The Certified Information Privacy Technologist (CIPT) exam is a certification program offered by the International Association of Privacy Professionals (IAPP). CIPT exam is designed to test the knowledge and skills of professionals who are involved in the development and implementation of data protection strategies in the workplace. CIPT certification is recognized globally as a standard for privacy professionals.

To prepare for the CIPT certification exam, individuals can attend training courses, webinars, and workshops offered by the IAPP. The IAPP also provides study materials, such as books, practice exams, and online resources, to help individuals prepare for the exam. CIPT Exam consists of 90 multiple-choice questions, and individuals have two hours to complete the exam. The passing score

for the exam is 300 out of 500.

The CIPT certification exam is intended for individuals who are responsible for implementing, managing, and maintaining privacy technologies in their organizations. CIPT exam is suitable for professionals working in various industries such as healthcare, finance, and technology, among others. CIPT exam is also ideal for individuals who want to advance their careers in the field of privacy technology and demonstrate their expertise to potential employers.

Now you don't need to go through the hassle of studying lengthy manuals for CIPT Exam Questions preparation. What you actually required is packed into easy to grasp content. Fix your attention on these CIPT questions and answers and your success is guaranteed.

IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q192-Q197):

NEW QUESTION # 192

SCENARIO

Please use the following to answer the next question:

Chuck, a compliance auditor for a consulting firm focusing on healthcare clients, was required to travel to the client's office to perform an onsite review of the client's operations. He rented a car from Finley Motors upon arrival at the airport as so he could commute to and from the client's office. The car rental agreement was electronically signed by Chuck and included his name, address, driver's license, make/model of the car, billing rate, and additional details describing the rental transaction. On the second night, Chuck was caught by a red light camera not stopping at an intersection on his way to dinner. Chuck returned the car back to the car rental agency at the end week without mentioning the infraction and Finley Motors emailed a copy of the final receipt to the address on file.

Local law enforcement later reviewed the red light camera footage. As Finley Motors is the registered owner of the car, a notice was sent to them indicating the infraction and fine incurred. This notice included the license plate number, occurrence date and time, a photograph of the driver, and a web portal link to a video clip of the violation for further review. Finley Motors, however, was not responsible for the violation as they were not driving the car at the time and transferred the incident to AMP Payment Resources for further review. AMP Payment Resources identified Chuck as the driver based on the rental agreement he signed when picking up the car and then contacted Chuck directly through a written letter regarding the infraction to collect the fine.

After reviewing the incident through the AMP Payment Resources' web portal, Chuck paid the fine using his personal credit card. Two weeks later, Finley Motors sent Chuck an email promotion offering 10% off a future rental.

What should Finley Motors have done to incorporate the transparency principle of Privacy by Design (PbD)?

- A. Obtained verbal consent from Chuck and recorded it within internal systems.
- B. Signed a data sharing agreement with AMP Payment Resources.
- **C. Provided notice of data sharing practices within the electronically signed rental agreement.**
- D. Documented that Finley Motors has a legitimate interest to share Chuck's information.

Answer: C

Explanation:

Privacy by Design (PbD) principles emphasize transparency, meaning that organizations should inform individuals about their data processing practices. In this scenario, Finley Motors should have provided notice within the rental agreement about their data sharing practices with third parties like AMP Payment Resources.

This transparency would ensure that Chuck was aware that his personal information could be shared for purposes such as managing infractions. According to the IAPP, incorporating such notices in agreements is a best practice for maintaining transparency and upholding data protection principles.

"Privacy by Design: The 7 Foundational Principles," Information and Privacy Commissioner of Ontario, Canada.

NEW QUESTION # 193

What is an example of a just-in-time notice?

- A. Privacy information given to a user when he attempts to comment on an online article.
- B. A warning that a website may be unsafe.
- C. A credit card company calling a user to verify a purchase before it is authorized
- D. A full organizational privacy notice publicly available on a website

Answer: A

Explanation:

A just-in-time notice (JIT notice) refers to the practice of providing users with relevant privacy information at the point when they are about to engage in a specific activity that involves data collection. This approach ensures that users are informed about how their data will be used right when it is most relevant to them. For example, presenting a privacy notice when a user attempts to comment on an online article fits this description. This JIT notice informs the user about how their comment data will be processed and stored, ensuring they are aware of the privacy implications at the moment they need to be.

NEW QUESTION # 194

When designing a new system, which of the following is a privacy threat that the privacy technologist should consider?

- A. Encryption.
- B. Social engineering.
- C. Identity and Access Management.
- D. Social distancing.

Answer: B

Explanation:

Social engineering is a privacy threat that the privacy technologist should consider when designing a new system.

NEW QUESTION # 195

SCENARIO

Clean-Q is a company that offers house-hold and office cleaning services. The company receives requests from consumers via their website and telephone, to book cleaning services. Based on the type and size of service, Clean-Q then contracts individuals that are registered on its resource database - currently managed in-house by Clean-Q IT Support. Because of Clean-Q's business model, resources are contracted as needed instead of permanently employed.

The table below indicates some of the personal information Clean-Q requires as part of its business operations:

Category	Types of Personal Information
Customers	Name, address (location), contact information, billing information
Resources (contracted)	Name, contact information, banking details, address

Clean-Q has an internal employee base of about 30 people. A recent privacy compliance exercise has been conducted to align employee data management and human resource functions with applicable data protection regulation. Therefore, the Clean-Q permanent employee base is not included as part of this scenario.

With an increase in construction work and housing developments, Clean-Q has had an influx of requests for cleaning services. The demand has overwhelmed Clean-Q's traditional supply and demand system that has caused some overlapping bookings.

In a business strategy session held by senior management recently, Clean-Q invited vendors to present potential solutions to their current operational issues. These vendors included Application developers and Cloud-Q's solution providers, presenting their proposed solutions and platforms.

The Managing Director opted to initiate the process to integrate Clean-Q's operations with a cloud solution (LeadOps) that will provide the following solution one single online platform: A web interface that Clean-Q accesses for the purposes of resource and customer management. This would entail uploading resource and customer information.

A customer facing web interface that enables customers to register, manage and submit cleaning service requests online.

A resource facing web interface that enables resources to apply and manage their assigned jobs.

An online payment facility for customers to pay for services.

Which question would you most likely ask to gain more insight about LeadOps and provide practical privacy recommendations?

- A. Where are LeadOps' operations and hosting services located?
- B. Does LeadOps practice agile development and maintenance of their system?
- C. How big is LeadOps' employee base?
- D. What is LeadOps' annual turnover?

Answer: A

Explanation:

The location of LeadOps' operations and hosting services is important information for Clean-Q to consider when assessing LeadOps' appropriateness as a service provider. This is because different countries have different data protection laws and regulations that may impact how personal information can be processed and stored. Knowing where LeadOps' operations and hosting services are located will help Clean-Q make informed decisions about how to protect the personal information it entrusts to LeadOps.

NEW QUESTION # 196

What can be used to determine the type of data in storage without exposing its contents?

- A. Server logs.
- B. Data mapping.
- C. Metadata.
- D. Collection records.

Answer: C

Explanation:

Metadata can be used to determine the type of data in storage without exposing its contents. Metadata is data about data, providing information such as file type, creation date, author, and other attributes that describe the data without revealing the actual content. This allows organizations to categorize and manage data effectively without compromising data privacy.

NEW QUESTION # 197

.....

It means you can use the Certified Information Privacy Technologist (CIPT) (CIPT) PDF version of Pass4sures anywhere at any time on the smart device you have.
