

100% Pass High Pass-Rate 2V0-15.25 - Certification VMware Cloud Foundation 9.0 Support Dumps

P.S. Free 2026 VMware 2V0-15.25 dumps are available on Google Drive shared by FreeCram: <https://drive.google.com/open?id=1AQwsWczXG7mSDCXxAhnS2GFabp-dhjCg>

To achieve this objective the FreeCram is offering some important and easy-to-use features in FreeCram 2V0-15.25 practice test questions. The first feature of FreeCram 2V0-15.25 exam questions is its availability of VMware Cloud Foundation 9.0 Support 2V0-15.25 exam questions in three formats. These formats hold a high demand in the market and are recommended for instant VMware 2V0-15.25 exam preparation. The name of these three FreeCram 2V0-15.25 exam questions formats is PDF dumps file, desktop practice test software, and web-based practice test software. All these FreeCram 2V0-15.25 Exam Questions formats are easy to use and compatible with all devices, operating systems, and the latest browsers. Choose any FreeCram 2V0-15.25 exam questions format that suits your budget and fulfills your VMware Cloud Foundation 9.0 Support 2V0-15.25 exam preparation need and start preparing today.

Our 2V0-15.25 exam materials have free demos for candidates who want to pass the exam, you are not required to pay any amount or getting registered with us that you can download our dumps. If you want to check the quality of our 2V0-15.25 exam materials, you can download the demo from our website free of charge. Our 2V0-15.25 exam materials demo will fully show you the characteristics of the actual exam question, therefore, you can judge whether you need it or not. We believe that the unique questions and answers of our 2V0-15.25 Exam Materials will certainly impress you. It will help you make decisions what benefit you and help you pass the exam easily. In addition, our expert of FreeCram will provide candidates with specially designed materials in order to access your understanding of various questions. Choosing our 2V0-15.25 exam materials will definitely give you an unexpected results and surprise.

New 2V0-15.25 Exam Simulator & Reliable 2V0-15.25 Exam Online

Nowadays the requirements for jobs are higher than any time in the past. The job-hunters face huge pressure because most jobs require both working abilities and profound major knowledge. Passing 2V0-15.25 exam can help you find the ideal job. If you buy our 2V0-15.25 Test Prep you will pass the exam easily and successfully, and you will realize you dream to find an ideal job and earn a high income. Our product is of high quality and the passing rate and the hit rate are both high.

VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.

Topic 2	<ul style="list-style-type: none"> • Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.
Topic 3	<ul style="list-style-type: none"> • IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.
Topic 4	<ul style="list-style-type: none"> • Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.
Topic 5	<ul style="list-style-type: none"> • Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.

VMware Cloud Foundation 9.0 Support Sample Questions (Q40-Q45):

NEW QUESTION # 40

The administrator has to change the DRS automation level in preparation to upgrade the vCenter. When making this change through VCF Operations, the following error occurs: 'Internal Error: Failed to retrieve vim client'.

What is the possible cause of this error?

- A. Connectivity issue between vCenter and VCF Operations.
- B. Insufficient licensing for the advanced vCenter features.
- C. DRS Automation is already set on the vSphere Client.
- D. The vCenter is overloaded with API requests from VCF Operations.

Answer: A

Explanation:

The error:

"Internal Error: Failed to retrieve vim client"

occurs when VCF Operations cannot establish a functional API session with vCenter. The vim client is the internal vSphere API client library used by VCF Operations to perform cluster actions such as modifying DRS settings, powering on/off workloads, or retrieving inventory.

When this error appears, VMware documentation identifies these common root causes:

* Loss of connectivity between VCF Operations and vCenter

* DNS resolution issues

* Network interruption

* Stale or expired authentication tokens

* Credential mismatch If the vCenter password was changed manually, VCF Operations may be unable to authenticate.

* vCenter services restarting or unavailable If vCenter backend services (vpxd, sts, etc.) are unstable, VCF Operations cannot establish a vim session.

Option A is incorrect-DRS automation state in the vSphere Client does not cause vim client retrieval errors.

Option B (vCenter overloaded by API requests) would cause timeouts, not a vim client initialization failure.

Option D (insufficient licensing) affects feature use, not API connectivity.

NEW QUESTION # 41

After upgrading from VMware Cloud Foundation (VCF) 5.2 to VMware Cloud Foundation (VCF) 9.0 the administrator attempts to enable SSH access through the vCenter console to the newly upgraded VCF Ops instance and is not able to. They attempt to log in through SSH as the root user and they are unable to. What needs to be done to enable SSH access to the VCF Ops instance?

- A. Use VCF Operations to remediate the password
- B. Rollback to snapshot because the upgrade did not work as expected.
- C. Reboot the appliance and enable SSH.
- D. Reset the root password.

Answer: A

Explanation:

In VMware Cloud Foundation (VCF) 9.0, the management of appliance credentials and lifecycle operations is centralized within the VCF Operations Fleet Manager (which subsumes the roles of the legacy SDDC Manager Life Cycle Management).

* **The Problem:** The administrator is unable to log in as root via the console or SSH. This indicates a credential synchronization issue or account lockout, which prevents them from manually enabling SSH via the console (the traditional method).

* **The Solution (Remediate Password):** The "Remediate Password" workflow in VCF Operations allows the administrator to reset and synchronize the root password for VCF components (like the VCF Ops instance itself) directly from the management plane.

* By navigating to Fleet Management > Passwords (or similar path in VCF 9.0), the administrator can select the affected instance and choose Remediate.

* This process updates the password in the centralized database and on the appliance, restoring the ability to log in.

* Once the root access is restored via remediation, the administrator can then proceed to enable SSH (either via the VCF Operations settings UI or the console). Without the correct password (which "Remediate" fixes), SSH cannot be enabled.

Note: Options A and B (Reset/Reboot) are legacy manual steps that do not ensure the VCF inventory database is updated, potentially leading to further "configuration drift" or sync errors. Option C is unnecessary for a credential issue.

NEW QUESTION # 42

An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The following information has been provided about the VCF fleet configuration:

* The VCF fleet consists of a single VCF instance with a single management domain and a single workload domain.

* VCF Automation has a single Organization for VM Apps configured with a VCF Cloud Account for the workload domain.

The administrator has been tasked with creating a new Organization for All Apps to support the developers need to deploy Kubernetes-based applications in a new region in a workload domain.

The administrator attempts to create a new region through the VCF Automation Provider Portal but the VMware NSX manager for the workload domain does not appear on the list of available NSX managers.

What action must the administrator complete to resolve the issue?

- A. Trigger an inventory synch in VCF Operations fleet management.
- **B. Add the SDDC Manager integration for the VCF instance.**
- C. Deploy an additional VCF workload domain cluster.
- D. Deploy a new VCF workload domain.

Answer: B

Explanation:

In VMware Cloud Foundation 9.0 Automation, the Provider Portal must have full visibility into the underlying VCF inventory-including NSX Managers, clusters, regions, vCenters, and SDDC Manager objects-before new regions can be created for Kubernetes-based deployments (All Apps Orgs).

The issue described:

"The NSX Manager for the workload domain does not appear in the list of available NSX Managers" occurs when SDDC Manager is not integrated into VCF Automation. Without this integration, VCF Automation cannot discover workload domains or their associated NSX Managers. As a result, when attempting to create a new region, the NSX Manager list is empty.

The required action is:

Add the SDDC Manager integration under VCF Automation # Provider Portal # Integrations.

This integration enables Automation to pull:

- * NSX Manager inventory
- * vCenter endpoints
- * Workload domain topology
- * Cluster details

Only after this integration is complete will the NSX Manager appear and allow region creation.

Option A and D (deploying new WLD or cluster) are unnecessary-inventory access is the problem, not resources.

Option B (triggering inventory sync) cannot work because no SDDC Manager integration exists.

NEW QUESTION # 43

An administrator has observed that the vSphere Global Inventory is only available from the management domain vCenter. The Global Inventory is not available from the workload domain's vCenter.

Why is the "Global Inventory" missing from the workload domain's vCenter?

- A. Supervisor Management has not been enabled.

- B. An inventory sync was not run following the workload domain creation.
- C. An external VIDB instance has not been configured.
- D. VCF SSO and vCenter Linking have not been configured.

Answer: D

Explanation:

The Global Inventory List (GIL) is only available when multi-vCenter SSO domain linking is configured. In VMware Cloud Foundation, the management domain vCenter is deployed first and becomes the root vCenter for global inventory data. For workload domains, their vCenter Servers must be registered into the same SSO domain and linked with the management-domain vCenter in order for the global inventory data (VMs, hosts, clusters, content libraries) to appear.

If a workload domain vCenter is not SSO-linked, it operates in its own identity domain, and therefore cannot access or present Global Inventory, resulting in exactly the symptom described: the management domain vCenter shows the GIL, while the workload domain vCenter does not.

Option B (Supervisor Management) relates to vSphere with Tanzu and has no impact on Global Inventory.

Option C (inventory sync) is incorrect—there is no manual sync required; GIL relies entirely on SSO linking.

Option D (VIDB) is not related to vCenter linking or inventory visibility; it is used by VCF Identity Broker.

Therefore, the reason the Global Inventory is missing from the workload domain vCenter is that SSO/vCenter Linking has not been configured, which is required for federation across all VCF vCenters.

NEW QUESTION # 44

An administrator is troubleshooting a problem with NSX.

Which command can be used to validate installed NSX VIBs on the ESX host?

- A. `esxtop -b -d 2 -n 100`
- B. `esxcfg software list`
- C. `nsxcli get version`
- D. `esxcli software vib list`

Answer: D

Explanation:

When troubleshooting NSX on an ESXi host, VMware requires verification that NSX VIBs (vSphere Installation Bundles) are installed and in the correct state. VIBs are responsible for NSX datapath, control-plane modules, and kernel extensions on ESXi.

The authoritative and documented method to list VIBs on an ESXi host is the command:

`esxcli software vib list`

This command displays all installed kernel modules, version numbers, NSX packages, and their installation status. For NSX-T (now part of VCF networking), administrators expect to see VIBs such as `asnsx-aggservice`, `nsx-bridge`, `nsx-esx-datapath`, and others. If any required NSX VIBs are missing or inconsistent, the ESXi host will fail to join NSX transport nodes or will show "Not Ready."

Option A (`esxtop`) is for performance monitoring and does not show VIB information.

Option C (`nsxcli get version`) checks NSX version on Edge Nodes or host transport nodes but does not list VIBs.

Option D (`esxcfg software list`) is an outdated and invalid command.

NEW QUESTION # 45

.....

Keep making progress is a very good thing for all people. If you try your best to improve yourself continuously, you will that you will harvest a lot, including money, happiness and a good job and so on. The 2V0-15.25 preparation exam from our company will help you keep making progress. Choosing our 2V0-15.25 Study Material, you will find that it will be very easy for you to overcome your shortcomings and become a persistent person. Just come and buy our 2V0-15.25 learning guide!
