

100% Pass SailPoint - Latest IdentityIQ-Associate Test Fee

P.S. Free 2026 SailPoint IdentityIQ-Associate dumps are available on Google Drive shared by BraindumpsPrep:
https://drive.google.com/open?id=1ogNOCMsesYzaj_B3wpdHTaHUG6BIES_L

BraindumpsPrep is one of the most reliable platforms to get actual SailPoint IdentityIQ-Associate dumps. It offers the latest and valid real SailPoint Certified IdentityIQ Associate Exam (IdentityIQ-Associate) exam dumps. The product of BraindumpsPrep is available in SailPoint IdentityIQ-Associate PDF, EXAM CODE desktop practice exam software, and web-based SailPoint Certified IdentityIQ Associate Exam (IdentityIQ-Associate) practice test.

Choosing our IdentityIQ-Associate learning guide is not only an enrichment of learning content, but also an opportunity to improve our own discovery space. Our IdentityIQ-Associate study guide materials could bring huge impact to your personal development, because in the process of we are looking for a job, hold a IdentityIQ-Associate certificate you have more advantage than your competitors, the company will be a greater probability of you. After using our IdentityIQ-Associate Study Guide materials, users can devote more time and energy to focus on their major and makes themselves more and more prominent in the professional field.

IdentityIQ-Associate Examcollection Vce | IdentityIQ-Associate New Questions

The passing rate of our IdentityIQ-Associate study materials is the issue the client mostly care about and we can promise to the client that the passing rate of our product is 99% and the hit rate is also high. Our IdentityIQ-Associate study materials are selected strictly based on the real IdentityIQ-Associate exam and refer to the exam papers in the past years. Our expert team devotes a lot of efforts on them and guarantees that each answer and question is useful and valuable. We also update frequently to guarantee that the client can get more IdentityIQ-Associate learning resources and follow the trend of the times. So if you use our study materials you will pass the test with high success probability.

SailPoint IdentityIQ-Associate Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Applications: Focuses on how applications and connectors are configured in IdentityIQ, including schemas, correlation, aggregation tasks, and resolving uncorrelated accounts.
Topic 2	<ul style="list-style-type: none">• Identity Modeling: Explains how identity data is structured and managed through IdentityCubes, identity attributes, groups, populations, and manager correlation.
Topic 3	<ul style="list-style-type: none">• User-Driven Requests: Explains how users submit access requests, what request types are available, and how QuickLink Populations control who can request what for whom.

SailPoint Certified IdentityIQ Associate Exam Sample Questions (Q74-Q79):

NEW QUESTION # 74

Is this a valid reason to grant an identity an IdentityIQ capability?
To give them access to different types of Advanced Analytics searches

- A. Yes
- B. No

Answer: A

Explanation:

Yes. Granting an IdentityIQ capability is a valid way to provide access to additional functions within SailPoint IdentityIQ, including areas such as Advanced Analytics. Capabilities are part of IdentityIQ's internal authorization model. They determine what a logged-in user is allowed to see and perform inside the IdentityIQ interface, such as administration, reporting, certification administration, role management, policy management, or advanced search and analysis functions.

Advanced Analytics searches are IdentityIQ functions, not external application permissions. Therefore, access to those search types is governed by IdentityIQ security controls, including capabilities, rights, and in some deployments, scoping. This is different from granting access on a connected application, which would be handled through accounts, entitlements, roles, access requests, and provisioning.

The key distinction is that capabilities grant authority inside IdentityIQ itself. They do not directly modify a user's access on a target system. Providing access to different types of Advanced Analytics searches is therefore an appropriate reason to assign an IdentityIQ capability.

Reference topics: Identity Modeling - how IdentityIQ access is granted to users; Foundational Concepts - common IdentityIQ objects and components; Governance - analytics and access visibility.

NEW QUESTION # 75

The purpose of marking an attribute as managed when defining the application account schema is to designate it as:
An attribute that can be edited in IdentityIQ.

- A. No
- B. Yes

Answer: A

Explanation:

Marking an account schema attribute as managed does not mean the attribute can be edited in IdentityIQ. In IdentityIQ application schema configuration, a managed attribute is one whose values are promoted into IdentityIQ as governable access objects, commonly represented in the entitlement catalog. This allows IdentityIQ to attach governance metadata to the discovered values, such as display name, description, owner, requestability, classification, and review-related context.

Editability is controlled through different mechanisms, including provisioning policies, forms, workflows, connector capabilities, and provisioning plan operations. An attribute may be managed for governance purposes without being directly editable by a user in IdentityIQ. Conversely, an attribute may be populated during provisioning if the application connector and provisioning policy support it, but that is separate from the schema's managed designation.

The managed setting is therefore about governance, cataloging, and access modeling, not direct modification. It enables IdentityIQ to treat values of that schema attribute as objects that can be reviewed, requested, certified, described, and owned.

Reference topics: Applications - account schema attributes and their functions; Access Modeling - entitlement catalog; Governance - certifications; Provisioning - provisioning policies and attribute handling.

NEW QUESTION # 76

Is this statement true for the use of applications?
They are defined in IdentityIQ to represent the systems from which identities are read.

- A. No
- B. Yes

Answer: A

Explanation:

The statement is not technically accurate. In SailPoint IdentityIQ, applications are defined to represent external systems, platforms, directories, databases, or resources from which account, group, entitlement, and attribute data are aggregated, and in some cases to which provisioning changes are written. IdentityIQ does not generally "read identities" directly from applications. Instead, it reads account records and associated attributes from applications, then uses identity correlation, authoritative-source logic, and identity refresh processing to construct or update IdentityCubes.

This distinction is fundamental. An application may be an authoritative source, such as an HR system, where account attributes contribute heavily to identity creation and lifecycle state. However, the object read from the source is still an account or source record, not an IdentityIQ identity object. The identity is modeled inside IdentityIQ after aggregation and correlation occur.

Therefore, the more precise statement is that applications represent systems from which IdentityIQ reads account and access data, not systems from which IdentityIQ simply reads identities. Reference topics:

Applications, application definition, account aggregation, authoritative applications, correlation, IdentityCube creation, and Identity Modeling.

NEW QUESTION # 77

Does this statement accurately describe how roles are acquired by users in the default role model configuration?

Business roles can only be requested by managers.

- A. No
- B. Yes

Answer: A

Explanation:

No. This statement does not accurately describe role acquisition in IdentityIQ. Business roles are not restricted to being requested only by managers. In IdentityIQ, roles may be acquired through role assignment logic, role detection, access requests, or administrative action, depending on the role configuration and the organization's request model.

A business role commonly represents access associated with a business function, job, department, location, or organizational responsibility. Users may receive business roles automatically when their identity attributes satisfy configured role profiles or assignment rules, typically recalculated during Identity Refresh. Separately, roles may be made requestable through Lifecycle Manager and exposed through QuickLinks, where request eligibility is controlled by QuickLink Populations, request configuration, and workflow rules.

Managers may be allowed to request roles for direct reports, but that is only one possible configuration. IdentityIQ can also allow users to request roles for themselves, allow delegated requesters to request for others, or restrict requests to specific populations. Therefore, "only requested by managers" is too narrow and incorrect. Reference topics: Access Modeling, business roles, role assignment, role detection, Identity Refresh, User-Driven Requests, QuickLink Populations, and role request configuration.

NEW QUESTION # 78

Is this statement true for the use of tasks?

They are used to automate the processes to build, update, and maintain the information contained within IdentityIQ.

- A. Yes
- B. No

Answer: A

Explanation:

Yes. In SailPoint IdentityIQ, tasks are used to automate repeatable system processes that build, update, and maintain IdentityIQ data. Tasks are executable operations that can be run manually or scheduled to run at defined intervals. They are commonly used for core operational activities such as account aggregation, group aggregation, identity refresh, role processing, certification generation support, report execution, data maintenance, and other background processing.

This statement accurately describes the purpose of tasks because much of IdentityIQ's governance model depends on current and processed data. For example, aggregation tasks bring account and entitlement data from applications into IdentityIQ. Identity Refresh tasks update IdentityCubes, calculate role assignments, process lifecycle events, evaluate policies, and refresh identity attributes. Maintenance tasks help keep stored information consistent and usable.

Tasks differ from workflows because tasks are primarily system-executed jobs, while workflows coordinate business processes, approvals, provisioning logic, and human interaction. Therefore, tasks are correctly described as mechanisms that automate the operational processes used to build, update, and maintain information inside IdentityIQ.

Reference topics: Foundational Concepts, tasks versus workflows, aggregation tasks, identity refresh, IdentityCube maintenance, application data processing, and system automation.

NEW QUESTION # 79

.....

Passing SailPoint certification IdentityIQ-Associate exam is not simple. Choose the right training is the first step to your success and choose a good resource of information is your guarantee of success. While the product of BraindumpsPrep is a good guarantee of the resource of information. If you choose the BraindumpsPrep product, it not only can 100% guarantee you to pass SailPoint Certification IdentityIQ-Associate Exam but also provide you with a year-long free update.
