The high pass rate of our study materials means that our products are very effective and useful for all people to pass their exam and get the related certification. So if you buy the CCRN-Pediatric Study Materials from our company, you will get the certification in a shorter time.

## How much AACN CCRN-Pediatric: Critical Care Nursing Exam Cost

AACN CCRN-Pediatric nursing exams are in great demand nowadays. The cost of the exam for AACN member is USD 245, and the cost for the AACN non-member is USD 360.

## AACN Critical Care Nursing Exam Sample Questions (Q35-Q40):

### NEW QUESTION # 35

A stat abdominal x-ray reveals free air and a large loculated fluid collection presumed to be blood. The priority of care should be:

- A. Surgical intervention
- B. Nasogastric tube placement
- C. Platelet transfusion
- D. Vasopressin (Pitressin) therapy

**Answer: A**

Explanation:

Free air on abdominal x-ray indicates bowel perforation, and loculated fluid suggests hemoperitoneum or intra-abdominal bleeding. This is a surgical emergency, and the child requires immediate operative intervention to prevent further deterioration.

"Free intraperitoneal air and fluid suggest perforation and hemorrhage, which require emergent surgical exploration and correction to prevent peritonitis and shock." (Referenced from CCRN Pediatric - Direct Care: Gastrointestinal, Surgical Emergencies and Acute Abdomen)

### NEW QUESTION # 36

A child presents with a 5-day history of fever, cervical lymphadenopathy, strawberry tongue, joint pain, and elevated CRP/ESR. The nurse should anticipate an order for:

- A. Amphotericin B and ibuprofen
- B. Clindamycin and ketorolac
- C. Intravenous immunoglobulin and aspirin
- D. Vancomycin and acetaminophen

**Answer: C**

Explanation:

The classic symptoms of Kawasaki Disease include fever >5 days, mucocutaneous inflammation (strawberry tongue, conjunctivitis), lymphadenopathy, and elevated inflammatory markers. Standard treatment includes IVIG and high-dose aspirin to reduce coronary artery aneurysm risk.

"Kawasaki Disease is treated with IVIG and aspirin to control inflammation and reduce the risk of coronary artery aneurysms." (Referenced from CCRN Pediatric - Direct Care: Multisystem, Inflammatory Syndromes in Children)

### NEW QUESTION # 37

The parents of a teenager with terminal neuroblastoma are preparing to withdraw life-sustaining treatment. The parent states, "I would like their sibling to be here, but I'm not sure if that is a good idea." Which of the following is the best response by a nurse?

- A. "What concerns do you have about having the sibling present?"
- B. "Our child life therapist can help prepare the sibling for what will happen."
- C. "We require siblings to be a certain age. How old is the sibling?"
- D. "The medical team supports the presence of siblings during end of life."

**Answer: A**

Explanation:

In end-of-life situations, especially involving pediatric patients, psychosocial support must extend to the entire family. When a parent expresses uncertainty or ambivalence, the nurse's role is to facilitate open communication and explore parental concerns without imposing judgment or directives.

"Effective psychosocial care requires assessment of family readiness and emotional state. Nurses should encourage family expression of feelings and help clarify concerns before offering direction or education." (Referenced from CCRN Pediatric - Direct Care: Psychosocial Support and Palliative Care) By asking about the parent's concerns, the nurse promotes a therapeutic relationship and gains insight into the family's emotional and cultural dynamics, allowing further support or child life referrals as needed.

### NEW QUESTION # 38

A father of a 16 year old who has sickle cell anemia tells a nurse that his family is scheduled to go camping this summer. He asks what activity would be appropriate for his child. The nurse would suggest:

- A. Collecting logs to be use for campfire
- **B. Motorboat ride around the lake.**
- C. Biking around the lake
- D. Fresh water swimming

**Answer: B**

Explanation:

Explanation: The activity doesn't require high amount of oxygen. The goal is to prevent sickling, therefore activities which may lead to increased cellular metabolism and increased tissue hypoxia should be avoided.

### NEW QUESTION # 39

Ada, tells the nurse that she wants to begin toilet training her 22-month-old child. The most important factor for the nurse to stress to the mother is:

- A. Developmental level of the child's peers
- B. The mother's positive attitude
- C. Consistency in approach
- **D. Developmental readiness of the child**

**Answer: D**

Explanation:

Explanation: If the child isn't developmentally ready, child and parent will become frustrated. Consistency is important once toilet training has already started.

### NEW QUESTION # 40
