Microsoft Power Platform Functional Consultant 認定 PL-200 試験問題 (Q270-Q275):

質問 # 270

You are creating Power Automate automations targeting Dataverse.

The automations must meet the following requirements:

- * Run a custom API created by a developer. The API performs an action against an existing Account row in the system.
- * Create three rows in Dataverse. If an error occurs when you create the second row, the first row must be deleted.
- * Run several create, update, and delete operations as part of a single transaction without writing custom code.
- * Run several complex operations targeting multiple rows in the system as part of a single transaction.

You need to configure the actions.

Which actions should you configure? To answer, move the appropriate actions to the correct requirements. You may use each action once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

Actions

- Add a new row.
- Perform a bound action.
- Perform an unbound action.
- Perform a changeset request.
