The D-ISM-FN-01 study guide to good meet user demand, will be a little bit of knowledge to separate memory, every day we have lots of fragments of time, such as waiting in line to take when you eat, or time in buses commute on the way by subway every day, but when you add them together will be surprised to find a day we can make use of the time is so much debris. We have three version of our D-ISM-FN-01 Exam Questions which can let you study at every condition so that you can make full use of your time. And you will get the D-ISM-FN-01 certification for sure.

EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q54-Q59):

NEW QUESTION # 54

Question:

What is an advantage of deploying intelligent storage systems in the data center?

- A. Reduces the amount of data to replicate, migrate, and back up
- B. Reduces the complexity of managing information by creating silos of storage
- C. Enables efficient and optimized storage and management of information
- D. Migrates data from a data center to the cloud at no cost

Answer: C

Explanation:

Intelligent storage systems incorporate advanced features like automated tiering, deduplication, and compression. These features enable efficient storage utilization and optimized management by automating data placement and reducing manual intervention.

* Option A: While intelligent systems may facilitate cloud integration, they do not guarantee cost-free migration.

* Option B: Data reduction features help, but the primary advantage is broader efficiency and optimization.
* Option C: Creating silos increases complexity; intelligent systems aim to unify and simplify storage management.

NEW QUESTION # 55

Question:

What is the most common technique used by malware protection software to detect malware?

- A. Reputation-based analysis
- **B. Signature-based detection**
- C. Heuristic analysis
- D. Behavioral analysis

Answer: B

Explanation:

Signature-based detection is the most common method of malware detection. It works by comparing files and data to a database of known malware signatures:

Fast and efficient for known threats.

Updated regularly by security vendors.

* Reputation-based: Looks at the trustworthiness of files/domains.

* Behavioral: Monitors actions and identifies suspicious patterns.

* Heuristic: Detects new malware based on file behaviors and patterns, useful for unknown threats.

NEW QUESTION # 56

Question:

An organization wants to consume compute, network, and storage resources through a self-service portal.
Which cloud service model provides this capability?

- **A. Infrastructure as a Service**
- B. Data as a Service
- C. Software as a Service
- D. Platform as a Service

Answer: A

Explanation:

Infrastructure as a Service (IaaS) is a cloud computing model that provides virtualized computing resources over the internet. It offers fundamental infrastructure services such as compute, storage, and networking, which users can provision and manage through a self-service portal. This model allows organizations to scale resources as needed and pay only for what they use.

NEW QUESTION # 57

Question:

A backup array was able to achieve a 30:1 reduction by finding multiple copies of the same data. Which method was used in this scenario?

- A. Data replication
- B. Data compression
- C. Data encryption
- **D. Data deduplication**

Answer: D

Explanation:

Data deduplication is a technique that eliminates redundant copies of data, storing only unique instances.

When multiple copies of the same data are found, deduplication replaces them with references to a single stored copy, significantly

reducing storage requirements.

* Data replication: Involves copying data to another location for redundancy, not reducing storage size.

* Data encryption: Secures data but doesn't affect storage size.

* Data compression: Reduces data size by encoding information more efficiently but doesn't eliminate duplicates.

NEW QUESTION # 58

Question:

What is the maximum number of VLANs that can be supported with one VLAN tag field?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

In Ethernet networking, VLANs (Virtual Local Area Networks) are identified using a 12-bit VLAN ID field in the IEEE 802.1Q standard. Since 12 bits can represent $2^{12} = 4096$ unique values, the maximum number of VLANs that can be supported is 4096.

* 1024 and 2048: These values are less than the maximum and represent subsets of possible VLANs.

* 8192: This exceeds the 12-bit limit and is not supported by the standard.
