- A. True
- B. False

Answer: A

NEW QUESTION # 75

An enterprise user uses a dedicated line to connect the VPC on Huawei Cloud and the IDC network under the cloud. An FTP Server is deployed on the ECS in the VPC. Now the IDC under the cloud needs to access the FTP Server, but the service must pass the specified IP (It is not provided in the 10.0.0.0/8, 172.16.0.0/12, 192.168.0.0/16 network segment). How does the enterprise administrator need to configure to meet this requirement?

- A. Use the specified IP to configure the sub-interface in the ECS operating system, add a custom routing entry in the VPC, configure the destination address to the specified IP, configure the next hop to the ECS, and turn off the "source/destination check" of the corresponding ECS switch.
- B. Use the NAT gateway service to convert the ECS IP with FTP Server deployed to the specified IP.
- C. The demand cannot be met through the existing capabilities of the public cloud.
- D. Use the specified IP to create EC and deploy FTP-Server in ECS

Answer: B

NEW QUESTION # 76

.....
