And we know more on the Sharing-and-Visibility-Architect Exam Dumps, so we can give better suggestions according to your situation.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q27-Q32):

NEW QUESTION # 27

Universal Containers (UC) has 200 distributors that use Partner Community licenses. Partners cannot see each other's data, but UC is also trying to give more visibility to data for certain individuals at a distributor.

Which scalable option give users in the partner manager role access to all case and container records for partner users at the same distributor?

- A. Create an ownership based sharing rule.
- B. Create sharing sets.
- C. Give Super User permission to the individual partner manager users.

Answer: C

Explanation:

* Super User Permission: In Salesforce, the "Super User" permission allows partner community users in specific roles (such as

Partner Managers) to access records owned by or shared with users within their partner account. This is an effective and scalable solution for giving partner manager users access to all case and container records for users at the same distributor.

* Why Option B is Correct: Granting Super User permissions is straightforward, scalable, and avoids complex configurations such as ownership-based sharing rules or sharing sets.

* Why Others Are Incorrect:

* Option A: Ownership-based sharing rules are not ideal because they do not accommodate scalability and flexibility across multiple distributors.

* Option C: Sharing sets provide access based on the account relationship, but they are limited in scope compared to the flexibility provided by Super User permissions.

For detailed information on Super User permissions, refer to the Salesforce documentation on Partner Communities:

NEW QUESTION # 28

A custom invoice object has been created with a master-detail relationship to account. The Account Receivable (AR) team needs access to Invoices AR users do not own or have access to Account records.

Account OWD is set to Private. The AR team is unable to find Invoices in List views, Reports, nor in Global Search. The Architect has been asked to help troubleshoot. What could be the issue preventing AR team members from seeing invoices?

- A. The AR team profile needs to be assigned an Invoice Page layout.
- B. A sharing rule is missing to share Invoices to the AR team.
- C. A sharing rule is missing to share Accounts to the AR team.
- D. The Accounts receivable profile does not have read Permission to the Invoice Object.

Answer: C

Explanation:

Explanation

A sharing rule is missing to share Accounts to the AR team, which could be the issue preventing AR team members from seeing invoices. Since invoice is a custom object with a master-detail relationship to account, its sharing settings are controlled by its parent account. If AR users do not have access to account records, they will not be able to see or query invoice records either. Option A is incorrect, since a sharing rule to share invoices to the AR team would not work, as invoice inherits its sharing settings from account. Option B is incorrect, since assigning an invoice page layout to the AR team profile would not affect their visibility of invoice records. Option D is incorrect, since giving read permission to the invoice object to the Accounts receivable profile would not grant access to invoice records that are owned by other users.

NEW QUESTION # 29

Universal Containers has Controlled by Parent sharing settings on the Contact object and Public Read Only sharing settings on Account, Opportunity, and Case objects. Which two options can the user see while adding Account team members to the Account?

- A. Opportunity Access
- B. Activity Access
- C. Case Access
- D. Contact Access

Answer: A,C

Explanation:

Explanation

Two options that the user can see while adding account team members to the account are case access and opportunity access. This is because these are the two objects that have public read only sharing settings and allow users to specify different levels of access for account team members. Contact access and activity access are not options because these objects have controlled by parent sharing settings and inherit their access from the account

NEW QUESTION # 30

The finance team at Universal Containers usually does not have access to account and contact records. A finance analyst was temporarily given opportunity access for a big deal to help with tax calculation. However, she can now also access account and contact records.

What is causing this issue?

- A. Contact records can be accessed due to implicit sharing from Opportunity.
- B. Account records can be accessed due to Role Hierarchy.
- **C. Account records can be accessed due to implicit sharing from Opportunity.**

Answer: C

Explanation:

* Implicit Sharing:

* Salesforce provides implicit sharing for parent-child relationships. For example, access to an Opportunity record implicitly grants access to its parent Account record.

* Why Option A is Correct:

* Since the finance analyst has access to an Opportunity, she also gains implicit access to the related Account record because of the parent-child relationship.

* Why Others Are Incorrect:

* Option B: Role Hierarchy does not directly affect this situation unless explicitly configured.

* Option C: Contact records are not directly accessible via implicit sharing from Opportunity but can be accessed through their relationship to the Account.

For detailed information, refer to Salesforce Implicit Sharing documentation: <https://help.salesforce.com/>

NEW QUESTION # 31

Universal Containers has a Private Sharing Model for the Opportunity object. Sales Rep A at Universal Containers created the Opportunity record and then transferred ownership of the Opportunity record to Sales Rep B. Both Sales Rep A and B have the same role in the Role Hierarchy.

What access will Sales Rep A have to the Opportunity after the transfer?

- **A. No Access**
- B. Full Access
- C. Read/Write
- D. Read Only

Answer: A

Explanation:

Explanation

When a user transfers ownership of a record to another user, the original owner loses access to the record unless they have access through other means, such as role hierarchy, sharing rules, teams, etc. In this case, since both Sales Rep A and B have the same role in the role hierarchy, and the sharing model for the Opportunity object is private, Sales Rep A will have no access to the Opportunity after the transfer

NEW QUESTION # 32

.....

We try to offer the best Sharing-and-Visibility-Architect exam braindumps to our customers. First of all, in order to give users a better experience, we have been updating the system of Sharing-and-Visibility-Architect simulating exam to meet the needs of more users.
