# How Can You Crack the Fortinet FCP_ZCS_AD-7.4 Exam with Flying Colors?

P.S. Free & New FCP_ZCS_AD-7.4 dumps are available on Google Drive shared by CramPDF: https://drive.google.com/open?id=1A_FMa5xRtuqa5BDgCY3HyVsT16UlIZX5

CramPDF FCP - Azure Cloud Security 7.4 Administrator (FCP_ZCS_AD-7.4) practice test material covers all the key topics and areas of knowledge necessary to master the Fortinet Certification Exam. Experienced industry professionals design the FCP_ZCS_AD-7.4 exam questions and are regularly updated to reflect the latest changes in the FCP - Azure Cloud Security 7.4 Administrator (FCP_ZCS_AD-7.4) exam. In addition, CramPDF offers three different formats of practice material which are discussed below.

Fortinet FCP_ZCS_AD-7.4 Exam Syllabus Topics:

Topic	Details
Topic 1	• VPN Solutions in Azure: This section of the exam measures skills of a Network Security Engineer and addresses secure connectivity between Azure and on-premises environments. Candidates will review the different site-to-site VPN options available in Azure, configure tunnels between FortiGate devices and Azure VPN gateways, and understand how Azure Virtual WAN enhances global connectivity.
Topic 2	• Azure Public Cloud Concepts: This section of the exam measures skills of a Cloud Engineer and covers foundational knowledge of public cloud computing, with a focus on Azure. Candidates are expected to understand core cloud concepts and how Azure implements them through services such as compute, storage, and networking. It also includes basic elements of Azure networking and built-in security services that support cloud-native operations.
Topic 3	• Azure Virtual WAN: This section of the exam measures skills of a Cloud Engineer and explains the concept and deployment of Azure Virtual WAN. It focuses on building large-scale, optimized, and automated branch connectivity with Azure regions and services using virtual WAN hubs, improving cloud-based networking efficiency and scalability.
Topic 4	• Azure Route Server Concepts: This section of the exam measures skills of a Cloud Engineer and covers the basics of Azure Route Server. The focus is on understanding what the Azure Route Server is, how it functions within a virtual network, and how it simplifies the management of dynamic routing by automating route exchange with network virtual appliances.
Topic 5	• High Availability (HA): This section of the exam measures skills of a Network Security Engineer and focuses on maintaining system resilience within Azure. Candidates are required to demonstrate knowledge of setting up FortiGate-based high availability in Azure, configuring Azure-native load balancing, and implementing autoscaling features to ensure continuous service availability and optimal performance.

FCP_ZCS_AD-7.4 Latest Materials, Real FCP_ZCS_AD-7.4 Exam Dumps

Do you want to double your salary in a short time? Yes, it is not a dream. Our FCP_ZCS_AD-7.4 latest study guide can help you. IT field is becoming competitive; a Fortinet certification can help you do that. If you get a certification with our FCP_ZCS_AD-7.4 latest study guide, maybe your career will change. A useful certification will bring you much outstanding advantage when you apply for any jobs about Fortinet company or products. Just only dozens of money on FCP_ZCS_AD-7.4 Latest Study Guide will assist you 100% pass exam and 24-hours worm aid service.

Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q12-Q17):

NEW QUESTION # 12
A Linux server was deployed in a protected subnet with a dynamic IP address. A FortiGate VM in the internal subnet provides traffic filtering to it. and you must implement a firewall policy using the IP address of the Linux server.
Which feature could help integrate FortiGate using Linux server tags?

- A. Software-defined network (SDN) connector
- B. Microsoft Entra ID
- C. Service Fabric Cluster
- D. Targets Management

Answer: A

Explanation:
The Software-defined network (SDN) connector allows FortiGate to dynamically pull metadata such as tags, IP addresses, and resource groups from Azure resources. This enables automatic policy updates based on dynamic IP changes, such as those of a Linux server in a protected subnet.

NEW QUESTION # 13
Refer to the exhibit.

An Azure Route Server and an active-passive FortiGate with Elastic Load Balancing (ELB) and Internal Load Balancing (ILB) have been deployed successfully and they are sharing and populating BGP routes in the Protected VNet.
A Linux server has been deployed in a new VNet spoke. It is expected that Azure Route Server should inject the FortiGate BGP routes into the Linux server but that failed.
How can you diagnose the problem?

- A. Review FortiGate BGP neighbors
- B. Verify the BGP setup on Azure Route Server

- C. Monitor effective routes on the Azure network interface (NIC) of the Linux server
- D. Linux server doesn't support BGP negotiation with Azure Route Server

Answer: C

Explanation:
The Linux server in the spoke VNet cannot directly peer BGP with the Azure Route Server, as it is not a BGP-enabled device. Instead, Azure propagates routes to VMs through the effective route tables associated with their network interfaces (NICs). Therefore, to diagnose why BGP routes are not reaching the Linux VM, you should monitor the effective routes on the NIC to verify if the routes from the FortiGate (via the Route Server) are being injected properly.

NEW QUESTION # 14
What is a key distinction between Azure Firewall and FortiGate VM in terms of their primary functions?

- A. Azure Firewall focuses on network traffic inspection, while FortiGate VM is primarily a web application firewall.
- B. Azure Firewall is a cloud-native network security service, while FortiGate VM is a network virtual appliance (NVA) that provides comprehensive security functions.
- C. Azure Firewall is designed exclusively for application layer filtering, while FortiGate VM is suitable for both on-premises and cloud environments.
- D. Azure Firewall and FortiGate VM have identical primary functions, and no features differentiation.

Answer: B

Explanation:
Azure Firewall is a cloud-native, fully managed network security service designed to control and log network traffic using Azure policies. In contrast, the FortiGate VM is a network virtual appliance (NVA) that delivers comprehensive security features, including firewalling, IPS, antivirus, VPN, and application control, suitable for both on-premises and cloud deployments.

NEW QUESTION # 15
What Fortinet solution can be utilized in Azure to secure web applications?
Response:

- A. FortiWeb
- B. FortiAnalyzer
- C. FortiManager
- D. FortiSandbox

Answer: A

NEW QUESTION # 16
What impact does autoscaling have on load balancing within an Azure environment?
Response:

- A. It limits the number of usable IP addresses
- B. It enhances load balancing effectiveness by dynamically adjusting resource allocation
- C. It decreases the total cost of ownership
- D. It increases the complexity of network configuration

Answer: B

NEW QUESTION # 17
......

This time set your mind at rest with the help of our FCP_ZCS_AD-7.4 guide quiz. You are free from any loss but focus on your success of the exam firmly this time. If you choose our nearly perfect FCP_ZCS_AD-7.4practice materials with high quality and accuracy, our FCP_ZCS_AD-7.4 Training Questions can enhance the prospects of victory. Choosing our FCP_ZCS_AD-7.4

learning prep is the most useful way to improve your grade and chance to pass the exam.
