

C-IBP-2502 Prüfungsübungen & C-IBP-2502 Prüfungen

Außerdem sind jetzt einige Teile dieser EchteFrage C-IBP-2502 Prüfungsfragen kostenlos erhältlich: <https://drive.google.com/open?id=13A23s12tHy5f5QIt56U6t8NuaqQvFeme>

Die Fragenkataloge zur SAP C-IBP-2502 Zertifizierungsprüfung aus EchteFrage ist eine Sammlung der Erfahrungen der zertifizierten IT-Fachleute in der IT-Branche und das Ergebnis unserer Innovation. Wir garantieren für Ihre einjährige kostenlose Aktualisierung, nachdem Sie unsere online Prüfungsfragen zur SAP C-IBP-2502 Zertifizierung gekauft haben. Wenn die Fragenkataloge zur SAP C-IBP-2502 Zertifizierungsprüfung irgend ein Qualitätsproblem haben oder Sie die SAP C-IBP-2502 Zertifizierungsprüfung nicht bestehen, erstatten wir alle Ihren bezahlten Einkaufsgebühren zurück.

EchteFrage hilft Ihnen, SAP C-IBP-2502 Prüfungsfragen und Antworten in einer echten Umgebung zu machen. Wenn Sie Einsteiger sind und Ihre beruflichen Fähigkeiten verbessern wollen, werden die Fragenkataloge zur SAP C-IBP-2502 Zertifizierungsprüfung von EchteFrage Ihnen helfen, Ihren Traum Schritt für Schritt zu verwirklichen. Wir werden alle Ihren Fragen bezüglich der Prüfung lösen. Innerhalb eines Jahres bieten wir Ihnen kostenlosen Update-Service. Bitte schenken Sie unserer Website mehr Aufmerksamkeit.

Das neueste C-IBP-2502, nützliche und praktische C-IBP-2502 pass4sure Trainingsmaterial

Wir EchteFrage bieten Ihnen verschiedene Unterlagensversionen, die Ihre Nutzung erleichtern können. Die PDF-Versionen können das Lesen erleichtern und Ihnen die aktuellen SAP C-IBP-2502 Prüfungsfragen zeigen, Die Software-Versionen sind die Simulationssoftwares, die Ihre Vorbereitungssituation auf jeden Fall testen. Wenn Sie wissen wollen, ob Sie sich für SAP C-IBP-2502 Prüfung gut bereit sind, können Sie helfen, Ihre Stärke und Schwäche ganz schnell finden, um Ihren nächsten Lernplan zu erstellen.

SAP C-IBP-2502 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Demand Planning: This section measures the skills of demand planners and focuses on the core concepts of demand planning. It includes understanding forecasting techniques, demand sensing, and demand propagation. Candidates are tested on their ability to manage demand signals and align planning with business objectives.
Thema 2	• Planning Operators & Application: JobsThis section is designed for demand planners and focuses on the configuration and execution of planning operators and application jobs. It includes an understanding of how these tools automate planning processes and improve system performance. Candidates will be tested on their ability to configure and execute jobs that support various planning functions.

Thema 3	• Master Data: This section is relevant to master data specialists and focuses on managing essential data for planning activities. It includes an understanding of product, location, and resource master data within SAP. Candidates will be tested on how to maintain accurate and consistent data to support planning functions.
Thema 4	• Solution Architecture & Data Integration: This exam section is aimed at solution architects who work with SAP data integration. It covers the fundamental concepts of integrating external data sources with SAP, ensuring seamless data flow between systems. Candidates need to understand how to maintain system architecture for optimized performance and reliability.
Thema 5	• Analytics and Reporting: This section evaluates the expertise of reporting specialists in generating and interpreting reports within SAP. It covers key analytical tools and reporting functions that provide insights into planning performance. Candidates will be assessed on their ability to extract, analyze, and present data effectively to support business decisions.

SAP Certified Associate - SAP IBP for Supply Chain C-IBP-2502 Prüfungsfragen mit Lösungen (Q18-Q23):

18. Frage

Which sourcing methods are required to identify the product flow through the network? Note: There are 3 correct answers to this question.

- A. Sourcing via Costs
- B. Unspecified Sourcing
- C. Sourcing via Demand Prioritization
- D. Customer Sourcing Rule
- E. Sourcing via Production

Antwort: A,D,E

Begründung:

Sourcing methods in SAP IBP define how products flow through the supply chain network, configured via master data (e.g., Production Source, Transportation Lane).

* Option A: Sourcing via Production This is correct. Production sourcing (via Production Source of Supply) defines product flow from manufacturing locations, a core method, per SAP IBP's supply planning documentation.

* Option B: Sourcing via Demand Prioritization This is incorrect. Demand prioritization affects allocation, not the physical flow definition.

* Option C: Unspecified Sourcing This is incorrect. "Unspecified Sourcing" is not a standard method; sourcing must be explicitly defined.

* Option D: Customer Sourcing Rule This is correct. Customer sourcing rules (via SOURCECUSTOMER) specify which locations supply customers, defining flow, per SAP IBP's network setup.

* Option E: Sourcing via Costs This is correct. Cost-based sourcing (e.g., via Transportation Lane costs) determines optimal flow in optimization, per SAP IBP's optimizer documentation.

Thus, A, D, and E identify product flow, per SAP IBP's official sourcing methods. (Note: Original had C typo; corrected to D.)

19. Frage

Which planning operators can be executed in a time-series-based planning area? Note: There are 2 correct answers to this question.

- A. Shelf Life Heuristics
- B. Constrained Forecast Run
- C. Finite Heuristics
- D. Deployment Optimizer

Antwort: B,C

20. Frage

You are working with inventory key figures. What are some of the business scenarios where you can use the Last Period Aggregation function? Note: There are 2 correct answers to this question.

- **A. Searching for and returning the last not-null value of the inventory key figure**
- B. Calculating the value of inventory on any level from the time profile, ensuring flexibility of calculation
- **C. Calculating how many periods inventory is going to last based on the planned demand**
- D. Calculating the value of inventory on a weekly basis, using static aggregation from the daily level

Antwort: A,C

Begründung:

The Last Period Aggregation function (LASTPERIOD) in SAP IBP retrieves the most recent value in a time horizon for a key figure, useful for inventory analysis. Its applications align with SAP IBP's calculation capabilities.

* Option A: Calculating the value of inventory on a weekly basis, using static aggregation from the daily level This is incorrect. Static aggregation (e.g., sum, average) across periods isn't what LASTPERIOD does; it returns the last period's value, not an aggregate.

* Option B: Calculating how many periods inventory is going to last based on the planned demand This is correct. Using the last period's inventory value (via LASTPERIOD) divided by planned demand can estimate inventory duration, a common scenario in inventory planning, per SAP IBP's documentation.

* Option C: Searching for and returning the last not-null value of the inventory key figure This is correct. LASTPERIOD retrieves the most recent non-null value in the horizon, ideal for tracking current inventory levels, per SAP IBP's calculation guides.

* Option D: Calculating the value of inventory on any level from the time profile, ensuring flexibility of calculation This is incorrect. LASTPERIOD is time-specific (last period), not flexible across all levels; it's not a general aggregation method.

Thus, B and C are valid scenarios for Last Period Aggregation, per SAP IBP's official use cases.

21. Frage

Model configuration allows the attributes of a master data type to be assigned as key figures. Which feature is relevant for this type of object?

- **A. This object usually provides a single value for a unique planning combination**
- B. This type of key figure is not usually stored and it cannot be editable
- C. This type of key figure has better performance than a time-independent key figure
- D. This object contains user-defined criteria that monitor the running of business plans

Antwort: A

Begründung:

In SAP IBP, the "Attribute as Key Figure" feature allows master data attributes (e.g., Product Category) to be used as key figures, configured in the Planning Areas app, per SAP IBP's documentation.

* Option A: This type of key figure is not usually stored and it cannot be editable This is incorrect.

Attribute key figures are stored (sourced from master data) and can be editable if configured as such, not inherently non-editable.

* Option B: This type of key figure has better performance than a time-independent key figure This is incorrect. Performance depends on usage, not a guaranteed advantage over other time-independent key figures.

* Option C: This object usually provides a single value for a unique planning combination This is correct. An attribute key figure (e.g., Product Price) provides one static value per planning combination (e.g., PERPROD), a defining feature, per SAP IBP's configuration guides.

* Option D: This object contains user-defined criteria that monitor the running of business plans This is incorrect. This describes alerts or KPIs, not attribute key figures.

Thus, C is the relevant feature, per SAP IBP's official definition.

22. Frage

Which prerequisites must be met to maintain data types via the SAP IBP, add-in for Microsoft Excel? Note: There are 2 correct answers to this question.

- A. The Normalized setting is available in the Planning Area
- **B. The Inquire tab is activated in Microsoft Excel**
- **C. An applicable business catalog is assigned to your business role**
- D. Restriction types are set correctly

Antwort: B,C

Begründung:

Maintaining master data types via the SAP IBP Excel add-in (e.g., adding Products, Locations) requires specific system and user setup, as per SAP IBP's Excel integration guidelines.

* Option A: The Normalized setting is available in the Planning Area. This is incorrect. "Normalized" is not a standard setting in SAP IBP planning areas related to master data maintenance. It may refer to data normalization conceptually, but it's not a prerequisite.

* Option B: Restriction types are set correctly. This is incorrect. "Restriction types" is not a defined term in SAP IBP for Excel-based master data maintenance. Restrictions might apply to planning filters, not data types.

* Option C: The Inquire tab is activated in Microsoft Excel. This is correct. The Inquire tab (an Excel add-in) must be enabled to support advanced features like master data maintenance in SAP IBP's Excel UI, ensuring compatibility and functionality, per SAP's technical requirements.

* Option D: An applicable business catalog is assigned to your business role. This is correct. Users need a business role with a catalog (e.g., SAP_BR_PLANNER) that includes permissions for master data maintenance (e.g., via the "Manage Master Data" tile), per SAP IBP's security model.

Thus, C and D are prerequisites for maintaining data types in Excel, per SAP IBP's official setup documentation.

23. Frage
