: VNET1

You need to ensure that you can add VM1 and VM2 to the backend pool of LB1.

Solution: You create two Standard public IP addresses and associate a Standard SKU public IP address to the network interface of each virtual machine.

Does this meet the goal?

- A. No
- B. Yes

**Answer: A**

Explanation:

Explanation

A Backend Pool configured by IP address has the following limitations:

\* Standard load balancer only

Reference:

<https://docs.microsoft.com/en-us/azure/load-balancer/backend-pool-management>

### NEW QUESTION # 314

You have an Azure virtual network named VNet1 that connects to your on-premises network by using a site- to-site VPN. VNet1 contains one subnet named Subnet1.

Subnet1 is associated to a network security group (NSG) named NSG1. Subnet1 contains a basic internal load balancer named ILB1. ILB1 has three Azure virtual machines in the backend pool.

You need to collect data about the IP addresses that connects to ILB1. You must be able to run interactive queries from the Azure portal against the collected data.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1: An Azure Log Analytics workspace

In the Azure portal you can set up a Log Analytics workspace, which is a unique Log Analytics environment with its own data repository, data sources, and solutions.

Box 2: NSG1

NSG flow logs allow viewing information about ingress and egress IP traffic through a Network security group. Through this, the IP addresses that connect to the ILB can be monitored when the diagnostics are enabled on a Network Security Group.

We cannot enable diagnostics on an internal load balancer to check for the IP addresses.

As for Internal LB, it is basic one. Basic can only connect to storage account. Also, Basic LB has only activity logs, which doesn't include the connectivity workflow. So, we need to use NSG to meet the mentioned requirements.

### NEW QUESTION # 315

You have two Azure virtual machines as shown in the following table.

You create the Azure DNS zones shown in the following table.

You perform the following actions:

To fabrikam.com, you add a virtual network link to vnet1 and enable auto registration.

For contoso.com, you assign vm1 and vm2 the Owner role.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

### NEW QUESTION # 316

You have an Azure Active Directory (Azure AD) tenant named contosocloud.onmicrosoft.com.

Your company has a public DNS zone for contoso.com.

You add contoso.com as a custom domain name to Azure AD.

You need to ensure that Azure can verify the domain name.

Which type of DNS record should you create?

- A. MX
- B. RRSIG
- C. NSEC3
- D. PTR

**Answer: A**

Explanation:

Explanation

TXT or MX : Correct

You can use either a TXT or MX record to verify the custom domain in the Azure AD. MX records can serve the purpose of TXT records

SRV : Incorrect

SRV records are used by various services to specify server locations. When specifying an SRV record in Azure DNS DNSKEY : Incorrect Choice This will verify that the records are originating from an authorized sender.

NSEC : Incorrect Choice

This is Part of DNSSEC. This is used for explicit denial-of-existence of a DNS record. It is used to prove a name does not exist.
