- A. Source
- B. Difficulty
- C. Rationale
- D. Risk

Answer: D

NEW QUESTION # 174
Which of the following are principles of Requirements Engineering? (Select 2 answers.)

- A. Systems should be isolated from proper understanding.

- B. Changing requirements are the exception, not the normal case.
- C. Requirements should be viewed as means to an end, not the end in itself.
- D. Requirements Engineering is about satisfying only users' needs.
- E. Non-validated requirements are worthless.

Answer: C,E

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
IREB defines a set of RE principles. Principle 1 states that requirements are a means to an end (such as reduced risk and successful systems), not an end in themselves; they support achieving project and business goals. Principle 6 states that non-validated requirements are worthless because unvalidated statements may be incorrect, incomplete, inconsistent or misaligned with stakeholder needs. Requirements normally change over time; change is expected, not exceptional. Systems cannot be understood in isolation from their environment, and RE must consider all relevant stakeholders, not only users. Hence options A and D reflect official principles; the others contradict them.
