Answer: B

NEW QUESTION # 129
Direct-internet-access for trusted business applications is beneficial for:

- A. Simplifying the network architecture
- B. Reducing latency and improving access to cloud resources
- C. Enhancing the user experience by providing quicker access
- D. Increasing security risks by exposing applications to the internet

Answer: A,B,C

NEW QUESTION # 130
Cisco Secure Cloud Analytics specializes in:

- A. Only managing physical network devices
- B. Reducing the amount of actionable security intelligence
- C. Detecting threats in cloud and hybrid environments by analyzing traffic patterns

- D. Encouraging a siloed approach to cloud security

Answer: C

NEW QUESTION # 131

A security analyst detects an employee endpoint making connections to a malicious IP on the internet and downloaded a file named Test0511127691C.pdf. The analyst discovers the machine is infected by trojan malware. What must the analyst do to mitigate the threat using Cisco Secure Endpoint?

- A. Start isolation of the machine on the Computers tab
- B. Create an IP Block list and add the IP address of the affected endpoint
- C. Enable scheduled scans to detect and block the executable files
- D. Identify the malicious IPs and place them in a blocked list

Answer: A

Explanation:
In Cisco Secure Endpoint (formerly AMP for Endpoints), isolating an infected machine is the most immediate action to contain the threat. Isolation cuts the endpoint off from all network communication except to the management console, allowing the analyst to investigate further while preventing lateral movement or data exfiltration.
According to SCAZT Section 6: Threat Response (Pages 114-117), isolation is a recommended first response in the event of malware detection.
