### CrowdStrike Certified SIEM Engineer Sample Questions (Q50-Q55):

#### NEW QUESTION # 50

What is the recommended order of the three required activities to build an efficient CQL query?

- A. Filter > Aggregate > Format
- B. Filter > Format > Aggregate
- C. Format > Filter > Aggregate
- D. Aggregate > Filter > Format

**Answer: A**

Explanation:

The correct answer is B. CrowdStrike's query best-practices documentation says to filter first, then do transformations/formatting, then aggregate, and finally do any output-style post-processing such as table/sorting. Among the choices given, Filter > Aggregate > Format is the best match because formatting/output belongs at the end for efficiency.

This is also consistent with CrowdStrike's explanation that CQL pipelines chain filter and transformation steps before aggregate functions, and that aggregate functions produce new result structures rather than raw events.

#### NEW QUESTION # 51

Which command helps visualize in real time whether sources and sinks are working properly in the Log Collector?

- A. logscale-collector monitor
- B. logscale-collector check
- C. logscale-collector --status
- D. journalctl -u logscale-collector

**Answer: A**

Explanation:

The correct answer is B.

CrowdStrike's Falcon LogScale Collector debug documentation says the monitor command launches a monitor terminal application and can be used to see a live view of the running state of the collector. It explicitly states that the running sources, queues and sinks can be inspected in real time. That exactly matches the question.

Why the other options are incorrect:

A can help review service logs, but it is not the documented real-time visualization command for sources and sinks. C and D do not match the documented command for this purpose in the collector troubleshooting documentation.

#### NEW QUESTION # 52

You want a Next-Gen SIEM dashboard to update automatically when new data is available. Which action would you take?

- A. Change the "Fixed Time Range" to the current date
- B. Change the "Relative Time Range" interval to 1 millisecond ago
- C. Toggle the "Live" button to on
- D. Change the "Start Time" interval to 1 hour

**Answer: C**

#### NEW QUESTION # 53

Which Falcon LogScale Collector mode keeps the log source configuration stored locally on the collector host instead of centrally in Fleet Management?

- **A. localConfig**
- B. collectorOnly
- C. central
- D. full

**Answer: A**

Explanation:

In Fleet Management enrollment, localConfig keeps the collector's source configuration stored and managed locally on the host. By contrast, full mode stores and manages the configuration centrally in Next-Gen SIEM / Fleet Management. This distinction is important when choosing between centralized and host-local administration.

#### NEW QUESTION # 54

A parser needs to preserve the original third-party field name and also map it to an ECS-compatible field. What is the best approach?

- A. Rename the original field to the ECS field
- **B. Keep the original Vendor field and assign its value to a new ECS field**
- C. Store both values only in @rawstring
- D. Delete the original field after mapping

**Answer: B**

Explanation:

A CPS-compliant approach keeps the original Vendor field while also assigning the value to a normalized ECS field. This preserves source fidelity and enables standardized search and detections. Renaming away the original field loses source context, and storing only in @rawstring prevents structured analysis.
