Now is not the time to be afraid to take any more difficult CyberArk CDE-CPC Recertification CPC-CDE-RECERT certification exams. Our CPC-CDE-RECERT learning quiz can relieve you of the issue within limited time. Our website provides excellent CPC-CDE-RECERT learning guidance, practical questions and answers, and questions for your choice which are your real strength. You can take the CyberArk CPC-CDE-RECERT Training Materials and pass it without any difficulty.

LatestCram is a platform that will provide candidates with most effective CPC-CDE-RECERT study materials to help them pass their exam. It has been recognized by all of our customers, because it was compiled by many professional experts of our website. Not only did they pass their exam but also got a satisfactory score. These are due to the high quality of our CPC-CDE-RECERT study torrent that leads to such a high pass rate.

Pass Guaranteed 2026 CyberArk CPC-CDE-RECERT: CyberArk CDE-CPC Recertification –High-quality 100% Accuracy

To make you capable of preparing for the CyberArk CPC-CDE-RECERT exam smoothly, we provide actual CyberArk CPC-CDE-RECERT exam dumps. Hence, our accurate, reliable, and top-ranked CyberArk CPC-CDE-RECERT exam questions will help you qualify for your CyberArk CDE-CPC Recertification CPC-CDE-RECERT Certification. Do not hesitate and check out CyberArk CDE-CPC Recertification CPC-CDE-RECERT practice exam to stand out from the rest of the others.

CyberArk CDE-CPC Recertification Sample Questions (Q10-Q15):

NEW QUESTION # 10

Which component supports the required communication to send audit logs from Privilege Cloud through the Syslog protocol to a SIEM application?

- A. CyberArk Identity Connector
- B. CyberArk Syslog Writer
- C. Privilege Cloud Connector
- D. Secure Tunnel

Answer: D

Explanation:

CyberArk's Privilege Cloud documentation for SIEM integration (Syslog) states that to connect to SIEM in Privilege Cloud, you must first deploy the Secure Tunnel.

That means the Secure Tunnel is the required component that enables the communication path for sending Privilege Cloud audit logs via Syslog (TCP/TLS) to your SIEM.

Why the other options are not correct for this Privilege Cloud Syslog requirement:

* A (CyberArk Syslog Writer) is typically referenced in CyberArk Identity / ISP logging contexts, not as the required Privilege Cloud SIEM transport component. (Privilege Cloud SIEM doc calls out Secure Tunnel explicitly.)

* C (Privilege Cloud Connector) is not what the SIEM/Syslog doc identifies as the required prerequisite; it specifically calls out Secure Tunnel.

* D (CyberArk Identity Connector) is used to integrate directory services (AD/LDAP) with CyberArk Identity/Identity Administration, not as the Privilege Cloud Syslog transport prerequisite.

NEW QUESTION # 11

How should you configure PSM for SSH to support load balancing?

- A. by using a network load balancer
- B. in PVWA > Options > PSM for SSH Proxy > Servers
- C. in PVWA > Options > PSM for SSH Proxy > Servers > VIP
- D. by editing sshd.config on the all the PSM for SSH servers

Answer: C

NEW QUESTION # 12

You are implementing LDAPS Integration for a standard Privilege Cloud environment.

Which information must be provided to the CyberArk Privilege Cloud support team through a Service Request? (Choose 2.)

- A. remote port set during secure tunnel configuration for each domain controller to be integrated
- B. LDAP bind username and password used to authenticate to the directory to be integrated C Domain Base Context used to locate the users and groups in the Active Directory to be integrated
- C. Fully Qualified Domain Name and IP Address of the domain controllers to be integrated
- D. LDAPS certificate chain for all domain controllers to be integrated

Answer: A,D

Explanation:

When implementing LDAPS Integration for a standard Privilege Cloud environment, certain information is crucial and must be provided to the CyberArk Privilege Cloud support team through a Service Request. The necessary details include:

* LDAPS certificate chain for all domain controllers to be integrated (Option A): This information is critical to establishing a trusted secure connection between the Privilege Cloud and the domain controllers using LDAP over SSL (LDAPS).

* Fully Qualified Domain Name and IP Address of the domain controllers to be integrated (Option D):

This information is essential for accurately identifying and configuring the network connections to each domain controller that will be integrated with the Privilege Cloud.

Reference: The process of setting up LDAPS integration typically requires detailed network and security information about the domain controllers to ensure secure and reliable connectivity. CyberArk support documentation and service request forms usually specify the need for these details.

NEW QUESTION # 13

According to best practice, when considering the location of PSM Connector servers in Privilege Cloud environments, where should the PSM be placed?

- A. near the target devices
- B. near the CPM servers
- C. near the Users
- D. near the Vault (closer to the external internet connection)

Answer: A

Explanation:

According to best practice, when considering the location of PSM Connector servers in Privilege Cloud environments, the PSM should be placed near the target devices. This placement minimizes latency and maximizes performance by reducing the distance that data has to travel between the PSM servers and the devices they are managing. This is particularly important for maintaining high efficiency and response times during remote session management and operations, which are critical for the overall effectiveness of the Privilege Cloud environment.

NEW QUESTION # 14

You need to map an enterprise's Active Directory to Privilege Cloud Shared Services to enable users to log in to CyberArk through their LDAP credentials. What do you need to accomplish this? (Choose two.)

- A. Read-only domain user to facilitate the LDAP mapping
- B. Port 636 open to the Privilege Cloud back-end
- **C. Installation and configuration of the Identity Connector**
- **D. Trusted certificate for LDAP server installed on Identity Connector**
- E. Configuration of a Federated Domain on the Identity Platform

Answer: C,D

Explanation:

CyberArk documents that to provision/authenticate users based on on-prem directory services using LDAP with Shared Services, you must first install the Identity Connector.

CyberArk also states LDAP communication to the Identity Connector is over TLS/SSL, and during the TLS handshake the LDAP server must present an X.509 certificate, meaning the connector must be able to trust the LDAP/LDAPS certificate chain (i.e., a trusted certificate on the connector side is required for LDAPS trust).

Therefore, the correct choices are B (Identity Connector) and D (trusted LDAP server certificate on the connector).

Why the other options are not correct as stated:

* C is wrong because LDAPS (636) is between the Identity Connector and the domain controllers /LDAP server, not "opened to the Privilege Cloud back-end" directly.

* E is not required for LDAP credential login; federated domains are used for federation/SSO use cases, while LDAP mapping is handled via the connector + LDAPS trust.

* A (read-only domain user) is commonly used as the Bind DN/service account, but in the Shared Services LDAP requirement set here, the two must-have items that CyberArk calls out for enabling this path are the Identity Connector and the LDAPS certificate trust.

NEW QUESTION # 15

.....

You get a specific amount of time per day to study, you have a job, need to go to the office daily, and take time to relax from the hectic work schedule. So, planning a long study schedule is not possible. Some people study while traveling to the office, some prefer to check the office breaks and some even take it to late-night study especially when they are left with little time to prepare CyberArk CDE-CPC Recertification CPC-CDE-RECERT for certification exam. For this reason, we want to make your journey smooth by providing you with smart tips to make the most out of your CyberArk CDE-CPC Recertification CPC-CDE-RECERT study material for the CyberArk CDE-CPC Recertification CPC-CDE-RECERT certification programs and clear it in one go.

Test CPC-CDE-RECERT Engine: <https://www.latestcram.com/CPC-CDE-RECERT-exam-cram-questions.html>

There are customer service executives 24/7 for your convenience, and once CPC-CDE-RECERT : CyberArk CDE-CPC Recertification exam actual test has some changes, our experts group will immediately send a message to your mailbox plus corresponding updated version for free for one-year, CyberArk CPC-CDE-RECERT 100% Accuracy Otherwise, you will achieve nothing, CyberArk CPC-CDE-RECERT 100% Accuracy Online test engine can supports Windows / Mac / Android / iOS, etc., because it is the software based on WEB browser.

Two people one from Kansas, and one from the Bay Area) who Valid Test CPC-CDE-RECERT Braindumps were active posters in both the sexuality groups and the parenting groups started sending me private messages.
