

# Realistic Reliable IdentityIQ-Associate Test Practice & Leading Offer in Qualification Exams & First-Grade IdentityIQ-Associate Latest Study Materials

The SurePassExams is one of the top-rated and trusted platforms that are committed to making the SailPoint IdentityIQ-Associate exam preparation simple, easy, and quick. To achieve this objective the SurePassExams is offering valid, updated, and easy-to-use SailPoint IdentityIQ-Associate Exam Practice test questions in three different formats. These three formats are SailPoint IdentityIQ-Associate exam practice test questions PDF dumps, desktop practice test software, and web-based practice test software.

## SailPoint IdentityIQ-Associate Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• User-Driven Requests: Explains how users submit access requests, what request types are available, and how QuickLink Populations control who can request what for whom.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Identity Modeling: Explains how identity data is structured and managed through IdentityCubes, identity attributes, groups, populations, and manager correlation.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Access Modeling: Covers how entitlements and roles are defined, cataloged, and assigned to identities within IdentityIQ.</li></ul>

## IdentityIQ-Associate Latest Study Materials | Latest IdentityIQ-Associate Exam Questions Vce

SailPoint training pdf material is the valid tools which can help you prepare for the IdentityIQ-Associate actual test. IdentityIQ-Associate vce demo gives you the prep hints and important tips, helping you identify areas of weakness and improve both your conceptual knowledge and hands-on skills. With the help of IdentityIQ-Associate study material, you will master the concepts and techniques that ensure you exam success. What's more, you can receive IdentityIQ-Associate updated study material within one year after purchase. Besides, you can rest assured to enjoy the secure shopping for SailPoint exam dumps on our site, and your personal information will be

## SailPoint Certified IdentityIQ Associate Exam Sample Questions (Q77-Q82):

### NEW QUESTION # 77

Does this statement accurately describe how roles are acquired by users in the default role model configuration?

The Perform Maintenance task adjusts role assignments to keep user access current.

- A. Yes
- B. No

**Answer: B**

Explanation:

No. In the default IdentityIQ role model, role acquisition and role recalculation are not handled by the Perform Maintenance task. Role assignment and detection are primarily evaluated during identity refresh processing. The Identity Refresh task can update IdentityCubes, evaluate role assignment rules or role profiles, refresh detected roles, process policy evaluations, and recalculate identity-related governance state. This is the mechanism that keeps role relationships aligned with current identity attributes and account access.

The Perform Maintenance task serves a different operational purpose. It is generally used for system maintenance and cleanup activities, not for determining whether a user should acquire or lose a role. It does not function as the default engine for adjusting role assignments based on changes such as department, job title, location, lifecycle state, or account entitlements.

Therefore, the statement is inaccurate. Keeping role acquisition current is associated with identity refresh and role evaluation logic, not the Perform Maintenance task.

Reference topics: Access Modeling, business roles, IT roles, role assignment, detected roles, Identity Refresh task, IdentityCube recalculation, and Foundational Concepts: tasks versus workflows.

#### **NEW QUESTION # 78**

Can this method be used to include entitlements or groups in the Entitlement Catalog?

Mark an attribute as multi-valued in the application schema and run an account aggregation.

- A. Yes
- B. No

**Answer: B**

Explanation:

No. Marking an attribute as multi-valued does not, by itself, cause IdentityIQ to treat that attribute as an entitlement or include its values in the Entitlement Catalog. In an application schema, the multi-valued setting only indicates that the account attribute can contain more than one value. It describes data structure, not governance meaning.

To include access values in the Entitlement Catalog, the relevant schema attribute must be configured as an entitlement-bearing attribute, or group objects must be properly configured and aggregated through the application's group schema where applicable.

IdentityIQ then recognizes those values as governable access rights and can represent them as managed attributes in the Entitlement Catalog. Once cataloged, they can be reviewed, certified, requested, described, owned, risk-scored, and governed by policy.

For example, an account attribute such as "groups" may be multi-valued, but IdentityIQ must also know that those values represent access rights. Without entitlement configuration, the aggregation stores attribute values on the account but does not properly model them as catalog entitlements.

Reference topics: Access Modeling, Entitlement Catalog, managed attributes, application schema attributes, entitlement attribute configuration, group schema, and account aggregation.

#### **NEW QUESTION # 79**

Is this statement true for the use of tasks?

They are used to automate the processes to build, update, and maintain the information contained within IdentityIQ.

- A. Yes
- B. No

**Answer: A**

Explanation:

Yes. In SailPoint IdentityIQ, tasks are used to automate repeatable system processes that build, update, and maintain IdentityIQ data. Tasks are executable operations that can be run manually or scheduled to run at defined intervals. They are commonly used for core operational activities such as account aggregation, group aggregation, identity refresh, role processing, certification generation support, report execution, data maintenance, and other background processing.

This statement accurately describes the purpose of tasks because much of IdentityIQ's governance model depends on current and processed data. For example, aggregation tasks bring account and entitlement data from applications into IdentityIQ. Identity Refresh tasks update IdentityCubes, calculate role assignments, process lifecycle events, evaluate policies, and refresh identity

attributes. Maintenance tasks help keep stored information consistent and usable.

Tasks differ from workflows because tasks are primarily system-executed jobs, while workflows coordinate business processes, approvals, provisioning logic, and human interaction. Therefore, tasks are correctly described as mechanisms that automate the operational processes used to build, update, and maintain information inside IdentityIQ.

Reference topics: Foundational Concepts, tasks versus workflows, aggregation tasks, identity refresh, IdentityCube maintenance, application data processing, and system automation.

### NEW QUESTION # 80

Is this an accurate statement about the selection of a connector as part of an application definition?

Hostname is a required connectivity setting, regardless of the connector type selected.

- A. Yes
- B. No

**Answer: B**

Explanation:

The statement is false. In SailPoint IdentityIQ, connectivity settings are determined by the connector selected for the application definition. An application represents an authoritative source, target system, or managed resource, and the connector defines how IdentityIQ communicates with that system. Because different connectors use different communication models, their required configuration fields are not universal.

For example, an LDAP or Active Directory connector commonly requires server connection details such as host, port, credentials, and search base configuration. A JDBC-based connector may require a JDBC URL, driver class, database credentials, and SQL-related configuration. A delimited file connector does not require a hostname because it reads account and entitlement data from a file location rather than connecting to a network service. Similarly, cloud or API-based connectors may require endpoint URLs, tokens, client credentials, or tenant-specific settings instead of a simple hostname field.

Therefore, hostname cannot be considered a required connectivity setting for every connector type. Required settings are connector-dependent and appear according to the selected connector's configuration model.

Reference topics: Applications, connector selection, application definition, connector-dependent settings, schema configuration, and aggregation prerequisites.

### NEW QUESTION # 81

Does this statement accurately describe how roles are acquired by users in the default role model configuration?

Business roles can only be requested by managers.

- A. Yes
- B. No

**Answer: B**

Explanation:

No. This statement does not accurately describe role acquisition in IdentityIQ. Business roles are not restricted to being requested only by managers. In IdentityIQ, roles may be acquired through role assignment logic, role detection, access requests, or administrative action, depending on the role configuration and the organization's request model.

A business role commonly represents access associated with a business function, job, department, location, or organizational responsibility. Users may receive business roles automatically when their identity attributes satisfy configured role profiles or assignment rules, typically recalculated during Identity Refresh. Separately, roles may be made requestable through Lifecycle Manager and exposed through QuickLinks, where request eligibility is controlled by QuickLink Populations, request configuration, and workflow rules.

Managers may be allowed to request roles for direct reports, but that is only one possible configuration.

IdentityIQ can also allow users to request roles for themselves, allow delegated requesters to request for others, or restrict requests to specific populations.

Therefore, "only requested by managers" is too narrow and incorrect. Reference topics: Access Modeling, business roles, role assignment, role detection, Identity Refresh, User-Driven Requests, QuickLink Populations, and role request configuration.

### NEW QUESTION # 82

.....

The users can instantly access the product after purchasing it from SurePassExams IdentityIQ-Associate, so they don't have to wait to prepare for the SailPoint IdentityIQ-Associate Exams. The 24/7 support system is available for the customers, so they can contact the support whenever they face any issue, and it will provide them with the solution. Furthermore, SurePassExams offers up to 1 year of free updates and free demos of the product.
