Sie wird weltweit als ein Markenzeichen für Exzellenz im Bereich des Produktmanagements anerkannt und kann Einzelpersonen dabei helfen, ihre Karriere voranzutreiben und ihr Verdienstpotezial zu erhöhen.

Scrum Professional Scrum Product Owner II PSPO-II Prüfungsfragen mit Lösungen (Q39-Q44):

39. Frage

What percent of the time should a Product Owner dedicate to the Scrum Team?
(choose the best two answers)

- A. Enough time to ensure that the product Increment is valuable and useful.
- B. Just enough time to keep the Developers from complaining.
- C. Enough time to avoid the waste that is created by delaying answers to the Developers.
- D. As much as the stakeholders want to budget. Business analysts take over the role the rest of the time.
- E. 100%.
- F. 40%, or more if the stakeholders agree.

Antwort: A,C

Begründung:

B is correct because the Product Owner is accountable for maximizing the value of the product and the work of the Developers1,

and delaying answers to the Developers can cause waste, rework, and missed opportunities². E is correct because the Product Owner is responsible for ensuring that the product Increment is valuable and useful for the stakeholders and customers³, and this requires close collaboration and feedback with the Scrum Team and the users⁴. A is incorrect because the Product Owner does not need to dedicate 100% of their time to the Scrum Team, as they also have other accountabilities such as engaging with the market, managing the product vision, and aligning with the business strategy⁵. C is incorrect because the Product Owner is not a proxy for the stakeholders, and they should not delegate their role to business analysts or anyone else. D is incorrect because the Product Owner does not need the approval of the stakeholders to decide how much time they spend with the Scrum Team, as they are empowered to make the best decisions for the product. F is incorrect because the Product Owner should not base their time allocation on the complaints of the Developers, but on the value and quality of the product.

40. Frage

Which of the following activities should a Product Owner never do? (choose the best answer)

- A. Decide when to release the product increment
- B. Establish a Product Goal
- C. Accept work done during the Sprint
- **D. Dictate the Sprint Goal**

Antwort: D

41. Frage

Which activities will a Product Owner likely engage in during a Sprint? (choose the best three answers)

- A. Update the Sprint burndown chart.
- **B. Reorder items in the Product Backlog**
- **C. Gather information and opinions from Stakeholders**
- D. Run the Daily Scrum
- E. Prioritize the Developer's tasks.
- **F. Answer questions from the Developers about items in the current Sprint.**

Antwort: B,C,F

42. Frage

What are the attributes of a good Product Vision and Strategy? (choose all that apply)

- **A. It describes how the product will generate revenue**
- **B. It describes how people will use the product to achieve outcomes.**
- **C. It describes who will use the product and what they would like to achieve**
- **D. It describes how the product compares to competitor products**

Antwort: A,B,C,D

43. Frage

Which of the following statements is true about the Product Vision?
(choose the best answer)

- A. None of the above.
- B. It must be completely free from discussions about strategic technology choices.
- **C. It evolves as the Scrum Team learns more about customers and their needs.**
- D. All of the above.
- E. It is the shared responsibility of the Scrum Team to develop and evolve.

Antwort: C

Begründung:

* Option A is the best answer because it reflects the agile and empirical nature of Scrum and Product Ownership. The Product

Vision is a concise and inspiring statement that describes the purpose, direction, and value proposition of the product¹. The Product Vision is not a fixed or static document, but rather an emergent and dynamic one that adapts to the changing environment, needs, and feedback. The Product Owner is accountable for creating and communicating the Product Vision to the Scrum Team and the stakeholders². The Product Owner collaborates with the Scrum Team and the stakeholders to inspect and adapt the Product Vision based on the new insights, opportunities, and learnings that arise from the changing environment³⁴. The Product Owner also uses various techniques, such as product discovery, user research, market analysis, and experiments, to validate and refine the Product Vision⁵.

* Option B is not the best answer because it contradicts the accountability of the Product Owner. The Product Owner is the sole person responsible for managing the Product Backlog and maximizing the value of the product and the work of the Scrum Team. The Product Owner is also the sole person responsible for creating and communicating the Product Vision to the Scrum Team and the stakeholders². The Product Owner may seek input and feedback from the Scrum Team and the stakeholders, but the final decision and authority on the Product Vision belongs to the Product Owner.

The Scrum Team and the stakeholders are not accountable for developing and evolving the Product Vision, but they are expected to understand and support it.

* Option C is not the best answer because it contradicts the reality and complexity of product development. The Product Vision is not a technical specification, but rather a strategic and business-oriented statement that guides the development of the product¹. The Product Vision does not prescribe how the product should be built, but rather why and what the product should achieve. However, the Product Vision is not completely detached from the technical aspects of the product, as the technology choices may have an impact on the feasibility, desirability, and viability of the product. The Product Owner should be aware of the strategic technology choices and their implications, and discuss them with the Development Team and the stakeholders, as part of the product discovery and validation process.
