Pass Guaranteed Quiz HCLSoftware - HCL-HWA-ADM-102 - HCLSoftware Certified Administrator- HWA 10.2 Authoritative Exam Dumps

HCL-HWA-ADM-102 certifications are thought to be the best way to get good jobs in the high-demanding market. There is a large range of HCL-HWA-ADM-102 certifications that can help you improve your professional worth and make your dreams come true. Our HCL-HWA-ADM-102 Certification Practice materials provide you with a wonderful opportunity to get your dream certification with confidence and ensure your success by your first attempt.

HCLSoftware Certified Administrator- HWA 10.2 Sample Questions (Q86-Q91):

NEW QUESTION # 86

An HCL Workload Automation administrator wants to adjust how the Dynamic Workload Console displays table data on the Monitor Workload page for different user roles. A power user insists that column customization should apply across all pages, including the new Orchestration Monitor page, but this does not seem to be the case. How does table customization behavior actually work in the Dynamic Workload Console 10.2.0?

- A. Table customization is disabled by default and must be enabled for each page individually via server configuration
- **B. Table customization in user settings applies only to the Monitor Workload page and does not affect the Orchestration Monitor page**
- C. Table customization affects only the Orchestration Monitor page and not the Monitor Workload page
- D. Table customization applies globally to all pages, including Orchestration Monitor, once saved in user settings

Answer: B

Explanation:

The Dynamic Workload Console release notes indicate that table customization configured in user settings is applied to the Monitor Workload page only and does not impact the new Orchestration Monitor page. This means that users can adjust which columns appear and their order in Monitor Workload views, but these preferences are not propagated to Orchestration Monitor views, which may have their own layout behavior. Expecting global customization across all monitoring pages conflicts with the documented limitation for version 10.2.0.

NEW QUESTION # 87

Dynamic agent HCL HWA 10.2 JobManager gateway 31114 stable but netman NetReq.msg LINK failure prevents ssmagent startup. agent.dynamic.gateway.jmFullyQualifiedHostname verified. What SSL parameter mismatch blocks netman-ssmagent linkage?

- A. T(netmanPoll)=3 aggressive
- B. jmKeystore expired
- C. enBrokerRetry=YES excessive
- **D. agent.dynamic.gateway.sslTruststore mismatch**

Answer: D

Explanation:

agent.dynamic.gateway.sslTruststore mismatch blocks netman NetReq.msg LINK despite correct jmFullyQualifiedHostname/port 31114, preventing ssmagentmonman initialization; correcting truststore alignment restores dynamic agent workstation processes without unrelated broker retry or poll adjustments.

NEW QUESTION # 88

Deploying HCL HWA 10.2 ruleset across dynamic agents fails: "RULE_VERSION_MISMATCH". Agents v10.2.0.1, ruleset v10.2.1. What conman command upgrades agent rule engine compatibility?

- A. conman "syncruleversion @"
- **B. conman "deployrule -force @"**
- C. conman "makeruleplan -upgrade"
- D. conman "upgraderuleengine @-version<10.2.1"

Answer: B

Explanation:

Force deployment overrides version checks. conman deployrule -force BACKUP_RULES @ bypasses agent version validation installing latest rule engine. Agents process v10.2.1 rules correctly post-upgrade.

NEW QUESTION # 89

Scenario: Uninstalling backup MDM after failover recovery in 10.2. Critical step missed causing issues?

- A. Removing primary workstation definition
- **B. Not switching back to primary first**
- C. Forgetting to stop app server
- D. Not backing up properties
- E. Deleting shared database

Answer: B

Explanation:

Uninstalling while still acting as master causes plan corruption or conflicts upon primary restart.

NEW QUESTION # 90

Scenario: On a fault-tolerant agent in HCL Workload Automation 10.2 running on Linux, job execution suddenly stops despite the agent being linked. Investigation shows jobman is not running, but mailman is active. Which processes must be verified or restarted to restore full agent functionality without unlinking? (Select three)

- A. Verify netman is running and restart if necessary
- B. Check writer process status
- C. Run comman startapps on the agent
- D. Restart jobman using startjobman script
- E. Restart momman for event monitoring

Answer: A,D

Explanation:

Restart jobman using startjobman script directly launches the job execution process responsible for running jobs locally. Verify netman is running and restart if necessary ensures the communication gateway is operational, as jobman depends on netman for receiving instructions from mailman. The writer process is internal to mailman and not separately managed.

NEW QUESTION # 91

.....

The study material is available in three easy-to-access formats. The first one is PDF format which is printable and portable. You can access it anywhere with your smart devices like smartphones, tablets, and laptops. In addition, you can even print PDF questions in order to study anywhere and pass HCLSoftware Certified Administrator- HWA 10.2 (HCL-HWA-ADM-102) certification exam.
