Die Schulungsunterlagen zur Microsoft DP-203 Zertifizierungsprüfung aus Zertpruefung sind nicht nur echt, sondern auch preiswert. Nach dem Kauf unserer Prüfungsmaterialien werden Sie einjährige Aktualisierung genießen. Sie können einen Teil von den kostenlosen originalen Fragen herunterladen, bevor Sie die Schulungsunterlagen zur Microsoft DP-203 Zertifizierungsprüfung aus Zertpruefung kaufen. Wenn Sie die Microsoft DP-203 Prüfung nicht bestehen oder die Schulungsunterlagen zur Microsoft DP-203 Zertifizierungsprüfung irgend ein Problem haben, geben wir Ihnen eine bedingungslose volle Rückerstattung.

Wenn Sie finden, dass eine große Herausforderung in Ihrem Berufsleben vor Ihnen steht, so müssen Sie die Microsoft DP-203 Zertifizierungsprüfung bestehen. Zertpruefung ist eine echte Website, die umfassende Kenntnisse zur Microsoft DP-203 Zertifizierungsprüfung besitzt. Wir bieten exklusive Online-Microsoft DP-203 Prüfungsfragen und Antworten. So ist es ganz leicht, die Prüfung zu bestehen. Unser Zertpruefung bietet Ihnen 100%-Pass-Garantie. Zertpruefung ist als Anführer der professionalen Zertifizierung anerkannt. Sie bietet die umfangreichste Zertifizierungsantworten. Sie werden feststellen, dass die Microsoft DP-203 Prüfungsfragen und Antworten zur Zeit die gründlichste, genaueste und neueste Praxis sind. Wenn Sie die Microsoft DP-203 Prüfungsfragen und Antworten haben, werden Sie sicher mehr sicher sein, die Prüfung zum ersten Mal zu bestehen.

DP-203 Testking - DP-203 Zertifikatsdemo

Um die Microsoft DP-203 Zertifizierungsprüfung zu bestehen, brauchen Sie eine ausreichende Vorbereitung und eine vollständige Wissensstruktur. Die von Zertpruefung gebotenen Microsoft DP-203 Ressourcen würden Ihre Bedürfnisse sicher abdecken.

Microsoft Data Engineering on Microsoft Azure DP-203 Prüfungsfragen mit Lösungen (Q255-Q260):

255. Frage

You have an Azure subscription that contains a Microsoft Purview account named MP1, an Azure data factory named DF1, and a storage account named storage1. MP1 is configured

10 scan storage1. DF1 is connected to MP1 and contains 3 dataset named DS1. DS1 references 2 file in storage.

In DF1, you plan to create a pipeline that will process data from DS1.

You need to review the schema and lineage information in MP1 for the data referenced by DS1.

Which two features can you use to locate the information? Each correct answer presents a complete solution.

NOTE: Each correct answer is worth one point.

- A. the search bar in Azure Data Factory Studio
- B. the search bar in the Azure portal
- C. the Storage browser of storage1 in the Azure portal
- D. the search bar in the Microsoft Purview governance portal

Antwort: A,D

Begründung:

Explanation

The search bar in the Microsoft Purview governance portal: This is a feature that allows you to search for assets in your data estate using keywords, filters, and facets. You can use the search bar to find the files in storage1 that are referenced by DS1, and then view their schema and lineage information in the asset details page12.

The search bar in Azure Data Factory Studio: This is a feature that allows you to search for datasets, linked services, pipelines, and other resources in your data factory. You can use the search bar to find DS1 in DF1, and then view its schema and lineage information in the dataset details page. You can also click on the Open in Purview button to open the corresponding asset in MP13. The two features that can be used to locate the schema and lineage information for the data referenced by DS1 are the search bar in Azure Data Factory Studio and the search bar in the Microsoft Purview governance portal.

The search bar in Azure Data Factory Studio allows you to search for the dataset DS1 and view its properties and lineage. This can help you locate information about the source and destination data stores, as well as the transformations that were applied to the data. The search bar in the Microsoft Purview governance portal allows you to search for the storage account and view its metadata, including schema and lineage information. This can help you understand the different data assets that are stored in the storage account and how they are related to each other.

The Storage browser of storage1 in the Azure portal may allow you to view the files that are stored in the storage account, but it does not provide lineage or schema information for those files. Similarly, the search bar in the Azure portal may allow you to search for resources in the Azure subscription, but it does not provide detailed information about the data assets themselves.

What is Azure Purview?

Use Azure Data Factory Studio

256. Frage

You have an Azure Synapse Analytics dedicated SQL pool named SA1 that contains a table named Table1.

You need to identify tables that have a high percentage of deleted rows. What should you run?

- A. 
- B. ☐
- C. ☐
- D. ☐

Antwort: C

257. Frage

You need to ensure that the Twitter feed data can be analyzed in the dedicated SQL pool. The solution must meet the customer sentiment analytics requirements.

Which three Transaction-SQL DDL commands should you run in sequence? To answer, move the appropriate commands from the list of commands to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Commands

CREATE EXTERNAL DATA SOURCE
CREATE EXTERNAL FILE FORMAT
CREATE EXTERNAL TABLE
CREATE EXTERNAL TABLE AS SELECT
CREATE DATABASE SCOPED CREDENTIAL

Answer Area

Antwort:

Begründung:

Explanation

Scenario: Allow Contoso users to use PolyBase in an Azure Synapse Analytics dedicated SQL pool to query the content of the data records that host the Twitter feeds. Data must be protected by using row-level security (RLS). The users must be authenticated by using their own Azure AD credentials.

Box 1: CREATE EXTERNAL DATA SOURCE

External data sources are used to connect to storage accounts.

Box 2: CREATE EXTERNAL FILE FORMAT

CREATE EXTERNAL FILE FORMAT creates an external file format object that defines external data stored in Azure Blob Storage or Azure Data Lake Storage. Creating an external file format is a prerequisite for creating an external table.

Box 3: CREATE EXTERNAL TABLE AS SELECT

When used in conjunction with the CREATE TABLE AS SELECT statement, selecting from an external table imports data into a table within the SQL pool. In addition to the COPY statement, external tables are useful for loading data.

Reference:

<https://docs.microsoft.com/en-us/azure/synapse-analytics/sql/develop-tables-external-tables>

258. Frage

You have an Azure Data Factory instance named ADF1 and two Azure Synapse Analytics workspaces named WS1 and WS2. ADF1 contains the following pipelines:

P1: Uses a copy activity to copy data from a nonpartitioned table in a dedicated SQL pool of WS1 to an Azure Data Lake Storage Gen2 account

P2: Uses a copy activity to copy data from text-delimited files in an Azure Data Lake Storage Gen2 account to a nonpartitioned table in a dedicated SQL pool of WS2

You need to configure P1 and P2 to maximize parallelism and performance. Which dataset settings should you configure for the copy activity if each pipeline? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Antwort:

Begründung:

Reference:

<https://docs.microsoft.com/en-us/azure/synapse-analytics/sql/load-data-overview>

259. Frage

You have an Azure subscription that contains an Azure Cosmos DB database. Azure Synapse Link is implemented on the database. You configure a full fidelity schema for the analytical store. You perform the following actions:

How many columns will the analytical store contain?

- A. 0
- **B. 1**
- C. 2
- D. 3

Antwort: B
