ISTQB-CTFL시험대비 최신버전 문제, ISTQB-CTFL최신 시험 예상문제 모음

ISTQB ISTQB-CTFL시험을 어떻게 패스할가 고민그만하시고 Fast2test의ISTQB ISTQB-CTFL시험대비덤프를 데려가 주세요. 가격이 착한데 비해 너무나 훌륭한 덤프품질과 높은 적응율은 Fast2test가 아닌 다른곳에서 찾아볼수 없는 혜택입니다. ISTQB ISTQB-CTFL 덤프구매전 데모부터 다운받아 공부해보세요.

최신 Foundation Level ISTQB-CTFL 무료샘플문제 (Q135-Q140):

질문 # 135

Which statement is true regarding confirmation testing and regression testing?

- A. Confirmation testing is an optional activity whilst regression testing is not negotiable.
- B. TESTER Involvement is essential whilst running retesting and regression testing.
- C. Testers' involvement is essential whilst running retesting and regression testing.
- D. Confirmation testing aims to verify that a defect has been resolved and regression testing ensuring that existing functionality still works after a change.
- E. Confirmation testing confirms the quality of the test being run while regression testing ensures that the software still works after a change has been made.

정답: D

설명:

Confirmation testing, also known as retesting, is conducted to verify that specific defects have been fixed. Regression testing, on the other hand, is performed to ensure that recent changes have not adversely affected existing features of the software. Both types of testing are crucial for maintaining the integrity and quality of the software after modifications.

질문 # 136

Why it is essential that defects found in a review be reported objectively?

- A. In order to facilitate easy entry of detected defects in a OTS (Defect Tracking System)
- **B. In order to allow the author of reviewed work product(S) to take the feedback positively as an effort at improving the product (S) and not as a personal assault**
- C. In order to allow augmentation of existing checklists used for reviewing the work product (S)
- D. In order to allow the review moderator to easily understand them, and assign them to the right developer for fixing

정답: B

설명:

The purpose of a review is to find defects and improve the quality of the work product, not to criticize or blame the author. Reporting defects objectively means describing them factually and constructively, without using negative or emotional language that could offend the author or damage their motivation. This way, the author can take the feedback positively as an effort at improving the product and not as a personal assault. 질문 # 137

Which of the following provides the BEST description of statement coverage?

- A. A black-box test technique which uses a state table to derive test cases
- B. A white-box test technique which covers the decision results which determine the next statement to be executed
- **C. A white-box test technique which focuses on the percentage of executable statements that has been executed by a test suite**
- D. An experience-based test technique in which test cases are based on the tester's knowledge of past failures

정답: C

설명:

Statement coverage is a white-box test technique which focuses on executing all possible statements in the code at least once during testing. This helps in determining the percentage of executable statements that have been executed by the test suite, aiming to ensure that all parts of the program have been tested at least once (ISTQB Main Web).

질문 # 138

Which of the following isNOTa common objective of testing?

- A. Providing information on the status of the system
- **B. Debugging the software to find the reason for defects**
- C. Preventing defects
- D. Finding defects in the software

정답: B

설명:

Debugging the software to find the reason for defects is not a common objective of testing, but rather a task of development or maintenance. Debugging is a process of locating and fixing errors in the software code, while testing is a process of finding and reporting defects in the software behavior or quality. Testing does not aim to fix defects, but rather to provide information on their existence and impact. The other options are common objectives of testing. Finding defects in the software is one of the main objectives of testing, as it helps to improve the quality and reliability of the software. Preventing defects is another objective of testing, as it helps to avoid rework and reduce costs and risks. Providing information on the status of the system is another objective of testing, as it helps to support decision making and risk management. 질문 # 139

The acceptance criteria associated with a user story:

- A. are often documented following in rule-oriented format using the following template: "As a [role], I want [feature], so that I can [benefit]"

- B. can be written in different formats and represent an aspect of a user story referred to as confirmation' of the so called "3 C's"
- C. are often written in a rule-oriented format using the template referred to as "Given/When/Then"
- D. must be written in one of the two following formats: scenario-oriented or rule-oriented

정답: B

설명:

The acceptance criteria associated with a user story are the conditions that must be met for the user story to be considered done and to deliver the expected value to the user. They are often written in different formats, such as rule-oriented, scenario-oriented, or table-oriented, depending on the nature and complexity of the user story. They represent an aspect of a user story referred to as confirmation, which is one of the so called "3 C" s" of user stories. The other two aspects are card and conversation. Card refers to the concise and informal description of the user story, usually following the template: "As a [role], I want [feature], so that I can [benefit]". Conversation refers to the ongoing dialogue between the stakeholders and the team members to clarify and refine the user story and its acceptance criteria. Therefore, option C is the correct answer.
