For candidates who buy Associate-Cloud-Engineer test materials online, they may care more about the privacy protection. We can ensure you that your personal information such as your name and email address will be protected well if you choose us. Once the order finishes, your personal information will be concealed. Furthermore, Associate-Cloud-Engineer exam braindumps are high-quality, and we can help you pass the exam just one time. We promise that if you fail to pass the exam, we will give you full refund. If you have any questions for Associate-Cloud-Engineer Exam Test materials, you can contact with us online or by email, we will give you reply as quickly as we can.

The Google Associate Cloud Engineer Exam certification exam validates the candidate's ability to design, develop, deploy, and operate applications and infrastructure on the Google Cloud Platform. It also demonstrates the candidate's understanding of Google Cloud technologies, including Google Compute Engine, Google Kubernetes Engine, Google Cloud Storage, Google Cloud SQL, and Google Cloud Identity and Access Management. By earning this certification, candidates can showcase their expertise in Google Cloud technologies and gain recognition in the industry as a skilled Google Cloud professional.

High-quality Reliable Associate-Cloud-Engineer Test Sims | Easy To Study and Pass Exam at first attempt & Reliable Associate-Cloud-Engineer: Google Associate Cloud Engineer Exam

Our three versions of Associate-Cloud-Engineer exam braindumps are the PDF, Software and APP online and they are all in good quality. All popular official tests have been included in our Associate-Cloud-Engineer study materials. So you can have wide choices. In fact, all of the three versions of the Associate-Cloud-Engineer practice prep are outstanding. You will enjoy different learning interests under the guidance of the three versions of Associate-Cloud-Engineer training guide.

Google Associate Cloud Engineer Exam Sample Questions (Q133-Q138):

NEW QUESTION # 133

You are using multiple configurations for gcloud. You want to review the configured Kubernetes Engine cluster of an inactive configuration using the fewest possible steps. What should you do?

- A. Use `gcloud config configurations activate` and `gcloud config list` to review the output.
- B. Use `kubectl config get-contexts` to review the output.
- C. Use `kubectl config use-context` and `kubectl config view` to review the output.
- D. Use `gcloud config configurations describe` to review the output.

Answer: C

NEW QUESTION # 134

You want to deploy a new containerized application into Google Cloud by using a Kubernetes manifest. You want to have full control over the Kubernetes deployment, and at the same time, you want to minimize configuring infrastructure. What should you do?

- A. Deploy the application on GKE Autopilot.
- B. Deploy the application on GKE Standard.
- C. Deploy the application on Cloud Functions.
- D. Deploy the application on Cloud Run.

Answer: A

NEW QUESTION # 135

You are working with a Cloud SQL MySQL database at your company. You need to retain a month-end copy of the database for three years for audit purposes. What should you do?

- A. Convert the automatic first-of-the-month backup to an export file Write the export file to a Coldline class Cloud Storage bucket
- B. Save file automatic first-of-the- month backup for three years Store the backup file in an Archive class Cloud Storage bucket
- C. Set up an on-demand backup for the first of the month Write the backup to an Archive class Cloud Storage bucket
- D. Set up an export job for the first of the month Write the export file to an Archive class Cloud Storage bucket

Answer: D

Explanation:

Explanation

https://cloud.google.com/sql/docs/mysql/backup-recovery/backups#can_i_export_a_backup

https://cloud.google.com/sql/docs/mysql/import-export#automating_export_operations

NEW QUESTION # 136

You have an application that uses Cloud Spanner as a backend database. The application has a very predictable traffic pattern. You want to automatically scale up or down the number of Spanner nodes depending on traffic. What should you do?

- A. Create a Stackdriver alerting policy to send an alert to oncall SRE emails when Cloud Spanner CPU exceeds the threshold. SREs would scale resources up or down accordingly.
- B. Create a cron job that runs on a scheduled basis to review stackdriver monitoring metrics, and then resize the Spanner instance accordingly.
- C. Create a Stackdriver alerting policy to send an alert to webhook when Cloud Spanner CPU is over or under your threshold. Create a Cloud Function that listens to HTTP and resizes Spanner resources accordingly.
- D. Create a Stackdriver alerting policy to send an alert to Google Cloud Support email when Cloud Spanner CPU exceeds your threshold. Google support would scale resources up or down accordingly.

Answer: C

Explanation:

As to mexblood1's point, CPU utilization is a recommended proxy for traffic when it comes to Cloud Spanner. See: Alerts for high CPU utilization The following table specifies our recommendations for maximum CPU usage for both single-region and multi-region instances. These numbers are to ensure that your instance has enough compute capacity to continue to serve your traffic in the event of the loss of an entire zone (for single-region instances) or an entire region (for multi-region instances). - <https://cloud.google.com/spanner/docs/cpu-utilization>

NEW QUESTION # 137

You are using Google Kubernetes Engine with autoscaling enabled to host a new application. You want to expose this new application to the public, using HTTPS on a public IP address. What should you do?

- A. Create a HAProxy pod in the cluster to load-balance the traffic to all the pods of the application. Forward the public traffic to HAProxy with an iptable rule. Configure the DNS name of your application using the public IP of

the node HAProxy is running on.

- B. Create a Kubernetes Service of type NodePort for your application, and a Kubernetes Ingress to expose this Service via a Cloud Load Balancer.
- C. Create a Kubernetes Service of type NodePort to expose the application on port 443 of each node of the Kubernetes cluster. Configure the public DNS name of your application with the IP of every node of the cluster to achieve load-balancing.
- D. Create a Kubernetes Service of type ClusterIP for your application. Configure the public DNS name of your application using the IP of this Service.

Answer: B

Explanation:

Reference: <https://cloud.google.com/kubernetes-engine/docs/tutorials/http-balancer> Create a Kubernetes Service of type ClusterIP for your application. Configure the public DNS name of your application using the IP of this Service. is not right.

Kubernetes Service of type ClusterIP exposes the Service on a cluster-internal IP. Choosing this value makes the Service only reachable from within the cluster so you can not route external traffic to this IP.

Ref: <https://kubernetes.io/docs/concepts/services-networking/service/>

NEW QUESTION # 138

.....

It is universally accepted that the competition in the labor market has become more and more competitive in the past years. In order to gain some competitive advantages, a growing number of people have tried their best to pass the Associate-Cloud-Engineer exam. Because a lot of people hope to get the certification by the related exam, now many leaders of companies prefer to the candidates who have the Associate-Cloud-Engineer Certification. In their opinions, the certification is a best reflection of the candidates' work ability, so more and more leaders of companies start to pay more attention to the Associate-Cloud-Engineer certification of these candidates.
