### NEW QUESTION # 67

File based discovery is automatically activated for all users?

Response:

- A. Administration
- B. Event management
- C. Asset management
- D. **Discovery**

**Answer: D**

### NEW QUESTION # 68

Which of the below is NOT a level of the IT Operations Management (ITOM) Product Suite?

Response:

- A. **Corporate**
- B. Enterprise
- C. Standard
- D. Professional

**Answer: A**

### NEW QUESTION # 69

Which choices best describe what is necessary to create a custom horizontal pattern to discover an operating system that is not discovered by the base installation patterns? (Choose two.)

- A. Select a CI Type
- B. Define Process Strategy
- C. **Select Application Pattern Type**
- D. **Select Infrastructure Pattern Type**

**Answer: C,D**

Explanation:

### NEW QUESTION # 70

For what is File Based Discovery used?

- A. To discover the contents of flat files such as configuration files
- B. To discover that file names conform to a defined naming standard
- C. **To discover file paths to recognize the signature of installed software**
- D. To discover the checksum of a file and store it to track for changes

**Answer: C**

#### Explanation:

File Based Discovery is used to discover file paths to recognize the signature of installed software. File Based Discovery helps to identify what software is running on Windows and UNIX servers and devices by scanning the file system for specific files or directories that indicate the presence of a software product<sup>1</sup>. File Based Discovery can also check the file size, version, and checksum of the discovered files to verify the software installation<sup>2</sup>. File Based Discovery can be configured using file signatures, which are patterns that match the file paths of software products<sup>3</sup>.

#### NEW QUESTION # 71

Which choices are necessary to launch any pattern? (Choose two.)

- A. CI Classification
- B. CI Serial Number Attribute
- C. Data Certification
- D. CI Type

**Answer: A,D**

#### Explanation:

To launch any pattern, you need to specify the CI classification and the CI type. The CI classification determines the table where the discovered CI is stored in the CMDB, and the CI type defines the specific attributes and relationships of the CI. For example, if you want to discover a Windows server, you need to select the CI classification as cmdb\_ci\_win\_server and the CI type as Windows Server. These choices are mandatory for any pattern, as they enable Discovery to identify and classify the CIs correctly.
