## Guaranteed Analytics-Admn-201 Success - Vce Analytics-Admn-201 Format

If you haplessly fail the Analytics-Admn-201 exam, we treat it as our blame then give back full refund and get other version of practice material for free. In contrast we feel as happy as you are when you get the desirable outcome and treasure every breathtaking moment of your review. If you still feel bemused by our Analytics-Admn-201 Exam Questions, contact with our courteous staff who will solve your problems any time and they will give you the right advices on our Analytics-Admn-201 study materials.

## Salesforce Certified Tableau Server Administrator Sample Questions (Q53-

## Q58):

### NEW QUESTION # 53

You have an installation of Tableau Server and a site that are configured to use default settings. What should you do to ensure that the users on the site can set up data-driven alerts?

- A. Enable data-driven alerts on the Tableau Services Manager Configuration page
- B. No action is necessary: the default settings enable data-driven alerts for the site
- C. Run the tsm configuration set -k dataAlerts.checkIntervallInMinutes -v 60 command
- **D. Change the data-driven alerts setting on the new site's Settings page**

**Answer: D**

Explanation:

Data-driven alerts in Tableau Server allow users to receive notifications when data in a view meets certain conditions (e.g., a sales metric exceeds a threshold). By default, this feature is disabled for a site unless explicitly enabled by an administrator.

Option C (Change the data-driven alerts setting on the new site's Settings page): This is the correct answer. In the Tableau Server web interface, a site administrator can navigate to the site's Settings > General page and enable the option "Let users create data-driven alerts." This must be done manually because the default setting for a new site is disabled. Once enabled, users with appropriate permissions (e.g., Viewer, Explorer, or Creator roles) can create alerts on views they have access to.

Option A (Enable data-driven alerts on the TSM Configuration page): This is incorrect because the TSM Configuration page (accessed via the TSM web UI or CLI) manages server-wide settings like ports, authentication, and processes, not site-specific features like data-driven alerts.

Option B (Run the tsm configuration set -k dataAlerts.checkIntervallInMinutes -v 60 command): This is incorrect. The dataAlerts.checkIntervallInMinutes key controls how frequently Tableau Server checks alert conditions (default is 60 minutes), but it does not enable the feature itself. The feature must first be turned on at the site level.

Option D (No action is necessary): This is incorrect because the default setting for data-driven alerts is off for new sites, requiring explicit action to enable it.

Reference: Tableau Server Documentation - "Configure Data-Driven Alerts" ([https://help.tableau.com/current/server/en-us/data\\_alerts.htm](https://help.tableau.com/current/server/en-us/data_alerts.htm)).

### NEW QUESTION # 54

What should you do to disable table recommendations for popular data sources and tables to users?

- A. Disable the option using the server Settings page
- B. Use the command: tsm configuration set -k recommendations.enabled -v false
- **C. Disable the option using the site Settings page**
- D. Publish data sources only to projects with permissions locked to the project

**Answer: C**

Explanation:

Table recommendations in Tableau Server suggest popular tables and data sources to users when they create new content in the web authoring environment. This feature is enabled by default but can be disabled at the site level.

Option A (Disable the option using the site Settings page): Correct. A site administrator can disable table recommendations by navigating to the site's Settings > General page in the Tableau Server web interface and unchecking the option "Enable table recommendations." This prevents users on that site from seeing these suggestions, offering a straightforward UI-based solution.

Option B (Use the command: tsm configuration set -k recommendations.enabled -v false): Incorrect. There is no recommendations.enabled key in the TSM configuration settings. This feature is managed per site, not server-wide via TSM.

Option C (Publish data sources only to projects with permissions locked): Incorrect. Locking permissions restricts access but doesn't disable the recommendation feature itself. Users with access would still see recommendations.

Option D (Disable the option using the server Settings page): Incorrect. Table recommendations are a site-specific setting, not a server-wide setting. The server Settings page (via TSM) controls global configurations, not this feature.

Reference: Tableau Server Documentation - "Manage Site Settings" ([https://help.tableau.com/current/server/en-us/site\\_settings.htm](https://help.tableau.com/current/server/en-us/site_settings.htm)).

### NEW QUESTION # 55

What Tableau Server authentication method should you configure to use OpenID Connect?

- A. Kerberos
- **B. SAML**
- C. Active Directory
- D. Local Authentication

**Answer: B**

Explanation:

Tableau Server supports multiple authentication methods, including Local Authentication, Active Directory, Kerberos, SAML, and OpenID Connect. OpenID Connect (OIDC) is an identity layer built on OAuth 2.0, commonly used for single sign-on (SSO). In Tableau Server, OIDC is implemented as a variant of SAML (Security Assertion Markup Language) authentication because both are SSO protocols managed through the same configuration workflow.

To use OpenID Connect:

- \* Configure Tableau Server for SAML/SSO.
- \* Provide an OIDC-compatible identity provider (IdP) configuration (e.g., Google, Okta).
- \* Set up the IdP metadata and certificates in TSM.
- \* Option D (SAML): Correct. Tableau Server treats OIDC as a subset of its SAML authentication framework, so you configure it under the SAML settings in TSM.
- \* Option A (Local Authentication): Incorrect. Local Authentication uses Tableau's internal user database, not an external SSO protocol like OIDC.
- \* Option B (Kerberos): Incorrect. Kerberos is a network authentication protocol for Windows environments, unrelated to OIDC.
- \* Option C (Active Directory): Incorrect. AD uses LDAP or Kerberos, not OIDC, for authentication.

Reference: Tableau Server Documentation - "Configure SAML and OpenID Connect" ([https://help.tableau.com/current/server/en-us/saml\\_config.htm](https://help.tableau.com/current/server/en-us/saml_config.htm)).

## NEW QUESTION # 56

A user published a workbook ten days ago. The user can see the workbook on the Server, but she is unable to find the workbook by using Search. What should you do to resolve the problem?

- A. Instruct the user to re-publish the workbook with keywords
- **B. Run the tsm maintenance reindex-search command**
- C. Instruct the user to log out, and then log back in
- D. Instruct the user to add tags to the workbook

**Answer: B**

Explanation:

Tableau Server's search functionality relies on an indexed catalog of content (workbooks, data sources, etc.) stored in the Repository. If a user can see a workbook in the UI (e.g., under Content > Workbooks) but not find it via search, the search index may be outdated or corrupted. This can happen due to:

- \* Indexing delays after publishing.
- \* Server maintenance or crashes affecting the index.
- \* Option D (Run the tsm maintenance reindex-search command): Correct. This command rebuilds the search index, ensuring all content (including the user's workbook) is properly cataloged and searchable. Steps:
  - \* Stop Tableau Server (tsm stop).
  - \* Run tsm maintenance reindex-search.
  - \* Start Tableau Server (tsm start). This is a server administrator task and resolves systemic search issues.
- \* Option A (Re-publish the workbook with keywords): Incorrect. Re-publishing might update the index for that workbook, but it doesn't fix a broader indexing problem. Keywords enhance relevance, not indexing itself.
- \* Option B (Add tags to the workbook): Incorrect. Tags improve searchability but don't address an index failure. If the workbook isn't indexed, tags won't help.
- \* Option C (Log out, and then log back in): Incorrect. This refreshes the user session but doesn't affect the server-side search index.

Why This Matters: A reliable search index is critical for content discovery in large deployments-reindex- search ensures consistency.

Reference: Tableau Server Documentation - "Reindex Search" ([https://help.tableau.com/current/server/en-us/cli\\_maintenance\\_tsm.htm#reindex-search](https://help.tableau.com/current/server/en-us/cli_maintenance_tsm.htm#reindex-search)).

## NEW QUESTION # 57

Your deployment of Tableau Server uses Active Directory authentication. What statement correctly describes the process of importing a group from Active Directory?

- **A. New users created as a result of importing a group are assigned the site role specified during the import**
- B. Importing a group from Active Directory requires a .csv file that lists user IDs
- C. If an imported group contains any users that have Tableau Server accounts, their site role will be changed to match the site role specified during the import
- D. You can change the name of a group during import, although this will not change the group's name in Active Directory

**Answer: A**

Explanation:

Importing an AD group into Tableau Server syncs user management-let's analyze the process and options:

\* AD Group Import Process:

\* How: In the UI (Users > Groups > Add Group > Active Directory), enter the AD group name, set a site role, and sync.

\* Behavior:

\* Existing Users: If a user is already in Tableau Server, their site role remains unchanged unless manually adjusted-sync applies the minimum role only if it upgrades access.

\* New Users: Added to Tableau with the site role specified during import.

\* Config: Requires AD authentication enabled in TSM.

\* Option D (New users created are assigned the site role specified during import): Correct.

\* Details: When importing (e.g., "SalesTeam" group, site role: Explorer):

\* New users get Explorer.

\* Existing users keep their role unless it's below Explorer (e.g., Unlicensed # Explorer).

\* Why: Ensures consistent onboarding-new users align with the group's intended access.

\* Option A (Existing users' roles change to match import): Incorrect.

\* Why: Existing roles persist unless lower than the minimum-e.g., Viewer stays Viewer if import sets Explorer, but Unlicensed upgrades. Not a full overwrite.

\* Option B (Requires a .csv file): Incorrect.

\* Why: AD import uses live sync via LDAP-no .csv needed (that's for local auth imports).

\* Option C (Change group name during import): Incorrect.

\* Why: The AD group name is fixed-you can't rename it in Tableau during sync (it mirrors AD).

Post-import renaming is possible but not part of the process.

Why This Matters: Accurate AD sync ensures seamless user management-missteps can disrupt access or licensing.

Reference: Tableau Server Documentation - "Synchronize Active Directory Groups" ([https://help.tableau.com/current/server/en-us/groups\\_sync.htm](https://help.tableau.com/current/server/en-us/groups_sync.htm)).

## NEW QUESTION # 58

.....

Getting more certifications are surely good things for every ambitious young man. It not only improves the possibility of your life but also keep you constant learning. Test ability is important for personal. But if you are blocked by this exam, our Salesforce Analytics-Admn-201 Valid Exam Practice questions may help you. If you have only one exam unqualified so that you can't get the certification. Our Analytics-Admn-201 valid exam practice questions will help you out. We guarantee you 100% pass in a short time.

**Guaranteed Analytics-Admn-201 Success:** <https://www.prepawaytest.com/Salesforce/Analytics-Admn-201-practice-exam-dumps.html>

If we don't have confidence to pass exam by yourselves our Analytics-Admn-201 exams questions and answers can help you find your study target and lead you to pass exams easily, Salesforce Latest Analytics-Admn-201 Test Questions Homeschooling, to plenty of moms and dads, will likely be a method of give their little ones the very best on the subject of their education, Salesforce Latest Analytics-Admn-201 Test Questions If your purpose is passing exams and getting a certification.

Because this dataset is getting more attention, the Census is working Vce Analytics-Admn-201 Format to make it more complete and timely, Every router knows about every network in the area, and each router has the same topological database.

## Pass Guaranteed 2026 High Hit-Rate Analytics-Admn-201: Latest Salesforce Certified Tableau Server Administrator Test Questions

If we don't have confidence to pass exam by yourselves our Analytics-Admn-201 Exams questions and answers can help you find your study target and lead you to pass exams easily.

Homeschooling, to plenty of moms and dads, will likely be a method of Analytics-Admn-201 give their little ones the very best on the subject of their education, If your purpose is passing exams and getting a certification.

In preparing the Analytics-Admn-201 qualification examination, the Analytics-Admn-201 study materials will provide users with the most important practice materials, Our Analytics-Admn-201 exam training' developers to stand in the perspective of candidate and meet the conditions for each user to tailor their Analytics-Admn-201 learning materials.
