EMC - D-PVM-OE-01 - Dell Technologies PowerMax Operate Useful Pdf Torrent

The EMC D-PVM-OE-01 certification exam is one of the hottest and career-oriented Dell Technologies PowerMax Operate (D-PVM-OE-01) exams. With the Dell Technologies PowerMax Operate (D-PVM-OE-01) exam you can validate your skills and

upgrade your knowledge level. By doing this you can learn new in-demand skills and gain multiple career opportunities. To do this you just need to enroll in the EMC D-PVM-OE-01 Certification Exam and put all your efforts to pass this important EMC D-PVM-OE-01 Exam Questions.

EMC Dell Technologies PowerMax Operate Sample Questions (Q96-Q101):

NEW QUESTION # 96

How is the Host I/O served after running the Non-Disruptive Migration cutover command?

- A. Host I/O sent to the new storage system is replicated to the old storage system using SRDF Pass- Through
- B. Host I/O is sent only to the old storage system and replicated to the new storage system using SRDF/S
- C. Host I/O sent to the old storage system is replicated to the new storage system using SRDF Pass- Through
- D. Host I/O is sent only to the new storage system and replicated to the old storage system using SRDF/S

Answer: C

NEW QUESTION # 97

A systems administrator wants to move an application to VMAX3 storage. The application being migrated has no performance information available, including response time and average I/O size.

Based on Dell Technologies' recommendations, which service level should be assigned?

- A. Bronze
- B. Gold
- C. Diamond
- D. Optimized

Answer: D

NEW QUESTION # 98

Your organization is preparing for a major software update, and it is crucial to ensure data integrity during this process. As a system administrator, create a secure snapshot named "Stor1" from the storage group

"StorGroup1." The snapshot cannot be deleted for two days to safeguard against any potential data loss during the update.

Using the simulator, complete the operation.

Answer:

Explanation:

See the explanation for step by step solution.

Explanation:

We need to create a secure snapshot named "Stor1" from the storage group "StorGroup1" in the Unisphere for PowerMax simulator, and the snapshot should be protected from deletion for two days.

Here's a step-by-step guide on how to do this, based on typical Unisphere functionality:

Steps:

1. Launch the Simulator and Navigate to the Storage Groups Section

* Open Unisphere for PowerMax in your web browser.

* Log in to the simulator (you should already be logged in with the array SID 1762 selected).

* In the left-hand navigation pane, click onStorageand then selectStorage Groups.

2. Locate and Select "StorGroup1"

* In the Storage Groups view, you'll see a list of all storage groups on the array.

* Find the storage group named "StorGroup1".

* Click on the name "StorGroup1" to open its details view.

3. Initiate the Snapshot Creation Process

* Within the "StorGroup1" details view, look for an option related to creating snapshots or protecting the storage group. This might be a button labeled:

* "Protect"

* "Create Snapshot"

* "SnapVX"

* Or an icon representing snapshot creation.

- * Click the appropriate button or icon to start the snapshot creation process.
- 4. Configure Snapshot Settings
 - * A new window or panel will appear, allowing you to configure the snapshot settings.
 - * Snapshot Name: Enter Stor1 as the snapshot name.
 - * Snapshot Technology: Select SnapVX (or a similar option) as the snapshot technology.
 - * Secure Snapshot: This is crucial. Look for an option labeled "Secure Snapshot," "Enable Secure Snap," "Secure Snap," or something similar. Check this option.
 - * Retention/Expiration: You need to set the retention period for the secure snapshot. This will define how long the snapshot cannot be deleted. There are usually a few ways to configure this:
 - * Expiration Time: Set an explicit expiration date and time that is two days from now.
 - * Retention Period: Specify a retention period of 2 days.
 - * No Expiry: This option is not what we want here. We want the snap to be secure for 2 days.
 - * Choose the appropriate option to make the snapshot undeletable for two days.
 - * Other Settings: Review any other available settings. You might be able to choose between creating a new snapshot or linking to an existing one. Select the option to create a new snapshot.
- 5. Create the Snapshot
 - * After configuring all the snapshot settings, review them carefully to ensure they are correct.
 - * Click the button to create the snapshot. This button might be labeled:
 - * "Run Now"
 - * "OK"
 - * "Create"
 - * "Finish"
- 6. Verify Snapshot Creation (Optional)
 - * After the snapshot creation operation completes, you can verify that the snapshot was created successfully.
 - * Go back to the "StorageGroup1" details view.
 - * Look for a tab or section related to snapshots (e.g., "Snapshots," "TimeFinder," "Local Replication").
 - * You should see the "Stor1" snapshot listed there, and its status should indicate that it's a secure snapshot with the correct retention period (2 days).

NEW QUESTION # 99

A VMAX3 array has been configured with two Storage Resource Pools (SRP) Source volumes are assigned to SRP_1 and target volumes are assigned to SRP_2. A TimeFinder SnapVX snapshot of the source volumes is linked to the target volumes in the default mode What will happen when there are new host writes to the source volumes?

- A. Snapshot deltas will be stored in SRP__2
- B. Snapshot deltas will be stored in the Reserved Capacity of SRP_1
- C. Snapshot deltas will be stored in SRP_1
- D. Snapshot deltas will be stored in the Reserved Capacity of SRP_2

Answer: C

NEW QUESTION # 100

Place the steps to create a snapshot in Unisphere for PowerMax in the correct order

□

Answer:

Explanation:

□ Explanation:

Okay, I'm ready to arrange those steps for creating a snapshot in Unisphere for PowerMax in the correct order, based on the image provided.

Here is the correct sequence, along with explanations:

Correct Order:

- * Select a PowerMax storage system from the navigation pane Storage > Storage Groups.
- * Why: This is the starting point in Unisphere. You need to navigate to the "Storage Groups" section within the specific PowerMax array where you intend to create the snapshot.
- * Select a Storage Group and click Protect.
- * Why: You're choosing the storage group that contains the data you want to snapshot. Clicking "Protect" initiates the process of creating a data protection operation (in this case, a snapshot).

- * In the Protect Wizard, if not already selected, select Create a Snapshot using SnapVX from the Select Technology tab and click Next.
- * Why: This specifies that you want to use the SnapVX technology to create a snapshot. SnapVX is the snapshot feature in PowerMax arrays.
- * In the Configure SnapVX page, select whether to create a snapshot or reuse an existing snapshot along with the expiry type.
- * Why: Here, you define the core parameters of the snapshot:
- * Create a new snapshot: This is what you'd typically do for a new point-in-time copy.
- * Reuse an existing snapshot: In some cases, you might want to update an existing snapshot.
- * Expiry type: This determines how long the snapshot will be retained (e.g., a specific duration or until manually deleted).
- * Click Advanced Options to see the advanced options and Enable Secure Snaps.
- * Why: This allows you to configure more granular settings for the snapshot, including:
- * Secure Snaps: Enabling this option prevents the snapshot from being deleted before its expiry time, adding an extra layer of protection.
- * Verify the selections in the summary page, and click Run Now or Add to Job List.
- * Why: This is the final step before creating the snapshot:
- * Summary page: Review all the settings you've configured.
- * Run Now: Immediately creates the snapshot.
- * Add to Job List: Schedules the snapshot creation for later.
- * Select a PowerMax storage system from the navigation pane Storage > Storage Groups.
- * Select a Storage Group and click Protect.
- * In the Protect Wizard, if not already selected, select Create a Snapshot using SnapVX from the Select Technology tab and click Next.
- * In the Configure SnapVX page, select whether to create a snapshot or reuse an existing snapshot along with the expiry type.
- * Click Advanced Options to see the advanced options and Enable Secure Snaps.
- * Verify the selections in the summary page, and click Run Now or Add to Job List.
