## Development-Lifecycle-and-Deployment-Architect New Dumps Questions, Development-Lifecycle-and-Deployment-Architect Sample Questions Answers

The second format of Salesforce Certified Development Lifecycle and Deployment Architect (Development-Lifecycle-and-Deployment-Architect) is the web-based practice exam that can be taken online through browsers like Firefox, Chrome, Safari, MS Edge, Internet Explorer, and Microsoft Edge. You don't need to install any excessive plugins or Software to attempt the web-based Practice Development-Lifecycle-and-Deployment-Architect Exam. All operating systems also support the web-based practice exam.

## Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q25-Q30):

**NEW QUESTION # 25**

Universal Containers (UC) is developing a new Customer Community. Requirements for the Community are not fully defined. UC is planning on using an Agile methodology for this work and has promised delivery of the complete system in three months. What are two risks associated with this approach? Choose 2 answers

- A. The functionality that can be delivered in 3 months is unknown, and may not meet the needs of the business
- B. Given the lack of requirements and the three-month timeline commitment, the project may not be feasible
- C. Agile does not allow for changes to requirements, so customers might not like the resulting solution
- D. Agile is not an appropriate development methodology for Customer Community implementations

**Answer: A,B**

**NEW QUESTION # 26**

Universal Containers (UC) is midway through a large enterprise project. UC is working in an agile model, and currently has four-week iterations, with a branching strategy supporting this approach. UC operates in a strict regulatory environment, and has dedicated teams for security, QA, and release management. The system is live with users, and a serious production issue is identified at the start of a sprint, which is narrowed down to a bug in some Apex code.
Which three approaches should an architect recommend to address this bug?
Choose 3 answers

- A. Investigate potential data impacts.
- B. Seek stakeholder approval for the hotfix.
- C. Attempt to fix the bug directly in production.
- D. Fix the bug in a hotfix branch.
- E. Wait until the next release to deploy the fix.

**Answer: A,B,D**

Explanation:
To address the bug in production, the architect should recommend the following approaches: Investigate potential data impacts, fix the bug in a hotfix branch, and seek stakeholder approval for the hotfix.
Investigating the data impacts can help assess the severity and scope of the bug, and determine the best course of action to mitigate any data loss or corruption. Fixing the bug in a hotfix branch can help isolate the change and avoid introducing any other changes from the current sprint. Seeking stakeholder approval for the hotfix can help ensure compliance with the regulatory requirements and governance policies.

**NEW QUESTION # 27**

Universal Containers is in the final stages of building a new application to track custom containers. During a review of the application, a business subject Matter Expert mentioned that it would be nice to be able to track additional container types beyond what was originally scoped during the plan and design phase. Which two actions should be performed to mitigate the risk? Choose 2 answers.

- A. Escalate and communicate to stakeholders the risk and mitigate it by extending the timeline of the project to support the new requirement based on stakeholders input.
- B. Have a discussion with the business subject Matter Expert and communicate that anew developer environment will be needed to mitigate the risk.
- C. Have a discussion with the business subject Matter Expert and communicate that the Salesforce has limitations in supporting such a feature to mitigate the risk.
- D. Escalate and communicate to stakeholders the risk and mitigate it by allocating additional resources to support the new requirement based on stakeholders input.

**Answer: A,D**

**NEW QUESTION # 28**

All AppExchange products are subject to Salesforce security reviews.
What is the most common reason that the prospect AppExchange products fail the security review?

- A. Cross-site scripting
- B. SOQL injection

- C. Session hacking
- D. CRUD/FLS (field level security)

**Answer: A**

Explanation:
Explanation
Cross-site scripting is the most common reason that the prospect AppExchange products fail the security review. Cross-site scripting (XSS) is a type of web application vulnerability that allows an attacker to inject malicious code into a web page that is viewed by other users. XSS can compromise the security and privacy of the users, as well as the functionality and performance of the application. Salesforce has strict security standards and policies for AppExchange products, and any product that has XSS vulnerabilities will not pass the security review. CRUD/FLS, session hacking, and SOQL injection are also security issues that can affect AppExchange products, but they are not as common or severe as XSS.

**NEW QUESTION # 29**
Cloud Kicks (CK) is launching a new sneaker line during the upcoming holiday season and needs to do a thorough batch data testing before Go-Live. CK is using Salesforce unlimited edition.
What two sandbox types should the architect recommend for batch data testing?
Choose 2 answers

- A. Developer Pro sandbox
- B. Partial Copy sandbox
- C. Full sandbox
- D. Developer sandbox

**Answer: B,C**

**NEW QUESTION # 30**
......
