It's universally acknowledged that in order to obtain a good job in the society, we must need to improve the ability of the job. If you want a job, some may have the requirements for the certificate, the a certificate for the CPMAI\_v7 exam is inevitable. Our product provide you the practice materials for the CPMAI\_v7 exam, the materials are revised by the experienced experts of the industry with high-quality. Besides the price of our product is also reasonable, no matter the students or the employees can afford it. Free update and pass guarantee and money back guarantee is available of our product. Choose us we will help you pass your next Certification CPMAI\_v7 Exam fast.

The Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam (CPMAI\_v7) certification is a valuable credential that every PMI professional should earn it. The Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam (CPMAI\_v7) certification exam offers a great opportunity for beginners and experienced professionals to demonstrate their expertise. With the Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam (CPMAI\_v7) certification exam everyone can upgrade their skills and knowledge. There are other several benefits that the PMI CPMAI\_v7 exam holders can achieve after the success of the Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam (CPMAI\_v7) certification exam.

## Certification Exam Sample Questions (Q84-Q89):

### NEW QUESTION # 84

You have been brought on to manage a recognition project, specifically an image recognition project, for an Autonomous Retail application. You know that you need to make sure you have sufficient data for this project. What's the best way to approach this?

- A. Take all the data your company has as well as purchase additional external data
- B. Take all the existing data you have and apply it to this project
- C. Take inventory of all data your company has and use the relevant data
- D. Take inventory of all data your team has and use the relevant data

**Answer: C**

Explanation:

In Phase II: Data Understanding, CPMAI's Data Selection tasks require teams to "Decide on the data to be used for analysis" by first listing all available sources and then selecting only those records and attributes that meet quality and relevance criteria . Taking a company-wide data inventory ensures you don't overlook relevant datasets before narrowing down to what truly applies.

### NEW QUESTION # 85

Your organization has just rolled out a new image recognition system and is asking all employees to use it. It was trained using images from the ImageNet test set. After a few weeks, users are finding the results are not as expected and are asking for visibility into all the aspects of what went into building an AI system. What area of Trustworthy AI is being addressed here?

- A. Explainable AI
- B. Transparent AI
- C. Governed AI
- D. Responsible AI
- E. AI Systemic Transparency

**Answer: B**

Explanation:

In CPMAI's Trustworthy AI framework, Transparent AI focuses on providing clear documentation of data sources, modeling approaches, evaluation methods, and deployment plans so that stakeholders can audit and understand how the system was built. The users' request for "visibility into all aspects" of model development, training data, and test sets directly maps to the Required AI Transparency Considerations task early in the methodology .

### NEW QUESTION # 86

You're working with petabytes of data and need to make this dataset more manageable. To do this, you want to reduce the number of variables under consideration. What is the name for this process?

- A. Multivariate regression
- B. Dimensionality Reduction
- C. Gradient Descent
- D. Data selection

**Answer: B**

Explanation:

The process of reducing a dataset's feature set while retaining its most informative components is formally known as dimensionality reduction. CPMAI describes techniques such as Principal Component Analysis (PCA) and t-distributed Stochastic Neighbor Embedding (t-SNE) under this category, enabling teams to simplify high-dimensional data for more efficient modeling.

### NEW QUESTION # 87

You have been tasked with creating a model that will recommend products based on what other customers have similarly purchased. Which algorithm is the best choice given this situation?

- A. K-Nearest Neighbor
- B. Hyperpersonalization
- C. Neural Network
- D. K-means

**Answer: A**

Explanation:

CPMAI's Generic Task Group: Select Modeling Technique in Phase IV: Model Development outlines common cognitive algorithms. For recommendation systems-which rely on finding similar user or item profiles-the K-Nearest Neighbor algorithm is the canonical choice, using customer purchase vectors to locate "nearest neighbors." In contrast, K-means is purely unsupervised clustering, Neural Networks are more complex and not necessary for basic collaborative filtering, and Hyperpersonalization is an AI pattern, not an algorithm.

### NEW QUESTION # 88

Your team is working on an NLP model and has just operationalized the first model. Your team makes updates to the model, overwrites the original model, and puts this new model into operation. However, one of the teams using the model has seen a decrease in performance and is asking to use the original model. What critical error did your team make?

- A. They did not practice model iteration and properly iterate on the model
- B. They did not have data governance in place
- C. They did not practice model versioning and keep all versions of the model
- D. They did not have a model retraining pipeline that took into account models

**Answer: C**

Explanation:

In Phase VI: Model Operationalization of the CPMAI v7 methodology, project teams must explicitly plan for "model versioning and iteration" as part of deploying and maintaining models in production. Overwriting the original model without preserving its prior version prevents rollback and comparison, which is a core requirement for robust AI operations.

The Workbook states that operationalization considerations include "model versioning and iteration" to ensure that previous model artifacts are retained and that updates can be managed safely.

Additionally, under Edge Model Data Needs, teams are instructed to "Determine methods for model versioning and update" to support proper tracking and governance of model changes across iterations.
