NEW QUESTION # 59

Which of the following best describes the purpose of the Architecture Requirements Specification?

- A. It defines the scope and approach to complete an architecture project
- B. It contains an assessment of the current architecture requirements
- **C. It provides a set of statements that outline what a project must do to comply with the architecture**
- D. It is sent from the sponsor and triggers the start of an architecture development cycle

Answer: C

Explanation:

Explanation

The Architecture Requirements Specification is one of the TOGAF deliverables that provides a set of quantitative statements that outline what an implementation project must do in order to comply with the architecture¹². It is a companion to the Architecture Definition Document, which provides a qualitative view of the solution and aims to communicate the intent of the architect. The Architecture Requirements Specification provides a quantitative view of the solution, stating measurable criteria that must be met during the implementation of the architecture³. It typically forms a major component of an implementation contract or contract for more detailed Architecture Definition⁴. References:

- **A. Ensuring compliance with internal and external standards and regulatory obligations**
- B. Interacting with the CxO level on Enterprise Architecture
- C. Managing Stakeholders and their requirements
- D. Creating and maintaining the Statement of Architecture Work through out the ADM cycle

Answer: A

NEW QUESTION # 61

Which statement best describes iteration and the ADM?

- A. The ADM is iterative within the first cycle and then between phases
- **B. The ADM is iterative, over the whole process between phases and within phases**
- C. The ADM is sequential Iteration is applied within phases
- D. The level of detail is defined once and applies to all iterations

Answer: B

NEW QUESTION # 62

Consider the illustration.

□
What are the items labelled A, B and C?

- A. A-Enterprise Strategic Architecture, B-Segment Architecture, C-Solutions Architecture
- B. A-Enterprise Architecture, B-Architecture Building Blocks, C-Solutions Building Blocks
- **C. A-Enterprise Continuum, B-Architecture Continuum, C-Solutions Continuum**
- D. A-Architecture Vision, B-Business Architecture, C-Information Systems Architecture

Answer: C

Explanation:

The illustration shows the relationship between the Enterprise Continuum, the Architecture Continuum, and the Solutions Continuum, which are key concepts in the TOGAF framework. The Enterprise Continuum is a view of the Architecture Repository that shows how generic foundation architectures can be leveraged and specialized to support the requirements of an individual organization. The

Architecture Continuum specifies a structured classification for architectural artifacts, such as models, patterns, and descriptions, that can be reused and adapted across different domains and levels of abstraction. The Solutions Continuum identifies implemented solutions that support various stages of business and IT capability evolution, such as common systems, industry solutions, and organization-specific solutions. The illustration also shows how the architecture context and requirements are influenced by external factors, such as business drivers, stakeholders, and standards, and how they shape the generic and specific architectures and solutions. The illustration also shows how the deployed solutions become part of the architecture context for future iterations of the architecture development cycle. References:

NEW QUESTION # 63

Which of the following is included as part of Architecture Governance?

- A. Ensuring compliance with internal and external standards and regulatory obligations
- B. Interacting with the CxO level on Enterprise Architecture
- C. Managing Stakeholders and their requirements
- D. Creating and maintaining the Statement of Architecture Work throughout the ADM cycle

Answer: A

Explanation:

Ensuring compliance with internal and external standards and regulatory obligations is one of the activities included as part of Architecture Governance. Architecture Governance is the practice and orientation by which enterprise architectures and other architectures are managed and controlled at an enterprise-wide level. It involves establishing processes, roles, responsibilities, policies, and standards to ensure that architectures are aligned with the enterprise's strategy and objectives, and meet the quality and performance requirements.
