Axis Communications is a global leader in manufacturing and selling network video surveillance solutions. For over 30 years, the company has been offering innovative security solutions that help safeguard people, property and assets. Whether it's a small business or a large enterprise, the company has a wide range of solutions to cater to every security need.

Axis Network Video Exam Sample Questions (Q287-Q292):

NEW QUESTION # 287

How does the AXIS Design Tool allow users to estimate the effects of scene complexity and motion on bandwidth and storage usage?

- A. AXIS Design Tool requires users to manually enter their own estimated bit rate for each camera
- B. Users can upload recorded surveillance video to allow AXIS Design Tool to make estimates
- C. **AXIS Design Tool uses a statistical model based on selected camera model**
- D. Users can view model scenario videos and select the scenario that best matches their scene

Answer: C

Explanation:

The AXIS Design Tool helps users estimate bandwidth and storage usage by using a statistical model based on the selected camera model. This tool takes into account factors such as scene complexity and motion to provide accurate estimates, enabling users to plan their surveillance system more effectively. NEW QUESTION # 288

The purpose of an IR cut filter is to

- **A. avoid unnatural colors in daylight.**
- B. make use of IR wavelengths in daylight.
- C. stop the camera from producing IR light, create a black and white image.

Answer: A

Explanation:

An IR cut filter is used to block infrared light during daylight hours to prevent it from interfering with the camera's sensor. This ensures that the colors captured by the camera appear natural. Without an IR cut filter, the infrared light can cause color distortions, resulting in unnatural-looking images. Axis cameras equipped with IR cut filters switch between day and night modes to optimize image quality in various lighting conditions, as explained in their technical documents and user manuals.

NEW QUESTION # 289

Which device can be used to efficiently display live network video on a monitor with HDMI inputs?

- **A. A video decoder**
- B. A connectivity hub
- C. A video encoder
- D. A video recorder

Answer: A

Explanation:

Axis Official Documentation Extract:

"A video decoder is a device that receives video streams from IP cameras over the network, decodes the streams, and outputs the video to a monitor, typically using HDMI or other standard video outputs. This allows users to view live network video on standard

monitors or televisions without the need for a computer."

- Source: AXIS Video Decoder Product Page

Supporting Extract from Axis Study Guide:

"Video decoders play a crucial role in network video systems where there is a need to display live video feeds on standard monitors. Unlike video encoders, which convert analog video to digital IP video streams, decoders convert IP video streams back into video signals that can be displayed on HDMI or composite video monitors."

- Axis Communications Academy, Network Video Fundamentals, 2022

References:

Axis Video Decoder Product Documentation

Axis Communications Academy, Network Video Fundamentals, 2022 (p. 35-36) Summary: A video decoder is the correct device to use when you need to display live network video on an HDMI monitor. It takes the network stream and converts it to a format compatible with the monitor's HDMI input, which neither a video encoder, recorder, nor a connectivity hub can do directly.

NEW QUESTION # 290

The term f-stop, or f-number,

- A. Relates the focal length of the lens to the zoom factor.
- B. Measures the lens' capability to focus on objects at short distance.
- C. Measures the lens' capability to collect light.
- D. Is the end position of the focus motor in an autofocus system.

Answer: C

NEW QUESTION # 291

DRAG DROP

Match each function to the correct video surveillance system component. Drag each gray box from the left column to the matching blue box in the right column.

Answer:

Explanation:
