Your skills will advance and your resume will be enhanced thanks to the Microsoft AZ-800 Certification.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q253-Q258):

NEW QUESTION # 253

You have a Windows Server container host named Server1 that has a single disk. On Server1, you plan to start the containers shown in the following table.

Which isolation mode can you use for each container? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Graphical user interface, text, application, email Description automatically generated

NEW QUESTION # 254

Your company has offices in Boston and Montreal. The offices are connected by using a 10-Mbps WAN link that is often saturated. The office in Boston contains the following:

* An Active Directory Domain Services (AD DS) domain controller named DC1.

* A server named Server1 that runs Windows Server and has the File Server role installed. The office in Montreal contains 20 client computers that run Windows 10. Montreal does NOT have any servers.

The company plans to deploy a new line of business (LOB) application to all the client computers. The installation source files for the application are in \\Server1\Apps.

Answer:

Explanation:

NEW QUESTION # 255

Your network contains an on-premises Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains the objects shown in the following table.

You plan to sync contoso.com with an Azure Active Directory (Azure AD) tenant by using Azure AD Connect. You need to ensure that all the objects can be used in Conditional Access policies. What should you do?

- A. Select the **Configure Hybrid Azure AD join option**.
- B. Clear the **Configure device writeback option**.
- C. Change the scope of Group1 and Group2 to **Global**.
- D. Change the scope of Group2 to **Universal**.

Answer: A

Explanation:

Hybrid Azure AD join needs to be configured to enable Computer1 to be used in Conditional Access Policies. Synchronized users, universal groups and domain local groups can be used in Conditional Access Policies.

NEW QUESTION # 256

Task 2

You need to ensure that you can manage SRV1 remotely by using PowerShell.

Answer:

Explanation:

See the solution of this Task below.

Explanation:

To manage SRV1 remotely using PowerShell, you'll need to set up PowerShell Remoting. Here's a step-by-step guide:

Step 1: Enable PowerShell Remoting on SRV1. On SRV1, run the following command to enable PowerShell Remoting:

Enable-PSRemoting -Force

This command configures the computer to receive PowerShell remote commands that are sent by using the WS-Management technology.

Step 2: Configure the TrustedHosts List (If Needed). If you're managing SRV1 from a computer that is not part of the same domain, you'll need to add the managing computer's name to the TrustedHosts list on SRV1:

Set-Item wsman:\localhost\Client\TrustedHosts -Value "ManagingComputerName" -Concatenate -Force -Replace

"ManagingComputerName" with the name of your managing computer.

Step 3: Start a Remote Session From your managing computer, start a remote session with SRV1 using the Enter-PSSession cmdlet: Enter-PSSession -ComputerName SRV1 -Credential (Get-Credential)

This command prompts you for credentials and then starts a remote session with SRV1.

Step 4: Run Remote Commands Once the remote session is established, you can run any PowerShell command as if you were directly on SRV1. For example:

Get-Service

This command gets the status of services on SRV1.

Step 5: Exit the Remote Session When you're finished, exit the remote session:

Exit-PSSession

Note: Ensure that both the managing computer and SRV1 are properly configured to communicate over the network, and that any firewalls allow for the necessary ports (default is 5985 for HTTP and 5986 for HTTPS) to be open for WS-Management traffic¹². By following these steps, you should be able to manage SRV1 remotely using PowerShell. Make sure you have the appropriate administrative privileges to perform these actions.

NEW QUESTION # 257

Drag and Drop Question

You deploy a single-domain Active Directory Domain Services (AD DS) forest named contoso.com.

You deploy a server to the domain and configure the server to run a service.

You need to ensure that the service can use a group managed service account (gMSA) to authenticate.

Which three PowerShell cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

Answer:

Explanation:

NEW QUESTION # 258

.....

Dear candidates, have you thought to participate in any Microsoft AZ-800 exam training courses? In fact, you can take steps to pass the certification. Real4test Microsoft AZ-800 Exam Training materials bear with a large number of the exam questions you need, which is a good choice. The training materials can help you pass the certification.
