

Pass Guaranteed 2026 Avaya 71301T: Avaya Aura Communication Applications Implement Perfect Minimum Pass Score

BTW, DOWNLOAD part of DumpsMaterials 71301T dumps from Cloud Storage: https://drive.google.com/open?id=1s4i0aH_L1p_7AcWU3j6A2Bpnflramoiz

The 71301T certification lead you to numerous opportunities in career development and shaping your future. Just imagine that with the 71301T certification, you can get a higher salary and a better position to help you lead a totally different and successful life. And with our 71301T Exam Braindumps, it is easy to pass the exam and get the 71301T certification. According to our data, our pass rate is high as 98% to 100%. You can pass the exam just by your first attempt.

The 71301T practice test software provides you the assistance to self-assess your progress. It helps you analyze the gradual improvement and notice the shortcomings while preparing Avaya 71301T through this format. The ability to customize your Avaya 71301T Practice Test time and the types of Avaya 71301T questions will turn your preparation into an easy affair.

Avaya 71301T Minimum Pass Score: Avaya Aura Communication Applications Implement - DumpsMaterials Brings the best Test Voucher with One Year Free Updates

Learning with our 71301T learning guide is quiet a simple thing, but some problems might emerge during your process of 71301T exam materials or buying. Considering that our customers are from different countries, there is a time difference between us, but we still provide the most thoughtful online after-sale service twenty four hours a day, seven days a week, so just feel free to contact with us through email anywhere at any time. For customers who are bearing pressure of work or suffering from career crisis, Avaya Aura Communication Applications Implement learn tool of inferior quality will be detrimental to their life, render stagnancy or even cause loss of salary. So choosing appropriate 71301T Test Guide is important for you to pass the exam. One thing we are sure, that is our 71301T certification material is reliable.

Avaya Aura Communication Applications Implement Sample Questions (Q35-Q40):

NEW QUESTION # 35

A field engineer deploys Avaya Aura Web Gateway (AAWG) in a Virtualized Environment (VE). After the successful deployment of the virtual machine, what is the next step?

- A. Run the AAWG installation utility by entering the app install command on the AAWG CLI.
- **B. Enroll AAWG with System Manager (SMGR) by running the initTM command on the AAWG CLI.**
- C. Assume there is nothing to do because AAWG is ready to go with the details provided during the deployment.
- D. Add AAWG as a Managed Element on System Manager (SMGR) and configure Pairing with Session Manager (SM).

Answer: B

Explanation:

After deploying the Avaya Aura Web Gateway (AAWG) as a virtual machine (OVA/OVF) in your virtualized environment, the machine is installed but not yet trusted by or integrated into the Avaya Aura ecosystem.

Trust Management: Running the initTM (Initialize Trust Management) command on the command-line interface (CLI) of the AAWG is the mandatory post-deployment step.

Security Integration: This command initiates a secure handshake with the Avaya Aura System Manager (SMGR), allowing the AAWG to obtain the necessary security certificates and become a managed entity within the network's Public Key Infrastructure (PKI).

Registration: Once the trust is established via initTM, you can then proceed to register the gateway within SMGR and integrate it with your Session Manager (SM) clusters.

NEW QUESTION # 36

To provide the customized music, prompts, and/or error announcements when using the Avaya Call Park and Page, which Avaya application server is used?

- A. Avaya Aura Communication Manager (CM)
- B. Avaya Breeze
- C. Avaya Security Module
- **D. Avaya Aura Media Server (MS)**

Answer: D

Explanation:

In the modern Avaya Aura architecture, particularly when utilizing the Call Park and Page feature, the Avaya Aura Media Server (AAMS) serves as the engine for all specialized audio processing.

Customization: While Communication Manager (CM) handles the call logic (the "where" and "when"), it offloads the actual audio delivery to the Media Server. The AAMS is where you upload and manage the high-fidelity audio files used for customized music, specific page prompts, and error announcements.

Scalability: Using a software-based Media Server allows for more simultaneous announcements and better audio quality compared to older hardware-based announcement boards (like the G450's VAL resources).

Integration: The Media Server is designed to store and play back these files via the SIP or H.248 protocol, allowing the system to provide a tailored user experience during the Park and Page workflow.

NEW QUESTION # 37

The Avaya WebRTC solution uses the web intensively to make media calls from a standard web browser in the internet, into internal and secure communication premises in the enterprise.

Which statement about security between the Enterprise-edge and those standard Web browsers in the internet is true?

- **A. No trust relationship exists between enterprise edge security and web browsers; therefore, the security strategy is based on an Authorization Token instead.**
- B. There must be a VPN connection between the Web Browser and the Enterprise-edge to build a WebRTC link.
- C. A trust relationship based on certificates must be built to make WebRTC work.
- D. WebRTC only works within the Enterprise network. External Web Browsers must connect through an Avaya Session Border Controller for Enterprise (SBCE) via a SIP trunk.

Answer: A

Explanation:

Validation of the authorization token.

The WebRTC Snap-in will validate the authorization token created and encrypted by the web server. If the snap-in can decrypt the token and ensure that the time stamp is valid, it knows that the incoming HTTP request is valid. The time stamp will usually be short lived; on the order of 5-

10seconds to protect against reply attacks.

NEW QUESTION # 38

In Avaya Session Border Controller for Enterprise (SBCE) 7.x, you need to download the 46xxsettings.txt file to a Remote Worker device.
What needs to be configured under DMZ Services > Relay Services?

- A. Application Relay and Reverse Proxy
- B. Reverse Proxy
- C. Application Relay and File Transfer
- D. Application Relay

Answer: D

Explanation:

Relay Services are used to define how file transfers (e.g., for phone firmware upgrades and configuration), are routed to the Remote Worker endpoints.

Example: For accessing the file server using HTTPS protocol. The following screenshot shows the newly created Relay Services

NEW QUESTION # 39

Which two statements about the Avaya Session Border Controller for Enterprise (ASBCE) certificate management are true? (Choose two.)

- A. It supports both the Root and Intermediate Certificate Authority (CA) certificates.
- B. It provides an in-built Certificate Signing Request (CSR) generation utility.
- C. It allows using a default server certificate for up to one year after the installation.
- D. It only supports .crt certificate file types.
- E. It requires a single server identity certificate for each deployed server.

Answer: A,B

Explanation:

Managing certificates in the ASBCE environment is a critical task for establishing secure TLS connections with endpoints, providers, and other Aura elements.

Support for CA Chains (A): The ASBCE allows you to import and manage a full chain of trust.

This includes the ability to import the Root CA certificate and any necessary Intermediate CA certificates, which is standard practice for modern PKI implementations to ensure complete validation of the server identity.

CSR Utility (D): The ASBCE web interface includes a built-in utility under Settings > Certificates > Certificate Management that generates the necessary public/private key pairs and formats the Certificate Signing Request (CSR). This is the standard mechanism for requesting identity certificates from your corporate or third-party CA.
