each C_CPI_2506 practice torrent in our online store before the listing, are subject to stringent quality checks within the company. Just focus on spending the most practice to use our C_CPI_2506 test materials. After careful preparation, I believe you will be able to pass the exam. This is a wise choice, after using our C_CPI_2506 Exam Question, you will realize your dream of a promotion. Therefore, when you are ready to review the exam, you can fully trust our C_CPI_2506 practice torrent, choose our learning materials. If you don't want to miss out on such a good opportunity, buy it quickly!

SAP C_CPI_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 2	<ul style="list-style-type: none">• Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.

Topic 3	<ul style="list-style-type: none"> • SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 4	<ul style="list-style-type: none"> • SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.

Pass Guaranteed SAP - C_CPI_2506 Useful Valid Test Bootcamp

NewPassLeader offers you a full refund if you are not able to pass the C_CPI_2506 certification exams after preparing with our products. The high quality of C_CPI_2506 certification exam preparation products increases your success probability and reduces the chances of failure. The C_CPI_2506 exam preparation products contain all the features to make you ready for embracing success in a first attempt. These C_CPI_2506 Exam Preparation products are updated regularly for guaranteed success. Free demo is also offered to the users for checking the C_CPI_2506 exam preparation products quality.

SAP Certified Associate - Integration Developer Sample Questions (Q14-Q19):

NEW QUESTION # 14

What is a characteristic of a product in the API Management capability within SAP Integration Suite?

- A. It is a separate artifact and is required for basic authentication.
- B. It encapsulates the API provider.
- **C. It is deployed as a separate artifact on the API business hub enterprise.**

Answer: C

Explanation:

In the context of the API Management capability within SAP Integration Suite, a product is a logical entity that groups and encapsulates one or more APIs, API proxies, or API providers to expose them to consumers in a controlled and manageable way. The key characteristic of a product is that it encapsulates the API provider, allowing developers to bundle related APIs, define access policies, and manage their lifecycle for specific use cases or consumers. Why Option C is Correct:

* Role of a Product in SAP API Management: In SAP Integration Suite's API Management capability, a product serves as a container that encapsulates the API provider (the backend system or service exposing the APIs) and its associated APIs or API proxies. This encapsulation allows for centralized management of access, security policies (e.g., authentication, rate limiting), and monetization settings.

Products enable API providers to be exposed to consumers (e.g., developers or applications) in a structured manner, often through the API Business Hub Enterprise or developer portals.

* SAP Reference: According to the SAP Integration Suite - API Management Guide on the SAP Help Portal, a product is defined as "a collection of APIs that are grouped together to provide a specific business capability or service to API consumers." It encapsulates the API provider's endpoints and applies policies to manage access and usage. For example, a product might encapsulate an API provider for an SAP S/4HANA system, exposing APIs like SalesOrder or Customer to external applications.

* Practical Usage: In SAP API Management, an Integration Developer creates a product in the API Portal, associates it with an API provider (e.g., an SAP backend system or a third-party service), and configures policies such as OAuth or API key authentication. The product is then published to the API Business Hub Enterprise or a developer portal, where consumers can discover and subscribe to it.

Why Other Options are Incorrect:

* A. It is deployed as a separate artifact on the API business hub enterprise: While products are published to the API Business Hub Enterprise (or a custom developer portal) for discovery by consumers, they are not deployed as separate artifacts. In SAP API Management, an artifact refers to entities like API proxies or integration flows, whereas a product is a logical grouping of APIs and their providers, not a standalone deployable entity. The product is managed within the API Portal and exposed via the hub, but it is

not "deployed" as an artifact.

* B. It is a separate artifact and is required for basic authentication: A product is not a separate artifact, nor is it specifically required for basic authentication. Basic authentication is a policy that can be applied to an API or API proxy within a product, but it is not a defining characteristic of the product itself. Products are about encapsulation and management of APIs, not about enforcing a specific authentication mechanism like basic authentication.

SAP Integration Developer Workflow Example:

* Create API Provider: In the SAP Integration Suite's API Portal, the developer defines an API provider, specifying the backend system (e.g., an SAP Gateway service or a third-party REST service) and its connection details.

* Develop API Proxies: Create API proxies that expose specific endpoints of the API provider, applying policies like security or rate limiting.

* Create a Product: Group one or more API proxies under a product in the API Portal, configuring access policies and usage limits. For example, a "Customer Management" product might encapsulate APIs for customer data retrieval and updates.

* Publish to API Business Hub Enterprise: Publish the product to the API Business Hub Enterprise or a custom developer portal, where consumers can discover and subscribe to it.

* Consumer Access: External applications or developers subscribe to the product, receiving credentials (e.g., API keys or OAuth tokens) to access the encapsulated APIs.

References:

SAP Help Portal: SAP Integration Suite - API Management Guide - "API Products" section, which describes products as entities that encapsulate API providers and their APIs to manage access and exposure to consumers.

SAP API Management Developer Guide: Details the process of creating and managing products, emphasizing their role in encapsulating API providers and applying policies.

SAP Community Blogs: Articles like "Getting Started with SAP API Management" explain how products are used to bundle APIs and expose them via the API Business Hub Enterprise.

SAP Integration Suite Documentation: Highlights the role of products in facilitating controlled access to API providers in integration scenarios.

NEW QUESTION # 15

Which combination of event-driven architecture (EDA) patterns is supported by SAP Event Mesh?

- A. Publish/Subscribe and Point-to-Point event-driven architecture patterns
- B. Request/Reply and Message Queuing event-driven architecture patterns
- C. Choreography and Orchestration event-driven architecture patterns
- D. Publish/Subscribe and Event Sourcing event-driven architecture patterns

Answer: A

Explanation:

SAP Event Mesh supports:

Publish/Subscribe # A single event published by a producer can be consumed by multiple subscribers.

Point-to-Point (Queue-based) # Messages sent directly from producer to consumer via queues.

Other options are incorrect:

Event Sourcing is not part of SAP Event Mesh capabilities.

Request/Reply is synchronous, not the main EDA pattern.

Choreography/Orchestration are higher-level process design concepts, not the eventing patterns.

NEW QUESTION # 16

What can you do in the Cloud Integration capability within SAP Integration Suite? Note: There are 2 correct answers to this question

- A. Develop complex integration scenarios in Python.
- B. Connect to different cloud runtime environments.
- C. Develop custom adapters.
- D. Connect to multiple endpoints.

Answer: C,D

Explanation:

In the Cloud Integration capability within SAP Integration Suite, you can do the following things:

Connect to multiple endpoints. You can use various adapters and protocols to connect to different systems and applications, such as

SAP S/4HANA, Salesforce, SuccessFactors, and more.

Develop custom adapters. You can use the Adapter Development Kit (ADK) to create your own adapters for specific integration scenarios and requirements. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 17

In the Cloud Integration capability within SAP Integration Suite, which internal message format is used?

- A. XSLT
- B. JSON
- C. XML

Answer: C

Explanation:

In the Cloud Integration capability within SAP Integration Suite, XML is the internal message format that is used. XML stands for Extensible Markup Language and is a standard format for representing structured data. All messages that are processed by the Cloud Integration capability are converted to XML internally and then transformed to the desired format at the outbound channel. Reference: Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 18

You want to publish a new API product to the API business hub enterprise. What is a requirement?

- A. At least one deployed API Provider
- B. At least two deployed API Providers
- C. At least two deployed API Proxies
- D. At least one deployed API Proxy

Answer: D

Explanation:

To publish a new API product to the API business hub enterprise, you need at least one deployed API proxy as a requirement. An API proxy is an API that acts as an intermediary between an API provider and an API consumer. It can be used to add security, monitoring, caching, transformation, and other features to the API provider. An API product is a bundle of one or more API proxies that are grouped together for a specific business scenario or use case. To create an API product, you need to select one or more deployed API proxies from your API portal and provide some metadata, such as name, title, description, quota limits, and so on. Then you can publish your API product to the API business hub enterprise, which is a centralized platform for discovering, consuming, and managing APIs. Reference: Create an API Proxy | SAP Help Portal, Create a Product | SAP Help Portal

NEW QUESTION # 19

.....

We always strictly claim for our C_CPI_2506 study materials must be the latest version, to keep our study materials up to date, we constantly review and revise them to be at par with the latest SAP syllabus for C_CPI_2506 exam. This feature has been enjoyed by over 80,000 takes whose choose our study materials. The one who choose our study materials that consider our website as the top preparation material seller for C_CPI_2506 Study Materials, and inevitable to carry all candidates the finest knowledge on exam syllabus contents. Not only that, we will provide you a free update service within one year from the date of purchase, in order to keep up the changes in the exam so that every candidates who purchase our C_CPI_2506 study materials can pass the exam one time.
