Get 100% Real Exam 156-551 Questions, Accurate & Verified Answers As Seen in the 156-551 Exam!

In order to meet different needs for 156-551 exam bootcamp, three versions are available. You can choose the most suitable one according to your own exam needs. All three have free demo for you to have a try before buying. 156-551 PDF version is printable, you can study them anytime. 156-551 Soft test engine supports MS operating system, and have two modes for practice, and it can also stimulate the real exam environment, therefore, this version can build you exam confidence. 156-551 Online test engine is convenient to learn, and it also supports offline practice.

CheckPoint Check Point Certified VSX Specialist - R81 (CCVS) Sample Questions (Q98-Q103):

NEW QUESTION # 98

What are the advantages of VSLS over traditional HA clustering? (Choose two)

- A. Greater resource utilization
- B. Per-VS failover and load distribution
- C. Enhanced session inspection
- D. Automatic firmware upgrades

Answer: A,B

Explanation:

VSLS enables distribution of Virtual Systems across multiple nodes, unlike traditional HA where all workloads are on the active node. This maximizes performance and allows fault isolation at the VS level, improving efficiency.

NEW QUESTION # 99

Which steps are required to create a new Virtual System (VS) using SmartConsole? (Choose two)

- A. Define a policy package
- B. Enable HTTPS Inspection
- C. Assign a management IP
- D. Configure VSID

Answer: A,D

Explanation:

When creating a new Virtual System, administrators must define a policy package that the VS will use and assign a unique VSID (Virtual System ID). These are essential to managing and identifying the VS in the VSX infrastructure.

NEW QUESTION # 100

Which file stores crash or core dump data on a VSX Gateway?

- A. /var/core/
- B. /tmp/diag/core.elg
- C. /var/log/crash
- D. /var/log/messages

Answer: A

Explanation:

The /var/core/ directory stores crash dumps and core files generated during process failures.

Reviewing these is key when investigating unexpected service terminations or memory-related issues in VSX environments.

NEW QUESTION # 101

What is a prerequisite before converting a physical Security Gateway to a VSX Gateway?

- A. Establishing SIC between Gateway and Management Server
- B. Enabling SNMP on the Gateway
- C. Backup of the Smart Dashboard database
- D. Ensuring ClusterXL is disabled

Answer: A

Explanation:

Before converting a Security Gateway to a VSX Gateway, you must first establish a Secure Internal Communication (SIC) trust between the Gateway and the Security Management Server.

This is mandatory for successful provisioning and object synchronization.

NEW QUESTION # 102

Which command shows current routing tables inside a Virtual System?

- A. vsx routeview
- B. netstat -nr
- C. vsenv then ip route show
- D. route show

Answer: C

Explanation:

To view the routing table for a specific VS, enter its context using vsenv, then run ip route show.

This ensures you're retrieving routing information from the correct namespace associated with that VS.
